With regard to the Cape Colonists and Natali- ans who had been in rebellion Lord Milner read a statement on behalf of the Imperial Government that they would be left to be dealt with by the colonial governments according to their laws, and the Irish and other British subjects who had fought with the Boers would be subject to trial under the law of that part of the British Empire to which they belong. He also stated the views indicated by the Cape Government as to the terms to be granted to Cape Colonists in the field or such as had surrendered since April 12, 1901. With regard to the rank and file, on giving up their arms, they should sign a document acknowledging themselves guilty of high treason; their punishment would be, provided they had not been guilty of murder or acts contrary to the usages of war, that they should not be entitled during their lives to vote at any parliamentary or local elec- tion. Justices of the peace, field-officers, or other colonial officials and all Cape Colonists who had been commandants of rebel or British troops, would be tried for high treason, but in no case should the death penalty be inflicted. The opinion communicated by the Natal Government was that rebels should be dealt with according to the law of the land.
The Boer generals Louis Botha, Christian de Wet, Delarey, and Lucas Meyer went to Europe soon after, with Paul Kruger, Dr. Leyds, and the Boer delegates Wolmarans, Fischer, and Wessels. They had a conference with Mr. Chamberlain and endeavored to secure from the British Government an allowance or annual grant for the support of widows and orphans ofburgers and maimedburgers unable to work; also the equality guaranteed in the peace convention of the Dutch and English languages in schools and law courts; the restoration of farms confiscated and sold under the proclamation of Aug. 7, 1901, the repatriation of all the proscribed leaders, amnesty for all persons who fought with the Boers, pardon for persons convicted of acts committed in connection with the war, the reinstatement of officials of the republics or compensation of all private persons for property seized or destroyed by British troops, and for use of properties taken possession of, the reconsideration of the decision to annex the Transvaal and Orange Free State to Natal, and the recognition as lawful obligations of the debts incurred by the republics during as well as before the war. The Colonial Secretary declined to reopen the subject in his reply. The generals visited other countries and appealed to the public of the Continent of Europe and of the United States to assist the widows and orphans of the Boers.

Cape Colony.—The colony of the Cape of Good Hope has responsible government. The legislative authority is vested in a Parliament consisting of a Legislative Council of 23 members elected for seven years and a Legislative Assembly of 95 members elected for five years by the registered electors, who must be able to write their names, and occupations and are qualified by the occupation of a house worth £70, or the receipt of a salary of £50. Speeches in Parliament may be made in either English or Dutch. The Governor of Cape Colony is Sir Walter F. Hely-Hutchinson. The colonial council at the beginning of 1902 was composed as follows: Prime Minister and Treasurer, Sir Gordon Sprigg; Colonial Secretary, T. L. Graham; Attorney-General, Sir J. B. Pass; Colonial Secretary, Sir C. S. L. Smarrt; Secretary for Agriculture, Mr. Pieter Fauè; without portfolio, J. Frost. The appointment of Sir J. Rose-Innes as Chief Justice of the Transvaal was confirmed by the Cabinet. Mr. Graham on Feb. 19, 1902, became Attorney-General, and Mr. Douglass succeeded the latter as Colonial Secretary.

The colony has an area of 21,311 square miles, with 375,897 white and 1,150,237 colored inhabitants at the last census. Of the white population, 27,667 are of English, 6,466 of Scottish, 4,194 of Irish, and 5,840 of German birth, and over 325,000 were born in South Africa. The colored population consists of Hottentots, Kafirs, Fingoes, Bechuanas, Malayo, and mixed races. The number of marriages in 1901 was 2,350; the births among Europeans were 15,195 and deaths 8,480 in number; births among the rest of the population 37,376 and deaths 38,889. The number of arrivals by sea was 23,948 and departures 21,193.

The total estimated population of the colony on Jan. 1, 1901, was 2,350,000.

The revenue for the year ending June 30, 1900, was £21,065,592 from taxation, £23,669,02 from railroad and other services, £2,077,424 for railroads, £223,429 for defense, £564,306 for police and prisons, £1,917,347 for civil establishments, £2,000,000 for education. The debt of the colony on Jan. 1, 1900, amounted to £31,409,755, including £23,525,67 raised by harbor boards with a Government guarantee. The revenue of the divisional councils in 1900 amounted to £187,493, and expenditure to £268,901; debts, £23,640. The revenue of municipalities footed up £942,317, and expenditures £922,992; debts, £2,306,105.

Cape Colony in the year ending May 31, 1899, produced 2,220,847 bushels of wheat, 1,810,611 bushels of oats, 830,730 bushels of barley, 2,857,808 bushels of mealies, 2,000,000 bushels of Kaffir corn, 304,491 bushels of barley, 4,820,432 gallons of wine, 1,107,344 gallons of brandy, 35,179,900 pounds of wool, 6,707,379 pounds of mohair, 278,171 pounds of ostrich-feathers. The live stock consisted of 387,824 horses, 90,379 mules and asses, 1,263,992 sheep, 5,572,793 goats, 245,947 hogs, and 260,672 ostriches.

The total value of imports in 1900 was £19,675,336, of which £16,106,847 represent merchandise. The exports of colonial produce were valued at £7,042,358; total imports, £28,147,670. The exports of wool, £9,907,091, value of ostrich-feathers, £375,801; of wool, £837,809; of copper ore, £498,552; of Angora hair, £389,905; of hides and skins, £349,300; of gold from the Transvaal, £236,755; of coffee, £29,841; of grain and meal, £24,175. The exports of diamonds from 1887 amounted to £36,447,399.

The chief imports were food and drink of the value of £5,254,880, and and the goods and materials of the value of £4,301,331. The imports of Cape wool into Great Britain in 1900 were 37,485,754 pounds, against 84,032,536 pounds in 1899. Of the total value of imports in 1900 Great Britain sent £11,062,428, and received £8,584,175 of the exports, British possessions furnished £2,471,692 of imports and took £2,389,047 of exports, foreign countries furnished £2,531,691 of imports and took £2,554,490 of exports.

The number of vessels entered from abroad at the ports in 1900 was 1,655, of 4,083,465 tons; cleared, 1,506, of 4,701,536 tons. Of those entered 1,188, of 4,300,656 tons were British, of those cleared 1,165, of 4,292,057 tons. The number of coasting-vessels entered was 1,266, of 4,006,933 tons; cleared, 1,266, of 4,169,581 tons.

The shipping registered in the naval register was received on Jan. 1, 1901, of 5 sailing vessels, of 331 tons, and 33 steamers, of 5,810 tons.

The Government owned 2,089 miles of railroads on Jan. 1, 1901, and operated 587 miles more owned and operated by companies and 139 miles were being built by companies with a Government subsidy. The Government railroad cost £21,842,000, or £10,456 per mile. The gross earnings in 1900 were £5,220,537; expenses, £2,158,205; number of passengers carried, 13,040,414 in 1900; tons of freight, 1,270,904.

The number of letters that passed through the post-office during 1900 was 31,112,004; newspapers, 11,587,990; postal cards, 806,632; books and samples, 1,520,025; receipts for the year, £3,542,431; expenses, £3,346,779.

The telegraph-lines had a length of 7,467 miles on Jan. 1, 1891, with 2,259 miles of wires. The number of messages in 1890 was 3,665,039; receipts were £202,454, and expenses £206,986.

In Cape Colony parliamentary government was suspended during two-thirds of the period of the war and for nearly the entire time until the Union was organized, and it was practically under military rule. Parlia-
ment was prorogued from one date to another. Some of the members had been convicted by mili-
tary courts, and sentenced to death, and elected, elections were not held to fill their places because none but men of the same principles could be elected in their districts. When peace was signed a petition was signed by a large majority of the members of Parliament belonging to the Progressive party, which was the ministerial party, begging the Imperial Government to sus-
PEND the Constitution. The Premier, who had assented to the military measures of the army authorities during the war and organized the bodies of Cape volunteers for local defense and auxiliary service in the war, rejected the propo-
sition from the start, the ministry refused to countenance it, and the Imperial Government finally decided against it and advised the conven-
ing of Parliament at an early date so as to test the willingness of the House of Assembly to pass the measures necessary for the main-
tenance of orderly government, including indem-
nity bills for acts committed under martial law and for unauthorized expenditure. Sir Gordon Sprigg assured Mr. Chamberlain that he could pass the budget, although high, he could not rely on the support of a fourth of his former followers. Dr. Smartt, Commissioner of Public Works, resigned in May and took the leadership of the supporters of suspension, and as 42 members of the Assembly supported him he practically displaced the Premier as head of the Progressive party. The Constitution was suspended by martial law and press cens-
sorship were still in force after the war ended. The Parliament had not been convened for eight-
een months, although the Constitution requires that twelve months shall not elapse without a session. The ministry had expended in the defense of the colony all the ordinary resources and £2,000,000 raised for railroads and harbors, and had no power to levy taxes. What the Pro-
gressives wanted was the repeal of the Constit-
tion. They proposed that the Cape should be ruled as a Crown colony until the seats could be filled, and, of such a way as to give them, the active English Imperialist party, a majority.

The petition for the suspension of the Constitu-
tion was sent before the peace was signed. It came too late to give the new Imperial government an opportunity to cover obligation the whole period. The ministry and Parliament could not ignore, how-
ever, the wrongs that many were still suffering in consequence of martial law. The Legislative Council investigated the cases of two of its members who had been punished by military tribunals and found that they had been thoroughly loyal citizens. Many persons were still confined in prison under unjust and capricious sentences. The Royal Commission, composed of Baron Alver-
stone, Lord Chief Justice of England, Justice John C. Bingham, and Sir John Ardagh, exam-
ined into 721 cases tried in Cape Colony, 59 in the Transvaal and Orange River colonies, and 14 in Natal, and in accordance with its recommenda-
tions 119 prisoners were released at once, and in most other cases sentences were reduced or the sentence to one or two years—and fines were remitted.

The financial indemnity bill covered a total un-
authorized expenditure of over £11,000,000. The Parliament authorized new loans of £4,400,000 for railroads and harbor works. The mini-
sters, supported by the Progressives, voted on Sept. 4 against 41 given by the Bank for enlarging the powers of school commissioners, yet all the indemnity bills were passed. The ex-
penditure for the two years ending June 30, 1900, was £19,224,000, and the revenue only £17,039,000, leaving a deficit of £2,184,000. For the next year

perial navy in addition to the previous annual
grant of £30,000. There were 9 seats vacated by
rebels or refugees in prison without trial, some had fled overseas to avoid a like fate, and
elections were not held to fill their places be-cause none but men of the same principles could
be elected in their districts. When peace

was signed a petition was signed by a large majority of the
members of Parliament belonging to the
Progressive party, which was the ministerial
party, begging the Imperial Government to sus-
PEND the Constitution. The Premier, who had

SOUTH AFRICA.

a revenue of £10,370,000 was expected, and a surplus of £258,000. The bonds of the Free State government were sold at £74,801, for £750,000. The railroad built by Cape Colony would pay the war cost of £1,800,000. The 3,457 rebels who surrendered under the proclamation of June 11, 1900, were disfranchised for life, in addition to 2,335 others convicted by the special tribunals constituted in 1900, besides whom 1,217 were convicted who were not voters. A bill provided for raising a loan of £1,250,000 for compensating war losses, first of those not found guilty of treason, and second of those found guilty, though not such as had twice rebelled. On Nov. 4 the Government was defeated on a bill to reorganize and augment the mounted troops of the colony by 34 votes to 29. In elections to fill the vacant seats Progressives were elected. The Afrikaner Bond changed its name to the South African party, and put forth as its program the realization of the unity of the different nationalities in South Africa and the federation of the South African colonies with due regard to their individual interests and the supremacy of the British Crown. Martial law was repealed on Sept. 17, and at the same time the peace preservation act was proclaimed, enabling the Government to control the possession of arms and requiring the registration of all arms and ammunition. In the new colonies the importation of arms was forbidden; only specially licensed persons could have them, those needing them for defense against natives; and no dealer could keep more than a certain small stock of ammunition. One of the causes of quarrel between the Premier and his party was that he would not duplicate this legislation in Cape Colony and introduce more stringent treason and sedition laws, but he insisted that existing laws were sufficient.

Bechuanaland.—The native territory west of the Transvaal and east of German Southwest Africa, extending northward to the Zambesi, belonging to the BAMANGWato under Khama and the BAKHATHA under Lenche, the BAKWENs under SEBELE, the Bangwakatse under Bathoen, and the BAMBALI under Ikanye, is a British protectorate over 110,476 square miles, or a total of 10,024,400 square miles. There is a European mounted police of 12 officers and 115 men and a native police of 66 men. The native population is about 143,800. The Resident Commissioner is W. SmitTHE. When British Bechuanaland, including the suppressed Boer Republic of the Orange Free State, was made a British protectorate in 1888, annexed to Cape Colony in 1874, and taken direct- ly under the authority of the Crown in 1884. It is administered by a Resident Commissioner, H. C. Sleoddy, under the High Commissioner's direction. Chiefs allied to the family of Mohesh hold authority in the wards into which the 7 districts are subdivided. European settlement on the land is not allowed. There were 674 European officials and servants, 2,063,500 natives, who grow meailes, wheat, and a variety of live stock. There were 81, 194 horses and 320,934 cattle. The police force consists of 21 Europeans and 238 natives. The revenue in 1901 was £2,258,000, including £13,000 in duty on tobacco, £11,000 in custom duties, £8,000 in license duties, and £5,000 in other taxes. The exports, consisting of grain, wool, horses, and cattle, amounted to £38,147.

The British authorities had difficulties with the Basutos during and after the war. The young chief, Joel, offered to make common cause with the Boers, but was told it was a white man's war. He nevertheless gave them valuable assistance in food and horses, and his men served them on their farms and in the field. After the war the British proposed to try him for treason. Lethorodi, the paramount chief, demurred, but he was arrested and tried at Maseru, and sentenced to pay a fine in cattle and spend a year in prison.
natives. The live stock of the Europeans consisted of 29,222 horses, 202,501 cattle, 530,754 sheep, and 202,501 goats; the natives numbered 54,874 horses, 145,409 cattle, 55,701 sheep, and 331,554 goats. The output of coal for 1900 was 241,530 tons, only from June, when the British recaptured the mines. Iron-mining has begun, and copper has been found in the north. The total value of imports in 1900 was £3,789,104, and of exports £4,172,097. About 63 per cent. of the imports come from Great Britain, but in 1900 only 17 per cent. of the exports went to Great Britain. The imports of machinery were £268,062; of dry-goods, £209,344; of clothing, £374,711; of iron manufactures and hardware, £208,342; of flour and grain, £287,707; of wine, ale, and spirits, £220,000; of leather manufactures, £191,071; of cotton goods, £85,800; of woolen goods, £40,136. The number of merchant vessels entered in 1900 was 664, of 1,318,885 tons; cleared, 641, of 1,296,488 tons. Of those entered 106, of 165,887 tons, came direct from Great Britain and 354, of 906,500 tons, came from Cape Colony, of which 330, of 786,483 tons, came from Great Britain; of those cleared 53, of 111,255 tons, sailed direct for Great Britain and 254, of 567,863 tons, for Cape Colony. The length of the railway in 1902 was 832 miles, all operated by the Government, and all, except 60 miles in Zululand, owned by the Government. The main line from Durban through Pietermaritzburg to the naval base at Tugela Mills, connects the line to Johannesburg and Pretoria. The branch from Glencoe to the Buffalo river is to be extended to Vryheid. The capital cost of the railway was £7,056,291. The receipts in 1900 were £1,242,280, and expenses £901,069. The net receipts were equal to 4.49 per cent. on the capital.

The British Government, according to the request of the Natal Parliament, annexed to Natal the Transvaal districts of Vryheid and Utrecht, but refused to add the districts of Piet Retief and Wakkerstroom and the Harrismith and Vrede districts of the Orange River Colony.

Orange River Colony.—The annexation of the Orange Free State to the British Empire under the name of the Orange River Colony was proclaimed on May 24, 1900, after the occupation of Bloemfontein, the capital, by the British forces. The entire territory was still under military administration in the beginning of 1902. The British Government promised to restore civil government as soon as circumstances would permit. Lord Milner was appointed Governor of both the Orange River Colony and the Transvaal, and Brig.-Gen. H. J. Goold-Adams Lieutenant-Governor under him of the Orange River Colony.

The area of the colony when the annexation was declared was 48,326 square miles, with a population in 1891 of 77,716 whites and 129,787 natives. Of the whites 10,761 were farmers, and of the colored 41,817 were servants of the whites. The normal revenue in time of peace was estimated by Sir David Barbour, appointed by the British Government to investigate the financial resources of the conquered territories, at £740,000, and expenditure at £494,000. The British administrators calculated for 1902, on the basis of a restoration of peace, on a revenue of £756,200, and an expenditure of £691,140, including £300,000 for the South African constabulary. The receipts of the British revenue from May 24, 1900, to June 30, 1901, were £402,925; but the civil revenue was £301,800, of which £151,000 came from customs, £43,630 from the post-office, £29,000 from the mining returns, and £10,100 from the native poll-tax. The total expenditure for the same period was £356,038, the expenditure for purely civil purposes £217,574.

The revenue of the Boer Government in 1898 was £799,758, including £408,578 from railways, and the expenditure was £565,712, including £508,475 for railways. For 1899 the revenue was estimated at £566,914, and expenditure at £248,523. The Government in 1899 had a debt of £30,000, exclusive of the debt to the Cape Government for building the railroad, while it owned £70,000 of stock in the national bank and possessed telegraphs, etc., worth £496,381. The Government lands had an area of 565,000 acres. The Boers raised sheep, horses, cattle, and ostriches and cultivated grain, although much of the land is too dry for agriculture. There are extensive coal-fields and diamond-fields which yielded £1,508,681 in 1898. The Transvaal is settled by colonists in farms in the conquered districts and furnished them with implements, stores, and breeding stock with the object of checking Boer influence and restocking the country with animals. Large tracts in the Ficksburg and Thaba Nchu districts were acquired with the object of dividing them among British settlers.

The total value of the imports in the Cape Colony or Natal except cereals from Bauroland, which are consumed or re-exported to the Transvaal, as also Bauro cattle and tobacco, is £3,788,555 from Bauroland, and £485,655 from the South African Republic. Of £1,923,425 of exports in 1898 the value of £849,540 came from Cape Colony, £229,029 from Bauroland, and £485,655 from the South African Republic. Of £1,923,425 of exports £910,298 went to the South African Republic, £280,467 to Cape Colony, £147,177 to Natal, and £45,495 to Bauroland. The length of the Government railroad, traversing the country and connecting the Transvaal mines and towns with the Cape network, is 392 miles, built at a cost of £2,771,945. The telegraphs in the colony have 1,489 miles of line, with 1,750 miles of wire, besides 420 miles of line and 1,119 miles of wire on the railroad.

The Transvaal.—The South African Republic after the occupation of Pretoria by British troops was declared on Sept. 1, 1900, to be annexed to the British dominions under the name of the Transvaal Colony. Sir Alfred Milner, created Lord Milner, was appointed Governor-in-Chief of the Transvaal and the Orange River Colony, being replaced as Governor and Commander-in-Chief of Cape Colony by the Governor of Natal, but retaining the office of High Commissioner for British South Africa.

The area of the Transvaal is 119,139 square miles. The imperfect census of 1896 gave the population as 245,297 whites and the colored population was estimated at 622,500. An official estimate of 1898 made the colored population 748,739, raising the total to 1,394,186. Pretoria, the capital, had about 10,000 inhabitants at the time of the census. The capital was 1,022,078, of whom 50,907 were white, 42,533 Kafirs, 4,807 Indians and Chinese, 993 Malays, and 2,879 of mixed race. The revenue of the Republican Government in 1899 was £3,963,560, and expenditure £3,971,473. For 1899 the revenue was estimated at £3,087,362, and expenditure at £3,051,239. Sir David Barbour, in a report of 1899 on the finances of the Transvaal Colony, estimated the future revenue at £3,341,920, and expenditure at £2,907,121. From customs a revenue of £1,100,000 is expected to be obtained from a tax of 1s. 6d. per cwt. on tobacco from the Netherlands Railroad Company's line
to Delagoa Bay, £375,000; from prospecting and investigating, £35,000. From the post-office, £135,000; from taxes on natives, £110,000.

The Boer Government imposed a poll-tax of £2 on all adult male natives except those living with white people as servants, also a native hut-tax of 10s. The chief expenditures as estimated by Sir D. Barbour were £262,788 for public works, £383,480 for police and prisons, £344,220 for posts and telegraphs, and £200,000 for education.

The receipts under British administration, with balances left in bank by the late Government, were almost sufficient to defray the expenses of civil administration, exclusive of the Boer concentration camps and the constabulary, so that from an advance of £1,500,000 voted by the British Parliament for the Transvaal and Orange River Colonies only £250,000 were required by the Transvaal. The debt left by the South African Republic amounted to £2,863,394 on Jan. 1, 1899. The Government owns lands in the gold-fields of the Rand and the whole of the Barberton gold-fields, valued at millions of pounds sterling.

Several parts of the Transvaal are well adapted for agriculture, but not more than 50,000 acres are cultivated, and a bulk of vegetable foods must be imported. Cattle and sheep were kept on the great farms of the Boers. There were 12,245 farms in 1898, of which 2,861 belonged to the Government, 4,102 to the hands of non-resident owners and companies, and 7,772 were owned by Boers. Gold was first produced in the Transvaal in 1884 in small amounts for the first year, a total production of £947,415 in 1888, and rising to £16,044,135 in 1895, after which the war interrupted regular mining operations. The entire production up to the end of that year was £80,845,000. In 1899 the mines of the Witwatersrand produced 4,086,066 ounces. From the beginning of October, 1899, to the end of March, 1900, the Republican Government operated the Rand mines, taking out 251,677 ounces in the first quarter of 1900. Then mining ceased until operations were resumed in May, 1901, by 8 companies, which in six months extracted only £848,012 worth.

New regulations framed by the British authorities are intended to protect the native laborers from fraud and oppression, and to suppress the illegal liquor traffic. Labor agents and overseers of many farms are obliged to take out licenses. The passport regulations have been made tighter for natives, and labor contracts can not be made with them unless approved by the native commissioner for a longer period than one year. There were about 13,000 whites and 77,000 natives employed in the mines of the Witwatersrand in the beginning of 1899.

Diamonds are found near Pretoria and in other parts of the Transvaal. In 1898 the value of £43,730 was produced. Copper, silver, and lead exist, and good coal is mined in the neighborhood of the gold-fields. In 1898 the output was 1,907,808 tons, valued at £608,348.

The dutiable imports in 1898 were valued at £10,632,985. In 1899 the value was £3,535,340; in the year ending June 30, 1900, until the war interrupted trade, £737,356. Under the British administration the imports for the first six months of 1901 were £2,143,192, exclusive of supplies for the army and munitions of war, and supplies for the railways or the Government. The chief articles were dry-goods, clothing, boots and shoes, preserved meats, groceries, flour, butter, condensed milk, sugar, preserved fruits, wines, mead, wicker, cloth, hats, cigarettes, cigars, and smoking tobacco.

The length of railroads completed in the Transvaal in 1898 was 774 miles, and 270 miles were under construction. The gauge of the lines is of 2,600 miles, with 6,636 miles of wire.

The Rand mines were opened gradually as the military authorities allowed the refugees from Johannesburgh to return. Permission was given for 450 stamps before the end of 1901, and in July 2,000 stamps were working. During the war the Boer Government operated some of the mines until their evacuation of Johannesburgh, and from these the veins and trains the Boers obtained £2,700,000 of gold, besides which the mines sustained direct losses from the war amounting to £3,400,000. Capital did not flow readily to Johannesburg, and there was a fall in mining shares after the peace and the reopening of the mines owing to uncertainty as to the part of the war debt that the British Government meant to make the mining industry bear. The cost of living was higher than it ever had been. The railroad tariffs, customs duties, and other taxes were as high or higher. Before the war the Republican Government imposed a direct tax of 5 per cent. on the profits of mines, promising to refund excise duties, custom duties, and customs duties. Lord Milner abolished duties on building materials, machinery, and other articles needed for the rapid development of the country, and American machinery, structural steel, and timber were sold in quantities auguring a recovery of enterprise. The labor difficulty affected mining more than anything else. The black laborers that were scattered were scattered. The chiefs in the northern Transvaal furnished some. The Basutos were employed mostly in transport. The Government employed other blacks on the railroads that were being constructed to Thaba Nchu and Vereeniging. The mines obtained no considerable supply until an arrangement was made with the Portuguese authorities for natives from the coast territories. On inquiry it was found that there were not half enough blacks in all South Africa for the mines, farms, and other industries. White labor was tried in some mines, but was found unprofitable.

The restoration of theburghers to their farms with their families in the concentration camps was a slow business. The Boers had many complaints to make of the way in which the burghers were treated. Tools, stock, material for houses, seed, and provisions were to be furnished from the fund of £3,000,000, but this was administered in a way that did them little good. Every effort was made to keep the burghers from spreading out and to keep them on their farms. If they were found by the military authorities to have spread out, they were told that they must return to their farms, and if they refused, the burghers were not to be given the right to vote. The burghers' rights of property, etc., were taken away, and the burghers were not allowed to be engaged in any occupation except farming.

Martial law was not withdrawn until Nov. 19, and it was succeeded by an indemnity and peace preservation act confirming all acts and sentences of the courts-martial, empowering the authorities to arrest and detain without a warrant persons suspected of sedition and to expel from the country persons considered dangerous to the peace, and requiring permits to be taken out by anyone wishing to enter the country, which would not be granted to burghers unless they take the oath of allegiance or make the equivalent declaration. The Boer generals complained to Mr. Chamberlain that under the peace convention the oath of allegiance could not be required. The Boers of the byzouner class who had no land or capital of their own, by arrangement with the landowners, received small farms on lease and were assisted by the Government, laborers, and farm animals. The Transvaal was nearly demobilized of live stock excepting the remaining draft-ozen used in transport. Cattle
for restocking the farms were brought from Madagascar and other countries by the Government, and Boers were allowed to go to Cape Colony to buy breeding stock. Lord Milner had a plan for settling British farmers on irrigated farms of 20 acres or more and grazing farms of 2,000 or 3,000 acres. Excepting some of the discharged soldiers, no settlers were found suitable to form colonies, nor could they be started until large sums had been spent on irrigation works for the agricultural colonies. The Government possessed large tracts of land and also many town lots. The most valuable undeveloped mining lands in the country belonged to the Government. Those whose capabilities were known had been promised by the Government to the miners, to be apportioned by lot. The lands next to the Rand mines under which the ledges ran far below the surface were promised to the mining companies at a fixed price. Mr. Chamberlain disappointed the miners and prospectors when he intimated that the Government would not, like the Republican Government, give away such valuable assets in the future, and the opinion of the mining community was that unless prospectors were allowed to explore the territory, and pay a pegging fee, allowed to peg claims no one would explore new territory for gold. The Government increased the tax on mining profits from 5 per cent. to 10 per cent. Lord Milner was perplexed by the financial difficulties that beset him. He endeavored to induce the Cape and Natal governments to abolish the duties on mealies and other foodstuffs imported from the United States, and to free the shipping of the Cape Colony from an overseas competition and also to reduce their railroad tariffs. When they refused he intimated to the Cape Commissioner of Public Works that the military worries might be restored in Cape Colony. The freight in the Transvaal sections of the railroads is twice as high as on the Cape and Natal railroads, and he could not reduce that without a deficit in his budget. The South African freights are the main cause of the dearness of living in the Transvaal. Goods transported 1,500 miles in the United States and thence by steamer pay rates for shipping from Johannesburg than the rail and ocean freights to Delagoa Bay. The estimate of revenue for the Transvaal for the year ending June 30, 1903, is 10.3 million pounds sterling. Sir Arthur Lawley was appointed Lieutenant-Governor of the Transvaal under the High Commissioner and entered upon office on Sept. 1, 1903.

The Territory of the British South Africa Company, originally £1,000,000, has been successively increased to £4,375,000 of stock and £1,250,000 of debentures. The revenue, derived from mining, trading, and professional licenses, business stands, and the postal and telegraph services, amounted to £469,000, and expenditures, including supplementary estimates, to £735,589. The regions covered by the charter of the British South Africa Company have a total area of over 1,000,000 square miles, of which 300,000 lie south and 700,000 north of the Zambezi river. The division bounded by 22° of south latitude and the Limpopo on the south and the Zambezi on the north, known as Southern Rhodesia, embracing Matabeleland and Mashonaland, has an area of 144,000 square miles. The population of Matabeleland in May, 1901, comprised 4,021 Europeans, 187 Asians, and 328,729 natives. The population of Mashonaland comprised 7,011 Europeans, 900 Asiatics and telegraph systems of Cape Colony. The sphere over which the administrative powers and commercial privileges were extended, after the agreement to which Portugal, yielding to superior force, subscribed on June 11, 1891, embraced all the regions north of the Transvaal and Cape Colony and south of the Congo State and German East Africa, west of the territories of Mozambique and Lourenço Marques left to Portugal and east of the Portuguese colony of Angola and German Damaraland and Namaland. British Bechuana-land was subsequently annexed to Cape Colony, the British Central African Protectorate obtained the right to retain its separate administration, and the Bechuana-land Protectorate was placed under the immediate direction of the High Commissioner. On Nov. 25, 1898, after Dr. Jameson's raid from Matabeleland into the Transvaal, a new scheme of government was promulgated. A Resident Commissioner is appointed by the Secretary of State for the Colonies, and to assist the company's administrator there is an Executive Council, consisting of the Resident Commissioner, the administrators of the different divisions, his subordinates, and 4 members appointed for three years by the company with the approval of the Secretary of State. A Legislative Council was created, consisting of the company's council, the Executive Council, 5 members appointed by the company and approved by the Secretary of State, and 4 members elected by the registered electors. The life of the Legislative Council is three years unless it is dissolved previously. It has power to pass ordinances which have the effect of law when approved by the Resident Commissioner, but may be vetted by an elected assembly within a year. Financial estimates for each year are submitted to the Legislative Council by the company's administrator, and when passed must have the approval of the Resident Commissioner. Judges are nominated by the company and confirmed by the Secretary of State. Natives are on an equal political footing with whites, excepting that no arms, ammunition, or liquor may be sold to them. A secretary for native affairs looks after their interests under the direction of the Resident Commissioner, who has entire control over the military police. If the carriage to Johannesburg than the rail and ocean freights to Delagoa Bay. The estimate of revenue for the Transvaal for the year ending June 30, 1903, is 10.3 million pounds sterling. Sir Arthur Lawley was appointed Lieutenant-Governor of the Transvaal under the High Commissioner and entered upon office on Sept. 1, 1903.

The Territory of the British South Africa Company, originally £1,000,000, has been successively increased to £4,375,000 of stock and £1,250,000 of debentures. Judges are nominated by the company and confirmed by the Secretary of State. Natives are on an equal political footing with whites, excepting that no arms, ammunition, or liquor may be sold to them. A secretary for native affairs looks after their interests under the direction of the Resident Commissioner, who has entire control over the military police. If the carriage to
The Rhodesian Railroad, which joins the Cape system at Vryburg and runs through Bechuana-
land and Mashonaland to Buluwayo, has been taken over by the Cape Government. It will be
extended by the company to the Wankie coal-mines, and thence to the Victoria Falls of the
Zambesi and northward to Lake Tanganyika. A branch will run southward to Gwanda, and
thence to Tuli. A railroad built by the Mashonan-
land Railway Company from Beira across Portugu-
ese country to Umtali has been completed to
Salisbury, and a line is being built from that
town, which is the seat of the administration,
through Hartley and Gwelo to Buluwayo. A
railroad 75 miles long connects the mines of Lo-
mogundu with Salisbury.

The post-office in 1901 carried 661,444 South
African letters and postal cards and 279,921 for
planters and missionaries. The number of new
books, and parcels, £28,783; registered packets, 31,889. The postal revenue was £167,730; expend-
titure, £23,237.

The length of telegraphs in Rhodesia on April
1, 1901, was 3,564 miles, with 5,215 miles of wire.
Of the African transcontinental line, which has
reached Blantyre in British Central Africa and
been carried to Tanganyika and along its coast
through German territory to Ujiji, and is being
extended to the Nile north, was 1,308 miles.
There were 185,406 telegrams received and 211,207
dispatched in 1901; receipts, £24,653; expenses,
£27,321; receipts from telephones, £4,230.

The undeveloped region north of the Zambesi
is divided into Northwestern Rhodesia, embracing
the native kingdom of Barotseland, and North-
eastern Rhodesia. Northeastern Rhodesia, compris-
ing the region lying between the lakes Tan-
ganyika, Nyasa, Mweru, and Bangweelo has an
area of 129,000 square miles, with a population
exceeding 300,000. There were 165 British
residents in 1901. It is divided into the districts of
Tanganyika, Mweru. Awamba, Luapala, Kafue,
Central Africa Protectorate, and North Loangwa.
The seat of administration is Fort Jameson, on
the Tanganyika plateau. The forces of the Brit-
ish Central Africa Protectorate preserve order.
Settlers have begun to plant coffee and to utilize
the abundant fiber-plants which grow wild. Rub-
er and ivory are the chief exports at present.
Coal and gold have been discovered. In
Barotseland the seat of the administration
is at Victoria Falls. There are 6 stations alto-
gether. Col. Colin Harding has organized a na-
tive police force. The slave-trade has been sup-
pressed and the traffic in liquor is regulated, with
the concurrence of Lewanika, the Barotse king,
whose kraal is at Lealui.

Central Africa Protectorate.—The British
Central Africa Protectorate, constituted on May
14, 1891, is administered by a Royal Commissi-
oner under instructions from the Secretary of
State for Foreign Affairs. The area is 42,217
square miles; the population is about 900,000. The
population is about 900,000. There were 450 Eu-
ropians and 250 East Indians in 1901. Europeans
cultivate coffee in the Blantyre province, export-
ing 3,000 pounds in 1899. Rice is grown with success, and wheat has been introduced. Horses thrive
in the highlands. The revenue collected in 1900
was £47,077, and expenditure £66,366, the de-
ficiency being supplied by a grant from the
Imperial Government. The revenue in 1901 was
£49,216, and expenditure £72,386. The mil-
tary force maintained to preserve order and com-
bat the slave-trade consists of 215 Sikhs and one
of the battalions of the native Central Africa
regiment. The other battalion of which has served
in Mauritius and Somaliland and in active oper-
a tions on the west coast of Africa. There is also
a police force of 200 men. The Gwendeni, of
350 tons, and two other gunboats are maintained
on the upper Shire and Lake Nyasa, and British
gunboats by arrangement with the Portuguese
Government patrol the lower Shire and the Zamb-
bei. At Chinde, the port at the mouth of the
Zambesi, merchandise is transshipped to and from
river steamers free of duty in the British conces-
sion. A railroad is being constructed from Chi-
romo to Blantyre. The imports, consisting of cot-
rn~s, machinery, provisions, hardware, and
agricultural implements, rose steadily from £78,6-
63 in 1897 to £176,000 in 1900; the exports, con-
sisting of ivory, coffee, and rubber, from £23,299
to £79,000. Coffee, owing to a decline in price
and failure of transport, fell off in the latter
year, and still more in 1902. The value of imports was £146,063 and of exports £38,722.
The transit trade was £30,310 in 1900 and £51,333 in 1901.

Portuguese Possessions.—The Mozambique
and Loanda territories, now separated by British
Central Africa and Rhodesia, are nearly all that
remains of the former colonial empire of Portu-
gal. Portuguese East Africa, divided into the
districts of Mozambique, Zambesi, and Lourenço
Marques, the last including the Inhambane and
Gaza territories, has a total area of 301,000
square miles, with about 3,120,000 inhabitants.
The chartered Nyassa Company has a commercial
monopoly and administrative authority over the
northern part lying between the Rovuma and
Lurio rivers and Lake Nyasa. The Mozambique
Company has sovereign rights till 1941 over Ma-
sica and Sofala. The Zambesi Company conducts
agricultural and mining enterprises. Fishing
operations on the Zambezi river. The Inhambane
Company failed to utilize its privileges in the
district conceded to it and forfeited its charter.
The Portuguese Government keeps up a military
force of 3,004 men, of whom 2,468 are natives,
reducing it to 2,250 when there are no disturb-
ances. The local revenue in 1902 was estimated
at 2,937,545 metires, which the metropolitan Gov-
ernment has to supplement to provide for a total
expenditure of 3,060,301 milires. The imports of
the territories under Government administration
were 5,829,980 milires in value, and exports 5,836,404 milires; imports of the Mozambique
Company were 4,737,723 milires, and exports 270,601
milires; imports of the Nyassa Company were 499,896
milires, and exports 320,980 milires; total im-
ports, 11,086,999 milires; total exports, 6,427,065
milires; transit trade, 6,283,867 milires. The port
of Mozambique had in 1900 a population of 285
Europeans, 226 Asians, and 5,000 natives; Chi-
dine, 218 Europeans and 1,300 natives; Beira,
1,438 Europeans and 2,000 natives; Inhambane,
100 Europeans, 250 Asians, and 3,000 natives;
Lourenço Marques, 5,120 Europeans and 3,000
natives. The imports at Lourenço Marques in 1898
were £751,831; exports, £16,600; transit
trade, £1,770,682; tonnage entered, 1,032,543. At
Beira in 1900 the imports were £1,071,881; ex-
ports, £20,133; transit trade, £296,402; tonnage
entered, 726,725. At Quelimane imports were
£117,967, and exports £73,857; tonnage entered,

VOL. XIII.—41 A

SOUTH AFRICA. 641
102,956. At Inhambane imports were £200,557; exports, £230,800; transit trade, £137,205; tonnage entered, 41,000. At Chinde the transit trade amounted to £99,410. At Mozambique the imports were £200,381; exports, £222,434; tonnage entered, 206,238. The goods consist of cotton goods, hardware, and liquors. The exports are rubber, ores, ivory, and wax. The gold-fields in Manicaland have been prospected by British and other miners, and their claims are awaiting transport facilities before they can be developed. There were 23 steamboats, of 742 tons, and 105 barges, of 3,320 tons, plying on the Zambezi and Shire rivers in 1900.

The Delagoa Bay Railroad has a length of 57 miles in Portuguese territory to the Transvaal border, and from there to Pretoria, 200 miles. The Beira Railroad runs for 78 miles in Portuguese territory and is continued to Salisbury. The telegraph lines in the colony have a length of 1,850 miles, connecting with those of the Transvaal and Rhodesia. Brig.-Gen. Raphael C. Sorvoj was Governor-General of Portuguese East Africa in 1902.

The colony of Angola has an area of 484,500 square miles and a population estimated at 4,119,000, of whom 861,000 are whites, including 91,000 whites engaged in commercial, mining, and industrial privileges. Copper, iron, petroleum, salt, and gold exist. The chief exports are rubber, coffee, wax, vegetable oils, ivory, cattle, and dried fish. The coconut-palm flourishes. Sugar-cane is raised for the distillation of rum. The total value of imports in 1900 was £5,267,238, and of exports £5,369,818, 107 miles.

The number of merchant vessels that called at the ports of Ambriz, Loanda, Benguela, and Mossamedes in 1900 was 346, of 365,146 tons. There are 244 miles of railroad and 1,170 miles of telegraph lines.

German Southwest Africa.—The German Southwest Africa Protectorate has an area estimated at 325,000 square, with a population of about 200,000 Hottentots, Bushmen, Damara, and Bantu. The number of Europeans on Jan. 1, 1901, was 5,398, of whom 2,104 were Germans, including 761 soldiers, besides whom a native force has been organized and trained. The Governor in 1902 was Col. Leutwein. A German company has commercial and mining privileges in the coastal districts of Namquand, Damaraland, and the north equal to German company has obtained concessions. Refugee Boers have settled on grazing lands in the northeast. The German Government offers to advance £4,000 marks for an interest to establish German settlers on the land. The Damaras have great herds of cattle and flocks of sheep and goats. Johannesberg in 1889 amounted to 8,641,000 marks; the copper, 1,390,478 tons, and 27,684,800 marks, to which the Imperial Government contributed £7,684,800.

SOUTH CAROLINA. (See under United States.)

SOUTH CAROLINA INTERSTATE AND WEST INDIAN EXPOSITION. This was held in Charleston, S. C., from Dec. 1, 1901, to June 1, 1902. It had for its special objects the establishment of new industries and commerce in the South; the extension into the Porto Rico and the West Indies; the development of the American culture of silk and tea; the promotion of Southern manufactures of cotton and iron; the establishment of new steamers and the building of the central seaport of the great Southeast; and the presentation to the world of the resources and attractions of the territory along the Southern seaboard.

Organization.—A resolution approving the project of holding such an exposition in Charleston was passed by the General Assembly of South Carolina in January, 1900, and a year later an act appropriating $50,000 for the purpose of erecting a State building on the exposition grounds and making a complete display of the products and resources of the State was enacted. Soon afterward the Governor of the State appointed a special commission of five members to direct the State exhibit. Meanwhile, the City Council of Charleston appropriated $50,000 in aid of the exposition. The General Exposition Company, with a capital stock of $250,000, of which the officers were as follows: President, F. W. Wagner; vice-president, W. H. Welch; treasurer, Samuel H. Wilson; director-general, John H. Averitt; assistant director-general, Algar M. Wheeler; general counselor, John F. Ficken; general auditor, P. J. Balguerie; manager of publicity and promotion, J. C. Hempfl; manager of exhibits and concessions, E. L. Tiesler, Jr.; manager of law and legislation, John F. Ficken; manager of admissions and collections, H. J. Fleming; manager of negro department, Booker T. Washington; manager of live-stock department, George F. Weston; president of woman's department, Mrs. Sarah Calhoun Simonds.

Location.—A tract of 250 acres about two miles from the business center of Charleston was chosen as the site of the exposition. It included the old Washington race-course and an old plantation settled in colonial days, which became the property of the president of the Exposition Company. The slightly rolling country lent itself readily to varied and artistic effects, and the live-oaks without formed a feature that was specially attractive. The groves and green slopes of the Wagnerser farm provided a permanent background for the architect and landscape gardener to work upon. The grounds were easily accessible from the city by the electric railway system, and on the west side by means of Ashley river, to which the grounds extended.

Buildings.—Owing to the happy shape of the irregular tract constituting the site, it was possible to divide the grounds into a Natural Section and an Art Section, with the Administration Building marking the separation of the two. In the Natural Section were the Art Palace, the Transportation and Machinery Building, the Woman's Building, and the Negro Building, all shaded by century-old live-oaks, besides the Avenue of States and Cities, including the State buildings from New York, Pennsylvania, Maryland, Illinois, Missouri, Louisiana, Minnesota, Wisconsin, Michigan, Illinois, Wisconsin, and the Administration Building, covering 30 acres, over which extended the main bridge with its electrical booth and fountain. To the west were the breakwater and the bay, devoted to the fisheries exhibit made by the Government. To the east and south of the Administration...

SOUTH CAROLINA INTERSTATE AND WEST INDIAN EXPOSITION

The Auditorium.

THE AUDITORIUM.

tration Building was the Art Section, in which were housed the buildings. These were designed by Bradford L. Gilbert, who was architect in chief of the exposition, and were constructed of strong timber framework, with such iron as was needed for stiffness and additional strength, and the entire exposed surfaces were covered with staff, the predominating color of which was a soft ivory, with white trimmings, and in some instances a color enrichment in shades of red and orange. The color tint used led to the designation of the grounds and building as the "Ivory City." The most imposing building on the grounds was the Cotton Palace, which had a façade 250 feet long and a dome rising to a height of 100 feet, while the floor space was 50,000 square feet. It was connected on either side with the Palace of Commerce and the Palace of Agriculture, two splendid buildings of lesser dimensions but similar architecture, by means of curved colonnades, broken by four exedra of artistic design on either side. These colonnades and exedra contained many of the various exhibits. The three buildings, with colonnades, formed the Court of Palaces, and from an architectural standpoint was the most striking feature of the exposition. The pediments and gables, red-tiled roofs and turrets, were in a typically Southern style of architecture. The motif was Spanish-American, with huge masses, simple and strong contour and outlines, with enrichments of terraces and sculpture at various entrances and initial points. In front of the Palace was a court, or patio, filled with tropical plants and enriched by fountains, and included the Sunken Garden with its lake. The Administration Building stood at the entrance of the grounds and covered about 15,000 square feet. It was composed of a central tower and two flanking wings placed at nearly right angles, at the extreme end of which were pylons, connected with the main building by a covered way. These covered ways formed the entrances to and from the grounds. The entire length of the building and entrances was more than 400 feet. The central dome and rotunda was 75 feet in diameter, and extended about 40 feet above the roof, to a height of about 75 feet above the ground. The striking feature of this building was a great round balcony, which projected boldly into the grounds. Opposite was the building devoted to Mines and Forestry, which was circular, and was designed after one of the old palaces of Spain. It was one story high, with windows high above the ground, deeply recessed, giving restful, shadowy effects to the general design. In this building were shown the products of the mine and forest, both in the natural and the manufactured state. To the left of the Administration Building, and at the northern end was the Auditorium, capable of seating about 4,000 persons. The outside of the building toward the Court was circular, and the decorations were symbolical of the uses for which the building was designed. The acoustics received considerable attention, and one of the largest organs ever constructed was built for this exposition.

In the Natural Section, to the west of the Administration Building, and on the north side of Lake Juanita, was the Transportation Building, a long, low structure, with a deep roof covered with Spanish tile, having Spanish turrets and columns. The design was massive, though simple, and the entire ornamentation of the building was massed on the gable above and on either side of the building, which showed the graceful curves of the Spanish Renaissance style of architecture. Still westward was the Machinery Building, also on the north side of Lake Juanita. It was likewise long and low, with a loggia consisting of many arches and columns, simple yet massive in outline, most of the ornamentation being confined to a central porch, which formed the entrance, and above it a gable presented the picturesque curves of the Spanish Renaissance type. On the south side of the lake, and west of the Administration Building, was the Art Palace, of purely classical design and entirely of brick. It was 140 feet long and 50 feet wide, and the height of the interior walls was 30 feet. A very large skylight, 24 feet wide, extended the entire length of the building, giving ample light to display the art works. Four groups in the Dewey Arch, originally erected in New York city—War, Peace, The Army, and The Navy—adorned the exterior on the east and west. The Negro Building, after architectural features of the Spanish Renaissance order, of a strongly Mexican mission type, was in the western part of the grounds. The building resembled the letter H in general outline, with two wings and cupolas, and contained 12,000 square feet of flooring. The Woman's Building was a good specimen of colonial architecture, and was once the home of William Lowndes, the statesman of South Carolina, and the headquarters of Sir Henry Clinton in the war of the Revolution. It was at the extreme west of the grounds on Ashley river. It was built of black cypress and cedar, with fine wainscoting and panel walls, and the high mantels and stucco walls of the period. It was of special interest, owing to the large historical collections that were shown in it by the Society of the Colonial Dames.

In the Natural Section were the State buildings, the first of which, after passing the Administration Building, was that erected by Pennsylvania. In general outline it resembled the Administration Building, having the same projecting balcony, and being also in the Spanish Renaissance style of architecture. It was larger, however, being 150 feet long by 80 feet wide, with a half-circular court and piazza 12 feet wide. There were four square towers, on which the staff detail was very elaborate, and the cost of arms of Pennsylvania was above the entrance. It cost $35,000. The Maryland Building, on the shore of Lake Juanita, was of pure colonial design, with wide piazza, tall columns, and an ample hall. The color effects of the main loggia were very rich and fine, and the interior complete down to the smallest detail. It cost $25,000. The New York Building was of the Spanish Renaissance style, with a patio or open court filled with tropical plants. The corners and main pediments of the building were en-
riched by beautiful columns and cloisters about 30 feet in height, supporting wide overhanging roofs covered with Spanish tile. A wide piazza at the back overhung Lake Juanita, and was shaded by the large live-oaks. Its cost was $15,000. The Illinois Building was in the colonial style, with a wide and many-columned piazza and moss-green shingled roof. It was in the western part of the grounds, and cost $5,000. The building was that erected by Philadelphia, with a square Independence Hall tower, round dome, and restral columns, in which was preserved the Liberty Bell, lent to Charleston during the exposition. Cincinnati had a modest building of one story, with a two-story tower, which was surrounded on three sides by an arcade veranda and covered by a roof of deep-red tile. It contained numerous attractive exhibits, lent by the manufacturers of Cincinnati. Among the minor larger buildings were the buildings devoted to the interests of Cuba, Porto Rico, and Guatemala.

Statuary.—The buildings and grounds of the Charleston Exposition were generously adorned with mural decorations and statuary. The former were in stone, and the latter in stone, marble, and bronze, among which were those that decorated the interior of the Auditorium, and were also in the form of gargoyles, such as the striking heads seen above the doors of the Cotton Palace and the Palaces of Commerce and Agriculture. The statuary was placed at conspicuous sites in the grounds, and included six original groups, as follow: The Aztec, by Louis A. Gudebrod; The Indian, by Carl Tefft; The Negro, by Charles A. Lopez; The Colonial, by Oscar Lenz; and The Huguenot, by Miss Elsie Ward, which were in the Court of Palaces; and Mother and Child, also by Miss Elsie Ward, which stood before the Woman's Building. A low balustrade of shells and dolphins around the Sunken Garden, as well as the baby mermaid and dolphins, and the admirable New South just beyond the bandstand on the plaza, were also original groups.

Besides these, there were numerous reproductions from the antique and from modern studies. Among the exhibits were groups of Minos and Minoe exhibited (reproductions) by Pan, which formed the fountain above the Sunken Garden, and French's Washington on Horseback (which was at the Paris Exposition), which stood on a small plaza in front of the Auditorium. In the Philippines, a little grove near the Woman's Building was the Betrothal, by Amendolz, and on the Art Building the four groups War, Peace, The Army, and The Navy, from the Dewey Arch in New York.

Amusement Features.—These were in the southeastern portion of the grounds, which were designated by the now conventional title of Midway, and included an Eskimo Village, Fair Japan, and Streets of Cairo, as ethnological features. The Cuban-American Theater, Cyclorama of Manassas, Wild West and Mexican Bull-Fight, and Wild-Animal Arena, which were theatricals while the Moorish Palace and Crystal Palace, Night and Morning, and Palace of Light, were spectacular. In addition to these were the Old Mill, Temple of Fortune, Beautiful Jim Key, and the Ostrich Farm.

Opening Exercises.—Owing to the fact that Dec. 1 fell on Sunday, it was deemed advisable to postpone the opening of the exposition until Dec. 2, although on Dec. 1 exercises appropriate to the day were held, beginning with an invocation by Bishop Capers, of South Carolina, and followed by the reading of a dedication ode by George E. Sass, of Charleston, set to music by Theodore Saul, and accompanied by the First Artillery Band. Then came addresses by various clergymen, and the benediction was pronounced by Mgr. Quigley. The formal opening began with an imposing parade of military and civic bodies, which escorted the guests to the exposition grounds, after reviewing which the guests assembled in the Auditorium, where the ceremonies began, consisting of an invocation by Rev. Charles S. Vedder and addresses of welcome by F. W. Wagener, president of the Exposition Company, and M. B. McWeeney, Governor of the State. The president of the occasion was Chauncey M. Depew, who was introduced by Mayor J. A. Smith, and, after reviewing the condition of the Southern States in 1866, said that in improving it the incomparable and invincible grit and pluck of the American were never more splendidly illustrated, after which he discussed the present conditions in the South, and said that capital and enterprise are rapidly converting the vast pine forests of the South into settlements of thrift, productivity, and happiness. At the conclusion of the oration, President Wagener, by means of a wire connected with the White House in Washington, sent cordial greetings to the President of the United States, and informed him that the building of the exposition at Charleston was completed. President Roosevelt responded with "hearty congratulations upon what had been achieved, and my earnest wishes for the complete success of your undertaking. I hope it may prove of great and lasting benefit to our industries and to our commerce with the West Indies." The exposition was then formally declared to be open by the presiding official.

Exhibits.—The exhibits were classified under 22 divisions, as follow: Agriculture.—1. Agricultural and dairy products; 2. Agricultural implements and machinery; 3. Live stock; 4. Foods and their accessories; 5. Horticulture (pomology, floriculture, viticulture). Forestry, Fisheries, and Mining.—6. Forestry and forest products; 7. Fish and fisheries; 8. Mines and metallurgy. Machinery and Electricity.—9. Machinery; 10. Electricity and electrical appliances. Transportation Exhibits, Good Roads, and Ordinance.—11. Transportation exhibits and good roads exhibit, road-making machinery; 12. Ordinance and munitions of war. Manufactures and Graphic Arts.—13. Manufactures; 14. Graphic arts (metal, paper, steel and copperplate printing, photo-mechanical processes, drawing, engraving, bookbinding). Liberal Arts, Ethnology, and Archæology.—15. Liberal arts and educations in the various departments of learning, health, works, sanitation, constructive architecture, social economy, music and the drama); 16. Ethnology and archæology. Collective Exhibits.—17. State collective exhibits; 18. County collective exhibits; 20. Cuba and Porto Rico, and other islands of the West Indies; 21. Philippines and Hawaii; 22. Foreign exhibits. These divisions were again subdivided into groups, of which there were 135, and the groups into classes, of which there were 576. A Jury of Awards was called to the exhibition on April 7 to examine the exhibits, and they made awards of diplomas of the grades of gold medal, silver medal, bronze medal, and honorable mention. Selim H. Peabody was chairman of awards.

Closing Exercises.—These occurred on Saturday, May 31, which was appropriately designated as Charleston Day. Business was suspended during the afternoon, and a program was arranged consisting of a dedication of ode by George H. Sass, of Charleston, set to music by Theodore Saul, and accompanied by the First Artillery Band. Then came addresses by various clergymen, and the benediction was pronounced by Mgr. Quigley.
THE ADMINISTRATION BUILDING.

THE COTTON PALACE AND THE SUNKEN GARDEN.
the Executive Committee. These began with a prayer by the Rev. Charles S. Vedder. Then came addresses by J. Adger Smyth, Mayor of Charleston; F. W. Wagener, president of the exposition; Capt. S. G. Butler, of the United States Marines; Henry E. Dosch, commissioner from Oregon; John F. Ficken, counsel of the exposition; and others; after which resolutions presenting the thanks of the people of Charleston and the State of South Carolina to the exposition officials were offered by Wilson G. Harvey. A military parade, terminating in a sham battle, fought on the race-course, brought the exercises to an end. The buildings were closed at dusk, but the Midway Arena continued open until midnight, when taps were sounded, a salute was fired, and the lights were turned out.

Results.—At its close it was conceded that considerable good had been accomplished by holding an exposition in Charleston, but the number of exhibitors was comparatively small, and the attendance light. It was estimated that at least a million persons would visit the exposition, but at its close the returns showed that fewer than half that number had attended. This was due largely to the fact that the white population of Charleston is comparatively small, and of that number many could not afford to visit the exposition as frequently as was expected. It naturally followed, therefore, that there was a deficit at the close of the exposition, which was estimated to be about 30 per cent., and in consequence the Exposition Company went into the hands of a receiver. Subsequently, a bill was introduced into Congress asking for an appropriation of $160,000 to make good the deficit, and a bill affording relief became a law. At the close of the exposition the City Council adopted a report recommending the purchase of 70 acres of the exposition site, agreeing to pay $32,500 for it, largely in response to a sentiment that a lasting memorial of the exposition should be had as a suburban park.

Literature.—During the life of the exposition a monthly periodical, entitled The Exposition, was regularly issued, and illustrated articles, with the titles of the Ivory City, by T. Cuyler Smith, appeared in Frank Leslie’s Popular Monthly for March, 1902, and A Great Southern Exposition, by James B. Townsend, appeared in the Cosmopolitan for the same month. The illustrations in this article were furnished by Edward Bower.

SPAIN. 645

versities, learned societies, and the most highly assessed taxpayers. Princes of the royal family, grandees of Spain having 60,000 pesetas of income, captains-general of the army, admirals of the fleet, archbishops, and Supreme Court judges are members by right of birth or of office. There are 80 of these and 100 appointed for life, and the rest are elected for ten years or the duration of the Cortes. Members of the Congress are elected for five years by universal adult male suffrage. The reigning King is Alfonso XIII, born May 17, 1886, son of Alfonso XII and Archduchess Maria Christina of Austria, who was Queen Regent from the King’s birth until he came of age on May 17, 1902. The Cabinet constituted on March 6, 1901, was composed as follows: President of the Council, P. M. Sagasta; Minister of Foreign Affairs, the Duke of Almodovar; Minister of Justice and Worship, the Marquis Teverga; Minister of War, Gen. A. Weyler; Minister of Marine, the Duke of Veragua; Minister of Finance, Señor Urrias; Minister of the Interior, Señor Gonzalez; Minister of Public Instruction, Count Romanones; Minister of Agriculture, Industry, Commerce, and Public Works, M. Villanueva.

Area and Population.—The area of the kingdom is 197,670 square miles, including ports on the coast of Morocco having an area of 13 square miles and 11,003 inhabitants. The total population of the kingdom at the census of 1897 was 18,089,500, consisting of 8,773,730 males and 9,315,770 females. The area is cultivated in 440,000 speaking the Basque language in the Pyrenees, 60,000 Moroccos in the south, 50,000 gypsies and a comparatively small number of Jews. The legal population in 1897 was 18,928,040. The population of the chief towns was as follows: Madrid, 512,150; Barcelona, 506,580; Valencia, 204,708; Sevilla, 146,205; Malaga, 125,579; Murcia, 108,403. The number of marriages in 1900 was 161,201; of births, 827,848; of deaths, 536,716; excess of births, 91,132. The number of emigrants in 1900 was 63,020, against 33,582 in 1899.

Finances.—The ordinary revenue for 1900 was 994,818,665 pesetas, and the ordinary expenditure 906,063,503 pesetas. For 1901 the provisional returns are 967,243,491 pesetas for revenue and 930,854,193 pesetas for expenditure. The estimates for 1902 are as follows: of the revenue at 974,437,749 pesetas, of which 413,470,377 pesetas come from direct taxes on land, trade, mines, incomes from personal property, deceased legacies, public services, government salaries, etc.; 339,590,000 pesetas come from indirect taxes; 162,220,000 pesetas come from the tobacco monopoly, the lottery, the mint, etc.; 21,025,358 pesetas are revenues from, and 8,300,000 pesetas come from sales of national property; and 29,182,014 pesetas come from the public treasury. The estimates of expenditure for 1902 amount to 971,170,559 pesetas, of which 9,406,849 pesetas are for the civil list, 1,838,085 pesetas for the Cortes, 413,811,806 pesetas for the public-debt charges, 1,436,190 pesetas for courts of law, 71,780,500 pesetas for pensions, 955,883 pesetas for the City Council of Madrid, 347,590,000 pesetas for the Ministry of Foreign Affairs, 45,240,655 pesetas for the Ministry of Justice and Worship, 304,506,716 pesetas for the Ministry of War, 35,041,702 pesetas for the Ministry of Marine, 32,578,158 pesetas for the Ministry of the Interior, 43,380,100 pesetas for the Ministry of Education and Fine Arts, 74,375,820 pesetas for the Ministry of Industry, 9,527,253 pesetas for the Ministry of Finance, 30,250,820 pesetas for the collection of taxes, and 2,000,000 pesetas for colonial charges.

The public debt on June 30, 1901, amounted to
9,651,503,304 pesetas, requiring 399,005,177 pesetas for the payment of the annual interest. The annual production was 9,659,700 tons of internal and external, and 7,594,231,135 pesetas of internal debt, of which the interest charges were 41,201,685 pesetas and 321,533,506 pesetas respectively; a treasury debt of 1,027,882,545 pesetas, on which the interest is 25,276,786 pesetas; and various obligations of the treasury of amount not stated bearing 10,990,000 pesetas interest. Included in the state debt are debts of the colonies devoted upon Spain, amounting to 1,175,258,000 pesetas.

The Army.—The military forces consist of a permanent army, an active reserve, and a sedentary reserve. Any Spaniard at the age of twenty may be drawn to serve three years in the permanent army unless he buys exemption by the payment of 1,500 pesetas. The army is organized in 5 corps, of which 2 have 3 divisions, 3 have 2 divisions, and 3 have 1 division. There are, moreover, 3 divisions of infantry in the Balearic Islands, the Canary Islands, and Ceuta, and 1 brigade at Melilla. The peace strength of the regular army in 1900 was 50,273 infantry, 15,498 cavalry, 18,571 artillery, 4,836 engineers, 4,879 administrative troops, 436 royal guards, 15,281 civil guards, and 2,782 gendarmes, total, 117,774 men. The war strength was 132,000 infantry, 17,156 cavalry, 12,166 artillery, 11,027 engineers, and 11,623 administrative troops, etc.; total, 183,872 men. The annual contingent of recruits is about 80,000. The number of depot battalions is being increased, and each reserve battalion is located in a particular district, where active troops and reserves are associated in a regimental organization. By this method it is expected that the total fighting strength of the nation can be raised to 1,083,595 men. The troops are armed with Mauers of the model of 1893, having a caliber of 7 millimeters. There are 16,600 horses and 722 guns.

The Navy.—The Spanish navy after the American war had only a single battleship left, the Pelayo, of 9,900 tons, with a speed of 16 knots, having 18 inches of armor at the water-line and 19 inches on the barbettes in turrets, which are 4 9.4-inch Cañet guns, and besides these there are 9 5.5-inch guns, 287 tons of armor of 10 inches, the first-class cruisers Cataluña, Cardenal Cisneros, and Princesa de Asturias, of 7,000 tons and 13,000 horse-power, giving a 20-knot speed, though begun before the war and completed after. The Emperor Carlos V, of 9,235 tons, can make 20 knots with engines of 15,000 horse-power and carries a strong armament, consisting of 2 11-inch guns and 10 5.5-inch, 4 4.7-inch, and 2 3-inch quick-fires.

Commodities and Production.—The yield of cereals in 1900 was 2,740,700 metric tons of wheat on 3,568,700 hectares, 1,234,800 tons of barley on 1,389,000 hectares, 553,200 tons of rice on 731,000 hectares, 238,500 tons of oats on 379,200 hectares, and 600,500 tons of corn on 475,800 hectares. Of rice 195,000 tons were grown on 33,750 hectares. Vineyards covering 1,997,456 hectares yielded 68,089,000 hectoliters of wine in 1898 and 1,092,238 hectares of olive-groves produced 2,829,111 hectoliters of fruit. Oranges and hazelnuts are exported, as well as various preparations of fruits. Minor crops are esparto, flax, hemp, and beans. There were 2,046 mines in operation in 1900, producing 2,875,749 tons of silver and 2,514,545 tons of bituminous coal, 68,427 tons of anthracite, 91,133 tons of lignite, 2,747,714 tons of copper ore, 131,437 tons of lead ore, 182,015 tons of silver-lead ore, 168,248 tons of iron ore, 98,363 tons of zinc ore, 35,970 tons of manganese ore, 1,647 tons of silver ore, 64,364 tons of sulfur ore, and 450-
the Vatican, which contended that all religious orders that the Government had authorized on the same footing as those authorized in the concordat. The Government reached a modus vivendi with the Holy See, agreeing temporarily to recognize all religious of all orders authorized or unauthorized, that apply for civil inscription. The Radical members in the Cabinet were ignorant of this modus vivendi, and when it was divulged after the adjournment of the Cortes a Cabinet crisis occurred. There was a truce until the festivities of the enthronement were over. Alfonso XIII on May 17, when he reached the age of sixteen, his legal majority, took from his mother, the Queen Regent, the powers of government as constitutional King of Spain. On May 28 Señor Canalejas resigned, and on May 31 Suarez Inclan was appointed Minister of Agriculture. The members of the Cabinet agreed on the principles that no religious association can establish itself without previous authorization, to be obtained by means of a law; that religious orders that are established must conform to the general laws regulating instruction and submit to sanitary inspection; that religious orders can not hold land except under the terms of their license; and that religious orders can be dissolved by unanimous vote of the Council of Ministers for reasons of public order. Señor Canalejas called for the reassembly of the Cortes to consider a bill embodying these principles, but Señor Sagasta and most other members did not deem the matter urgent. The religious orders were allowed till June 10 to register. The total number of associations in Spain was 3,115, with 50,933 members, of which 2,586, with 40,188 members, were for women and 529, with 10,745 members, for men. The total number that sought and obtained registration was 2,611, registration being provisional only in the case of 1,410. In the case of 150 it was withheld temporarily pending further examination, and of the remaining 354 most were orders of the concordat requiring no registration. Only 3 communities neglected to apply for registration. An issue of 338,000,000 pesetas of 5-per-cent. redeemable bonds was taken readily in June in Spanish cities. A decree was then issued requiring private schools of all kinds to seek official authorization and to submit to periodic inspection and the laws regarding sanitary management and modes of punishment. There has been very little protective legislation for working men in Spain, and for this reason the laborers often resort to violence.

The Cortes, having adjourned during the ministerial crisis, met again on April 3. The new bill on bank notes, requiring the Bank of Spain to carry a cash reserve, half in gold, for all over 1,200,000,000 pesetas, was opposed by the bank directors, and also the provision that the bank should derive profits from selling Government securities. The bill stipulated that the debt of the Government to the bank should be paid off in ten years, and provided for a foreign loan for this purpose, but this measure would not authorize the issue of bonds, with the stigmatization of 31 pesetas a kilogram. A Government bill suspended the duty on meat and live cattle for six months. The municipalities were called upon to substitute other taxes for the octroi duties on foodstuffs. The interior minister, De Conchera, in his report for 1903, showing 591,178,227 pesetas of revenue and 948,861,698 pesetas of expenditure, the Minister of Finance proposed changes in the liquor law and also a tax on the size of the bottle. A decree for closing unregistered religious associations was temporarily suspended pending negotiations with the leaders of the groups who would give him no assistance. On Nov. 14 a homogeneous Liberal Cabinet was constituted as follows: President of the Council, Señor Sagasta; Minister of Foreign Affairs, the Duke of Almodovar; Minister of Justice, Señor Puigcerdá; Minister of Finance, Señor Equilior; Minister of Agriculture, Señor Moret; Minister of War, Gen. Weyler; Minister of Marine, the Duke of Veragua; Minister of Public Instruction, Señor Romanones; Minister of Public Works, Amos Salvador. The Premier was violently assailed on account of the change in the ministry. He was accused of bringing it about to please the King. On a vote of censure the min...
STRIKE OF THE COAL-MINERS.

Ministers were sustained on Nov. 21 by 181 votes to 118, and were confirmed. The ministry was forced to resign, and on Dec. 6 the Conservative leader formed a Cabinet as follows: President of the Council, Señor Silveira; Minister of Foreign Affairs, Señor Palma; Minister of Justice, Señor Data; Minister of Finance, Señor Villa-Verde; Minister of the Interior, Señor Maura; Minister of War, Gen. Linares; Minister of Marine, Señor Tocca; Minister of Public Instruction, Al- tenda Salazar; Minister of Public Works, Marquis Vadillo. The sittings of the Cortes were suspended and afterward the Cortes was dissolved.

STRIKE OF THE COAL-MINERS.

With the organization of the anthracite miners in Pennsylvania by the United Mine-Workers of America, in 1890, began a situation that led to the strike of 1902. Through the machinations of Senator Marcus A. Hanna and others, the operators made concessions, and trouble for a while subsided. A wage increase of 10 per cent. was granted in April, 1902. On April 30, the request by the United-Mine-Workers for a joint conference for settling a wage scale for the year ending March 31, 1903, was declined by the operators. At Shamokin, in March 1904, the miners in convention demanded a shorter work-day, a minimum day wage-scale, uniform increase of wages, and the weighing of coal for payments by the amounts mined. They resolved to appeal to the National Civic Federation, and that, in case of adjustment not being made before April 1, only three days' work a week should be allowed, except for keeping the mines in repair. They also made a provisional strike declaration.

Senator Hanna, acting for the federation, vainly endeavored to settle the difficulty, and on May 8 proposals of arbitration were made by John Mitchell, president of the United Mine-Workers, to the presidents of the coal companies, who promptly rejected them and declined to negotiate with Mr. Mitchell or to recognize the union. The position of the operators on the general question had already been indicated by one of their number in the following statement: "There is a reason why the miners should not be satisfied with the principles which are so much the subject of discussion. We can not be made concessions to them. The rank and file of the miners are perfectly satisfied with what they are." On May 10 the strike was officially declared, and about 145,000 men quitted the mines, of whom nearly 120,000 were members of the union, the remainder being ineligible to membership. The most serious labor struggle in the history of the country had now fairly begun. The strikers demanded an increase of 20 per cent. in the pay of miners working on the ton, an eight-hour day for all employees without change of wages, payment by weight to be based on a ton of 2,240 pounds, and recognition of their union. The advantage of the strikers lay chiefly in the Pennsylvania law that every miner in the anthracite field must hold a certificate of competence based on not less than two years' experience, and these, nearly the whole number belonging to the union and without them the mines could not be worked. The miners had also been saving their money since the previous strike, in anticipation of the present contingency. A proposition to order a bituminous miner in the anthracite field to work on the mines was rejected by the convention of United Mine-Workers at Indianapolis, June 18.

Both parties to the controversy maintained a stubborn attitude; and the public, divided in opinion and sympathy, watched them with ordi-
The conference was held, but nothing was directly effected by it. Mr. Mitchell, in behalf of the miners, offered to submit the questions in dispute to arbitrators chosen by the President. This proposition the operators rejected, refusing to treat with the miners' organization. They called upon the President to use the power of the Government to restore order, and declared that with the protection of Federal troops they could operate the mines. They also offered, if the men returned to work, to submit grievances of individual colliers to judges of district courts of common pleas. On Oct. 8 the Commissioner of Labor, Mr. Wright, gave to John Mitchell the following message: "If Mr. Mitchell will secure the immediate return to work of the miners in the anthracite regions, the President will at once appoint a commission to investigate thoroughly into all matters at issue between the operators and miners, and will do all within his power to obtain a settlement of those questions in accordance with the report of the commission."

To this proposal the miners did not accede, and the situation became still more critical. A few days later J. P. Hannon, sutler, presented with the Secretary of War, the mine operators, and President Roosevelt, offered, Oct. 18, in behalf of the coal companies, to submit to arbitration by a commission to be appointed by the President and to be composed of (1) an engineer officer of the army or navy; (2) an expert mining-engineer; not in any way connected with coal-mining, to act as a test; (3) a man of the judges of the United States Court of the Eastern District of Pennsylvania; (4) a man of prominence, eminent as a sociologist; (5) a man by active participation in mining and selling coal familiar with the physical and commercial features of the business. Mining was to be resumed immediately upon the appointment of the commission, whose findings should govern the relations between the coal companies and their employees for at least three years. At Wilkesbarre, Oct. 21, the miners in convention unanimously voted in favor of this plan, which was accepted. On Oct. 23 mining was resumed at many places, and soon nearly the whole body of strikers were at work. The troops were shortly recalled. Oct. 29 was observed by the miners as a "wine day." During the strike, which lasted more than five months, the miners were enabled to hold out with little suffering by the aid of union assessments and contributions of money from friends and individuals. But in many parts of the country the effects of the strike were severely felt through scarcity and cost of coal. Even before cold weather the price of anthracite sometimes rose to $20 a ton, and it was often difficult to get at any price. Dealers in many instances could only supply their customers from day to day. Cities had to suspend ordinances prohibiting the use of soft coal. Thousands of poor persons were glad to buy coal by the paltry, and in spite of the efforts of benevolent societies and individuals to supply them in this manner, many regular dealers could not do so, many suffered at times complete privation of fuel. In some places coal was taken forcibly from railroad-cars by crowds of citizens, without interference of the public authorities. Some quantities of coal were imported from Great Britain. The famine continued through the greater part of the winter.

The arbitration commission appointed by the President, met in Washington, Oct. 24, with the following membership: Judge George Gray, United States Circuit Court, Carroll D.
Wright, Thomas H. Watkins, Gen. John M. Wilson, Edward W. Parker, E. E. Clark, and Bishop John L. Spalding. Judge Gray was elected chairman. The first conference of the commission with the parties to the controversy was held Oct. 27, on the 30th the commissioners, at Scranton, Pa., began a personal inspection of the coal-mines and an inquiry into conditions in the anthracite region. The formal hearing opened at Scranton Nov. 14, with John Mitchell as the first witness. He had previously filed with the commission a statement of the miners' case, in which several of the presidents of the coal companies had presented their replies, in which they refused to recognize or enter into any agreement with the miners' union, denied that wages paid were unfairly low, that the hours were unreasonably long, and that miners' children were forced into the breakers, and charged the union with attempting to wreck the mines. On the stand Mr. Mitchell upheld the demands of the strikers in full. He said he would not deprive non-union men of the opportunity to buy necessities of life; that he regarded the boycott as a strike; that he opposed injunctions, and held a contract to be superior to a union constitution. There was no way of punishing a member of his union, he said, except by expulsion. He admitted that miners should work at least eight hours a day, and said they should each get $800 a year. He also admitted that many boys worked in mines to support their parents, and wished that the age limit might be raised from twelve to fourteen. From the cost of hiring men, he agreed must be borne by the consumer. He presented figures to show the low wage rates among anthracite miners—40 to 60 per cent. less than those of bituminous miners. He virtually denied the truth of a vast majority of the reports of outrages during the strike. Some of the killing, he declared, was done by Coal and Iron police, and some by non-union men, while some alleged murders were, he believed, accidental deaths. He admitted, however, that the 14 men killed during the strike only 3 were members of the miners' union. Denouncing, he intimated, was done by company men to create feeling against the strikers. He denied knowledge of many things for which he had been held responsible. There was no lack of men to maintain the strike. To the proposal of a separate union for the anthracite miners he firmly objected. Mr. Mitchell showed himself so skilful under cross-examination to show that all trouble and trouble were caused by the union, and that before it came into the field the relations of the miners and their employers had been satisfactory. The mines, it was said, would have been better off. He obeyed the strike order. They denied Mr. Mitchell's charge that they were hindering coal-production, and declared that the union limits the number of men, by making it necessary for the mining companies, to say to him: "You are the best witness for yourself that has ever confronted me."

On Nov. 17 the non-union miners of the anthracite region filed with the commission their demand for increase of wages, and that no limit be put on hours of labor and earning capacity. They vigorously protested against recognition of the United Mine-Workers, recited their own wrongs, and demanded freedom from persecution and the right to sell their labor as they pleased. Subsequently Judge Gray, for the commission, announced that pending the hearing non-union miners were not to be displaced nor interfered with.

Witnesses told of boycotting and violence as the chief weapons of the strikers, of ill-treatment of non-union men, of lack of discipline in the unions, for prevention of such acts, of a reign of terror, and that the "burning of wood," which was tried in 1824 in the presence of King James I and numerous spectators. It had a capacity for 15 persons, and was moved by without further action of the commission, but this proved unsuccessful. At this time the "independents" were urging the coal companies to maintain their stand against recognition of the union. This they did, and were charged by the miners' counsel with bad faith in connection with the peace negotiations. Upon the operators' non-recognition of the union, proceedings before the commission were resumed. Several priests of the coal-district testified for the miners. Serious charges were made regarding the treatment of miners by some of the "independents," who endeavored to refute them. There were pathetic accounts of evictions and other hardships.

The Delaware and Hudson Coal Company showed that the average yearly wages of their miners was $422.68. Other companies made similar exhibits. Evidence was introduced to show that miners as a rule are well paid, better than many skilled laborers, that in the public schools their children suffer no disadvantages as compared with others, and that operators are in favor of keeping children under age out of the breakers, while some miners desire child-labor. Some of the statements as to high wages were afterward discredited.

Recalled for cross-examination, Mr. Mitchell said that he had tried to avert the strike, but acknowledged that he could have prevented it by a veto, and that union men could be punished for offenses by withdrawal of charters or by suspension. Samuel Gompers told of the benefits of union labor, but limited his approval of the boycott. The side wages, he agreed, must be borne by the consumer. He presented figures to show the low wage rates among anthracite miners—40 to 60 per cent. less than those of bituminous miners. He virtually denied the truth of a vast majority of the reports of outrages during the strike. Some of the killing, he declared, was done by Coal and Iron police, and some by non-union men, while some alleged murders were, he believed, accidental deaths. He admitted, however, that the 14 men killed during the strike only 3 were members of the miners' union. Denouncing, he intimated, was done by company men to create feeling against the strikers. He denied knowledge of many things for which he had been held responsible. There was no lack of men to maintain the strike. To the proposal of a separate union for the anthracite miners he firmly objected. Mr. Mitchell showed himself so skilful under cross-examination to show that all trouble and trouble were caused by the union, and that before it came into the field the relations of the miners and their employers had been satisfactory. The mines, it was said, would have been better off. He obeyed the strike order. They denied Mr. Mitchell's charge that they were hindering coal-production, and declared that the union limits the number of men, by making it necessary for the mining companies, to say to him: "You are the best witness for yourself that has ever confronted me."

On Nov. 17 the non-union miners of the anthracite region filed with the commission their demand for increase of wages, and that no limit be put on hours of labor and earning capacity. They vigorously protested against recognition of the United Mine-Workers, recited their own wrongs, and demanded freedom from persecution and the right to sell their labor as they pleased. Subsequently Judge Gray, for the commission, announced that pending the hearing non-union miners were not to be displaced nor interfered with.

It had a capacity for 15 persons, and was moved by
means of 12 oars, which passed through the sides by means of leather stuffing-boxes. The boat, according to the reports, was completely submerged with its whole crew and the air in the boat was “kept pure by means of liquids,” a secret that died with the inventor. An Englishman named Day in 1660 remained under the water in his submarine boat at Yarmouth for twelve hours, and came safely to the surface. In his second attempt the boat sank slowly and never was found. The inventor as well as the rest of the crew were drowned, and none of the details of the construction of this craft remain; it is only known that it was similar to the Drebble’Boat in the fact that it possessed a double bottom which could be filled with water and had to be pumped out to bring the boat to the surface. Papin and Borelli are mentioned as having invented boats in 1672, and Stapleton in 1683, but nothing is known of these attempts.

At the outbreak of the American War of Independence, in 1776, David Bushnell, of Saybrook, Conn., built a submarine boat that up to that time was the most perfect that had been invented. It was of wood, shaped like 2 turtle-shells, back to back, floating in the water tail downward, and was about 14 feet in diameter. It contained air enough to support life for half an hour, and air could be renewed at the end of that time through small ventilators (L and M) by rising to the surface. The operater was seated in the middle, the seat forming a brace between the two sides, and in this position he had his eyes opposite one of the numerous glass plates in the cover or top of the boat. In front of him was the handle of a screw (E), by which the boat was propelled; another (F), by which it was raised or lowered; a compass (D), marked with phosphorus; a water-gage (C), to show the depth, marked with oil and phosphorus; and near him the handles or treads of various small pumps and levers, by which water and foul air were expelled, the rudder moved, ballast let go, etc. The torpedo—or submarine magazine (N), as Bushnell called it—consisted of a block of oak containing a charge of about 150 pounds of powder. This block was on the upper part of the boat and connected by means of a rope to a screw (E), the handle of which was directly in front of the operator. The mode of operation was to move slowly along the surface, with the top just awash, till within a short distance of a vessel at anchor, then to sink, and, coming up underneath the bottom, fasten the torpedo by means of the screw. The torpedo and screw were then detached from the operator’s boat, a clockwork mechanism inside the torpedo being set going at the same time. This clockwork could be set for six, eight, or twelve hours’ run, thus allowing the operator ample time to make his escape. The boat was fitted with a rudder (G), with water-ballast tank (O)—with a valve (X)—to admit and a pump (P) to draw out the water—and was kept stable by fixed ballast (A) and a removable lead weight (B), which when detached by the operator enabled him to come quickly to the surface at any time. In 1778 it is reported that a Continental officer, Sergeant Ezra Lee, attempted to attach the torpedo to the British ship Eagle, then blockading New York harbor. But the attaching screw came in contact with some iron part of the ship’s body, and in attempting to get another position under the ship he lost his way under the water and had to discontinue his efforts at daybreak. On his return he feared that he had been discovered by the enemy and therefore disconnected the torpedo from the boat in order to lighten her and increase his speed. An hour after his return the mine exploded. The clockwork in the mine was supposed to start at the moment of detaching and had been set for twelve hours. The assertions made by Lee could never be verified, and it is therefore very probable that in the beginning he had become frightened and had set the torpedo adrift, and then waited at the surface of the water for daybreak.

Robert Fulton, the builder of the first steamboat, began to experiment with submarine navigation in 1797, and, after interesting Napoleon Bonaparte, then Consul, in the project, he completed, in 1801, his boat, the Nautilus. This was crudely cigar-shaped, 21 feet 4 inches long, with a mean height of 6 feet, and was built of wood, sheathed with copper and hooped with iron. On the top was a dome with ports for observation. The keel was a heavy bar of metal, which served to keep the boat in equilibrium. When at the surface it was propelled by a sail; when diving the mast was folded downward, and, with the sail, was stowed in a groove in the top of the ship’s body. Under water it was propelled by a screw, which the crew turned by means of a crank, with a multiplying motion. The diving and rising to the surface was effected by the filling or pumping out of water in the ballast-tank, which was built in the craft. A rudder was placed at the after and an anchoring device at the forward part of the boat. In June, 1801, the Nautilus received a trial in the Seine, at Paris, and then was taken to Brest, where the inventor, with three men, remained an hour under water at a depth of 24 feet. On Aug. 7, 1801, they remained under the water for four hours and twenty minutes by taking a vessel of compressed air with them. He attached a mine to a pontoon and exploded it. Nevertheless the French Government, as well as the English Government, to whom he applied afterward, decided not to follow up the work.

In the twenty years following 1844 Lodner
PHILLIPS, a shoemaker of Michigan City, Ind., made several successful experiments with boats of his own invention. The four men largest boat, built in 1864, was of boiler iron, with iron frames, cigar-shaped, and about 90 feet long. It was provided with water-ballast tanks, which were emptied by compressed air, stored in pipes along the under side of the vessel. It was propelled by man-power, and, according to report, in it he made many descents, sometimes taking with him his entire family. He endeavored to sell this boat to the United States navy and subsequently to the German navy, but it was refused by both.

The only use of the submarine boat in actual warfare was on the night of Feb. 7, 1864, when the National sloop Housatonic was blown up and sunk in the harbor of Charleston, S. C., by the Confederate submarine David. This boat was built by McClintock, of New York, and was of boiler-plate. The crew consisted of 8 men, of which 1 man was at the helm, and the other men turned the 2-bladed propeller by means of cranks. The boat was supposed to have attained a speed of 4 knots, and to dive to any depth, and remain there a half-hour with the whole crew in quiet water, although authentic reports of her speed and depth, have been far to agree with this assertion. The idea of the boat was to tow a mine close under the keel of an anchored vessel, and explode the mine through contact with the bottom of the vessel. Lieut. Paine, of the Confederate navy, with 8 volunteers, undertook to attack the Union vessels. While the boat was being prepared the swell of a passing steamship splashed into the hull and caused a leak, sinking her. The 8 volunteers were lost, and Lieut. Paine succeeded in getting out, as he was standing at the manhole at the time. After the boat had been raised, Lieut. Paine made another attempt with 8 other volunteers, but the boat ran ashoar at Fort Sumter and capsized. On this occasion there were 6 men lost of the crew, and only the commander and 2 men were saved. After the boat was raised for the second time and put into shape, an engineer named Aukley, who had been building the reconstruction, attempted a trial trip in October river. While on her trip, he changed his apparatus for getting to the surface must have become deranged, as the boat did not rise again, and it was only recovered three days later. The entire crew were, of course, dead. The next trial was undertaken by Lieut. Dixon, of the Twenty-first Volunteer Regiment. He left the harbor with 8 volunteers on Feb. 17, 1864, and succeeded in destroying the Union sloop Housatonic, which lay at anchor in the outward harbor of Charleston. He had somewhat changed his plans, as the attack was not made by means of mines, but was made with a pole torpedo; also the boat was not entirely submerged. During this time the manhole was left open so that the men could breathe more easily. Aboard of the Housatonic the boat first gave the appearance of a floating block of wood, and the crew of that vessel only became aware of their danger when it arrived within about 900 feet. They immediately slipped their anchor and started the engine, and called the crew to the guns, but before a shot could be fired—it was about two minutes after the boat had been sighted—the explosion occurred, and the Housatonic sank. Ranking only 5 men were killed; the remaining saved themselves by climbing into the rigging, which projected above the water. The submarine boat, however, did not explode, and was afterward raised from the bottom of the vessel. It was the first real attempt to build a submarine boat, and it caused it to sink, and for the last time its entire crew were buried under the waves. The Confederates had lost 5 men, which would not speak very well in favor of the submarine boat.

With the experiments of Wilhelm Bauer, a Bavarian officer of artillery, the first period of submarine-boat building—that of small boats impelled entirely by man-power—came to an end. Bauer finished his first boat late in 1850. It was a cigar-shaped, 25 feet long, beam 6 feet, and height 9 feet, built of 4-inch iron with iron frames and impelled by a large wheel, balanced with weights and geared to the propeller. In 1851, it was launched in the harbor of Kiel, February, 1851, it leaked and sank, and Bauer and his crew of 2 men escaped drowning almost by a miracle. The highly compressed air in the hull was forced open in the top of the vessel and the 3 men were shot to the surface in the air-bubble. In 1855, at the instance of the Russian Government, he built a second and larger boat, 80 feet long and 12 feet at its greatest diameter. The plan was practically the same as that of the first boat excepting that for the 22 tons of iron ballast he substituted water ballast. It took 12 men to drive the boat, and fresh air was supplied by carrying compressed oxygen in flasks, and by a spray of sea water forced into the boat. Experiments with this boat were carried on until 1860, and at one time Bauer is said to have stayed under water with his 12 men for nearly twenty hours, but it was finally rejected by the Russian navy. He afterward attempted to interest the Prussian navy in a scheme for a large submarine boat, but failed to convince the Government of its availability.

In 1863 an American inventor named Alstitt drew plans for a submarine boat that, although it never was constructed, showed the feasibility of the building of such craft. Alstitt proposed to use, when at the surface, an ordinary steam-engine, and when diving, after the smoke-stacks had been sealed, to depend upon electricity for his power. The boat was to carry water ballast and cylinders of compressed air for ventilation during submergence, and thus involved nearly all the essential features of the modern day submarine. About the same time Admiral Bourgeau and Constructor Brun, of the French navy, were working out their Plongeur, which was launched at Rochefort in May, 1863. It was 140 feet deep, and 20 feet wide, and had an engine driven by compressed air, which was stored in tanks distributed throughout the vessel, the exhaust of which served the crew for ventilation. Two novel features of the Plongeur were the return to the use of the vertical screw in an attempt to control the depth of the dive when water was let into the ballast spaces, and the peculiarly constructed main- hole, which was a life-boat set into a depression in the top of the vessel, and connecting with the interior by water-tight doors, and which could be readily detached from the body of the larger boat. It also had a pair of horizontal rudders at the stern. In its trials, owing to its great length, it proved itself very unstable when sailing submerged, and was soon put out of commission.

In 1868 Herr Vogel, of Dresden, had built a boat with an iron shell 16 feet long and 4 feet in depth, driven by a 3-cylinder steam-engine. The boiler itself was heated by hot air from a chimney, and was soon put out of commission. He claimed for his boat that it was able to remain
submerged for three hours, but up to 1872 it appears never to have received an under-water trial. The Russian engineer built two boats: one in 1877, 13 feet long, driven by trestles, geared to a propeller, and carrying a single man, who by means of water-proof leather gloves commanded a dome on the top of the boat that was supposed to attach mines to the vessel attacked; and another in 1879, 20 feet long, carrying 4 men in addition to the commander. They had the usual water-ballast tanks, and a device of weights operated by chains and sliding the full length of the boat to trim it to the angle desired in diving or rising to the surface. In 1884 he built a larger boat, of the same principle, driven by a motor and storage-batteries, which was favorably reported on by the Russian Government.

In 1884 Prof. Joseph Henry Tuck made experiments with a submarine boat, 30 feet long, that contained no essentially new constructive features. It was driven by a dynamo and storage-batteries, and is said to have attained a surface speed of 5 knots. It carried 2 Fish torpedoes, attached one on each side by magnetic claws, that could be operated from the interior of the boat to release the torpedoes at the proper moment. In 1888 Tuck built another boat, which he called the Peacemaker, 30 feet long, 81 feet beam, and 53 feet deep. She was propelled by a 14-horsepower steam-engine, and attained a surface speed of 8 knots. On either side of the dome and at both ends were water-proof gauges, as in Drezewski's boat. She also carried torpedoes in magnetic claws in the same manner as Tuck's first boat. While she made several more or less successful trials, she was never accepted, and the experience of her construction seems she finally failed to interest the United States Navy in carrying on experiments with her.

Waddington, at Liverpool, in 1886, exhibited a boat using electricity as the motive power. It was fitted with 4 vertical propellers, 2 on a shaft, placed in wells, 1 forward and 1 aft of the main compartment of the boat. It also had 2 large horizontal rudders, 1 on each side, amidships, and horizontal and vertical rudders and a screw-propeller aft. The 45-cell storage-battery was placed on the port side, and the air in the dome at the surface a speed of 8 knots for ten hours. There were separate motors for each of the vertical propellers. The end compartments of the boat were reserved for the air for renewing the air of the boat if it became necessary. The surface trials of Waddington's boat were reported satisfactory, but it is not known whether any submarine tests were made. In November of the same year a boat designed by Andrew Campbell was tried in the West India Docks, London. It was 57 feet long, had a maximum diameter of 7 feet and a displacement of 53 tons when fully submerged. It had twin screws driven by 45-horsepower electric motors, and was fitted with an ingenious system for increasing and diminishing the displacement in order to dive or rise to the surface. Four horizontal cylinders, 20 inches in diameter and capable of being pushed out about 20 inches, were placed along each side of the vessel, which, when so pushed out, increased the displacement by about 1 ton. These projecting cylinders would, of course, be a great detriment to speed at the surface, and there are no reports further than the speed was successful in sinking and raising the vessel.

Nordenfelt completed his first boat in 1885. It was 64 feet long, 9 feet beam, and 12 feet deep, with a ton displacement. At the after-end was a vertical rudder and the 4-bladed screw propeller, and at the forward end a pair of horizontal rudders balanced by weights. By this device Nordenfelt largely overcame the fore-and-aft unsteadiness that had bothered his predecessors, and which to-day is not entirely unavoidable. The boat was also fitted with vertical driving propellers, 1 on each side amidships, operated by separate engines. The speed of these propellers was regulated by a complicated mechanism, controlled by a piston actuated upon the pressure of the water outside the boat. The boat was propelled by a 100-horse-power compound surface-condenser steam-engine. When at the surface steam was generated in an ordinary Scotch boiler, using coal as fuel; when diving, superheated steam was drawn from 2 tanks, in the ends of the vessel. There were 3 other compartments: the central one occupied by the crew, and the other 2 for the engines and the boiler. At the surface air was forced into the boat by a small ventilator fan in order to reduce the temperature, when submerged the currents of cold water outside the shell were depended upon for the same purpose. The trials of this boat were more than ordinarily successful, and several of the European countries immediately took an interest in it. Nordenfelt was soon commissioned to build boats for Greece, Turkey, and Austria, and undertook and carried out elaborate experiments with this type. The 2 Greek boats had their official trials in the Bay of Salamis in April, 1886, and while as there were no official accounts of the time would lead one to believe that they fell far short of requirements. The Abd-ul-Hamid and Abd-ul-Medshich were delivered to Turkey in January, 1887. They were 100 feet long and had a displacement of 180 tons, and were impelled by 250-horse-power compound engines. They were fitted with vertical propellers fore and aft, and the horizontal rudders, in addition to being balanced by heavy pendulums, were capable of being controlled from the conning-tower. They each carried 2 torpedoes, forward on the top of the boat. At the trials at Constantinople they succeeded in making 8 knots at the surface and from 4 to 5 knots below. It is a significant and not altogether encouraging fact that in the war of 1897 neither Greece nor Turkey evinced sufficient faith in these apparently powerful vessels to put them into active service. Nordenfelt's last boat was built for Russia, at Barrow, in 1887. It was 120 feet long and had a displacement of 160 tons at the surface, and of 250 tons when submerged. It was fitted with 2 conning-towers, and the upper part was protected by 1-inch plate from machine-gun fire. Its coal capacity was 8 tons, which could be increased to 28 by removal of the water ballast, sufficient for a 1,000-mile run at a speed of from 8 to 9 knots. She was lost in a storm in the Baltic Sea in January, 1888, while on her way to Russia after her trial off the English coast.

The essential feature of the Baker boat, invented by George C. Baker, of Detroit, and for a time under consideration by the United States Navy, was its 2 propellers, 1 on each side, amidships, on a transverse shaft running through the center of gravity of the boat. The gear-casings were so fitted, by means of a worm-gear and a sprocket-chain, that the casings could be swung through an angle of 90°, and the thrust developed by their rotation directed at will in a plane perpendicular to the shaft. Submergence was effected and maintained by giving the screws a sufficient angle to overcome the buoyancy by the vertical thrust, with a resultant forward thrust. The boat, which was tried Nov. 20, 1892,
was of wood, covered with canvas and sheet-iron, 46 feet long and 9 feet deep. At the surface it was propelled by a steam-engine, and when submerged by a 50-horse-power electric motor, fed by 232 storage-cells divided into 4 main batteries, which could be connected singly or together in order to vary the speed of the boat. At the surface the batteries could be charged by converting the motor into a dynamo. Baker made some improvements and experimented through the summer of 1893, but the propellers were so wasteful of power and the boat itself so unstable that it never attained success.

In 1897 Simon Lake, of Baltimore, began the construction of a boat, with which he made very successful trips under water. His boat, christened the Argonaut, was originally intended to assist the work of divers on sunken vessels, and when submerged, to roll on wheels upon the bottom. It was 36 feet long and about 8 feet in diameter. The 30-horse-power naphtha motor drove the propeller when the boat was sailing at the surface and the wheels when on the bottom. No. 1, 1902, Lake launched his third boat, the Protector, and the first torpedo-boat of this type, at Bridgeport, Conn. She is 65 feet long, 11 feet wide, and 14 feet deep, and can descend to the depth of 150 feet. She can travel on the surface, or with conning-tower awash, or at any desired depth within the limit of 150 feet, or on the bottom, where a wheel is driven to propel the boat. There is a compressed-air lock which permits of divers leaving the boat while she is submerged. She has a sufficient fuel-carrying capacity to make a submerged run of 1,500 knots, or 1,500 miles. The boat has a speed of about 10 knots. She is equipped with a storage-battery capacity sufficient for a submerged run of 50 miles on one charge of the batteries, and has means for recharging the batteries without going to the surface. She carries 3 torpedo-explosion tubes, 2 at the bow and 1 in the stern. One of the dangers and difficulties in running submarine boats mid-distance between the surface and the bottom has been to keep them on an even keel. Most of the boats have shown a tendency to dive or tip back, especially when any of the crew shifted weight from one point to another. In the Lake boat this trouble is obviated by the use of hydroplanes, which serve the same purpose in the water as aeroplanes do in the air to keep a flying-machine horizontal. It was the purpose of the inventor after trial trips on Long Island Sound to take the Protector to Washington for the inspection of the Navy Department.

In 1887, and again in 1888, Hoeggsard, a Danish naval officer, submitted plans for large submarine boats which have never been followed out. These were to use steam and electricity for power, and to carry a life-boat attachment similar to that of the Plongeur. A boat built after plans by Isaac Peral at the Cadiz Navy-Yard in 1888, was 72 feet long and of about 60 tons displacement, and had 2 screw propellers driven by a 30-horse-power motor charged by a battery of 480 storage-cells. It had vertical propellers similar to Nordenfelt's, each driven by a 5-horse-power motor, supplied from an auxiliary battery of 120 cells. It carried a torpedo-tube and had an armed prow.

In the past fifteen years France has expended more in time and money in the investigation of submarine boats than any other country in the world. Among the first of these more recent experiments were those with the first Goubet boat, launched at Cherbourg in 1889, which made 2 miles in May and June, 1891. The entire boat (16 feet 4 inches long, 3 feet 3 inches beam, and 5 feet 10 inches depth) was cast in bronze in a single form. She had an armament of 2 guns, each weighing 5 tons, carried a crew of 2 men, who sat back to back with their heads in the conning-tower and directed the movements of the boat. Under the seat was a receiver of compressed air to renew the air-supply. The propeller was driven by an electric motor, and in case of necessity could be turned by hand. The water-ballast space was divided into small compartments connected by small holes, so that the ballast would not shift suddenly. On either side of the craft were fin keels to increase her stability, and a vertical rod at the bow served as a sight to steer by. This boat was small and the trials did not satisfy the inventor, and he built a second boat 26 feet long, using the depth of 150 feet. Boat No. 2 was cast of bronze in 3 pieces, which were joined together by flanges inside. It attained a speed of 5 or 6 knots. It carried 7 tons of lead as permanent ballast and had 2 torpedo-tubes. Of the 2 boats designed for the French Government by Gustave Zédé the Gymnote was built at Toulon under the direction of Constructor Romazotte, and launched in the autumn of 1888. It is 56½ feet long, 6 feet in maximum diameter, and has a displacement when submerged of about 60 tons. The power is supplied by a 52-horse-power electric motor, with a 540-cell storage-battery, which together weigh about 12 tons. The forward and after ends of the boat contain the ballast tanks, which are emptied and filled by an electrically driven pump. She is fitted with vertical and horizontal rudders aft, and carries a torpedo-tube with compressed air-tanks for-launching torpedoes. No provision is made for renewal of the air, as with her crew of 6 men she could stay under for several hours without inconvenience. This boat is said to make an average surface speed of about 8 knots, and with one charging of the batteries to have a radius of action of from 40 to 100 miles. Zédé's second boat, La Sirène, was launched at Toulon in May, and after the death of its designer called after him, the Gustave Zédé, is 147½ feet long, 581
SUBMARINE BOATS.

655

counterpart would drive the boat at a maximum speed of 8 knots in the partially submerged condition. The water ballast and the rudders are arranged as in the Guppy, and in addition, tanks for the torpedo-tubes compressed air is supplied for artificial renewal of the air in the boat. Both these boats have received extensive and thorough trials; the utmost secrecy is preserved in regard to their movements, but it is generally understood that they do not come up to the expectations of their inventors in regard to speed, and they are proportionate in the length they are very unstable when sailing submerged. This would seem to have influenced a return to a smaller type of boat, for the Morse submarine was launched at Cherbourg, July 8, 1899, is only 116 feet long, 9 feet in greatest diameter, and displaces 148 tons, while the first Laubeuf boat was even smaller. The Morse derives her power from a 350-horse-power electric motor, and is said to average about 10 knots in the light condition. It can not really be called a submarine boat, as it is only intended to float on the surface almost entirely submerged. Laubeuf in his boat designed in 1899 adopted an engine using oil-fuel when at the surface and storage-batteries for submarine work, and thus gained a great advantage over the electrically driven boats, whose radius of action is limited by their necessity of remaining near a central station for recharging the batteries. Most of the later types of boats now under consideration and trial in various countries are based upon this 2-power system.

What Goubet and Zédé did for the development of the submarine boat in France Mr. J. P. Holland, on account of his experience in the United States, and the acceptance of the first of 6 boats made upon his plans for the United States navy is but the successful culmination of a long series of disappointments. Holland made his first attempt in 1871 with a boat 3 feet by 2½ feet in cross-section and 14 feet in length. It had a double bottom, a 4-horse-power oil-engine of 50 horsepower. His second was a large craft 37 feet long and 6 feet in diameter, driven by a 15-horse-power engine, and carrying 2 men. It was fitted with a 9-inch Zalinski gun. His third was a boat 44 feet long and 2½ feet in diameter, and without damage at its first test. The fourth boat, 40 feet in length and about 8 feet in diameter, brought Mr. Holland's invention more prominently into notice than any of his previous craft. On March 3, 1893, Congress authorized the construction of a submarine of the Holland type, and the contract for the hull and machinery was let for $150,000. This boat, named the Plunger, was to have been 84 feet long, with a maximum diameter of 11½ feet and a displacement at the surface of 148 tons and in a submerged condition of 165 tons, and when submerged to have a buoyancy of one-third of a ton, counteracted by 2 vertical propellers. The hull was to be built so strong that it could stand to be immersed to a depth of 75 feet. For sailing on the surface at light draft a water-tube boiler of 9,850 square feet of heating surface, using oil as fuel, supplied steam at a pressure of 150 pounds per square inch. The boat is 800 horse-power, driving the 2 wing propellers, while a third engine of similar construction and developing 300 horse-power drove the middle propellers. While the boat is in the double bottom and below the axis is driven by a single 70-horse-power electric motor, which could be connected to either one of the 3 propellers at will. The 2 vertical propellers were likewise to be driven by a 200-horse-power electric motor. The 2 border propellers were to receive their current from storage-batteries, which could be charged by a dynamo connected to either engine when the boat sailed at her light draft, or she was to be carried on board, and used only for replacing the foul air, but also to force out the water ballast. This boat, however, never was completed, and when she was found to be unsatisfactory the contractors refunded the money advanced upon her, and work was begun upon a second Plunger, after improved designs by Mr. Holland, to replace her. The sixth Holland submarine, the Holland, was built as a private venture at the Crescent Shipyard, Elizabethport, N. J., and is 53 feet 11 inches in length, 10 feet in diameter, and has an arrangement of 74 tons when submerged. When on the surface she is driven by a single-screw, Otto gasoline-engine of 50 horse-power, at a speed of 8 knots an hour. When submerged, she is driven by an electric motor of 50 horse-power. Her armament consists of a torpedo-tube which lies approximately on the longitudinal axis of the vessel and a dynamite-gun which is upwardly inclined and is intended for the discharge of high-explosive shells when the vessel is submerged. The Holland was purchased after trial by the United States Government in 1900 to be used for training seamen, and in experimental tests. Much useful data has been gathered from her which will be incorporated in future vessels. On June 7, 1900, Congress authorized the construction of 8 more submarines of the Holland type. Of these, 2, to be known as the Grampus and the Pike, have been constructed by the Union Iron Works, San Francisco, Cal., and the other 4, known as the Adder, Moccasin, Porpoise, and Shark, at the Crescent Shipyard. The contract price for each of these boats is $170,000.

The diagram on the next page will show very clearly the construction of these boats and the arrangement of the various parts of their machinery and fighting equipment. They are 63 feet 4 inches over all, 11 feet 9 inches maximum diameter, and displaces submerged 120 tons. The motive power consists of an axis single-screw, 4-cylinder, Otto gasoline-engine, which is capable of giving the craft a speed of 8 knots on the surface, and a 70-horse-power electric motor, which gives the boat 2½ knots underwater when awash or submerged. The hull is circular in cross-section and is divided by 2 water-tight bulkheads into 3 separate compartments. There is also a thorough subdivision of the bottom, and every precaution is taken to localize any injury to the hull which might threaten the buoyancy. In the forward compartment is a torpedo-tube for the discharge of 45-centimeter Whitehead torpedoes. The tube is placed with its muzzle in the nose of the craft and its axis inclined somewhat to the longitudinal axis of the vessel. The muzzle of the torpedo-tube is closed by a water-tight door, which can be lifted from within for the discharge of torpedoes. In the same forward compartment are a series of air-flasks, a gasoline-tank of 850 gallons capacity, a compensation tank which will be filled with a sufficient amount of water to compensate for the loss of weight due to the discharge of the torpedo, and one of the trimmers. The entire compensation compartment contains in its double bottom the main ballast tank and a circular compensating tank between the two sets of batteries. Above the double bottom and below the axis on each side are located the storage-batteries. These are charged
by the gasoline-engine running the electric motor as a dynamo when the vessel is at the surface. Above the storage-batteries are carried the torpedoes, which are 45 centimeters in diameter by 11 feet 8 inches in length, and in the same compartment are a series of air-flasks, in which air at 2,000 pounds to the square inch pressure is stored. In the rear compartment is the 4-cylinder gasoline-engine, which is rated at from 160 to 190 actual horse-power, at from 330 to 390 revolutions per minute. Its net weight is 1,300 pounds. Its length over all is 9 feet 7 inches, and its total height above the crank-shaft center is 5 feet 6 inches. In these engines, which have given great satisfaction in the Holland, the distribution of the cranks and the timing of the valves and igniters are so arranged that the operations in the 4 cylinders alternate; so that while 1 is on the expansion stroke the other 3 are on the suction, compression, and exhaust strokes respectively. By this arrangement the engine is perfectly balanced and vibration is reduced to a minimum. In the construction of the vessels care has been taken that all portions of the exterior of the hull shall be free from projection of any kind that might be entangled by ropes or other obstacles when submerged. The lines of the vessels have been designed so that there shall be a minimum of resistance when they are running at the surface. The radius of action at the surface is about 400 knots, and the storage-batteries have sufficient capacity for a speed of 7 knots on a four hours' submerged run. Gearing is provided for driving the propeller direct from the gasoline-engine or connecting the engine to the main motor, accommodations being effected by means of suitable clutches. The submersion of the vessel is achieved by means of ballast tanks and a pair of horizontal driving rudders at the stern. For keeping her submerged at desired depths, use is made of the trimming and ballast tanks above described, and it is claimed that the control in this respect is very satisfactory. The air-supply and ventilation are secured by means of compressed air stored in the tanks referred to, while the gasoline vapors from the engines and, indeed, all noxious gases are carefully excluded by suitable devices, while safety-valves are provided to prevent the pressure in the vessel from exceeding that of the atmosphere. Provision is also made for automatic control of the rudders, for the purpose of preventing the vessel from taking excessive angles when diving, or coming to the surface, and also for keeping the boat submerged at the desired depth.

The vessels are controlled from the conning tower above the working platform, which is protected from the rapid-fire guns of the enemy by 4 inches of Krupp steel.

After the acceptance of the Holland by the United States Government and the order for the building of other and larger craft the Electric Boat Company, which builds and operates the Holland boats, built a smaller craft on the same lines as the Adder, Moccasin, etc., to be used for experimenting. She was about 70 feet long and 20 feet at her greatest diameter, and was named Fulton. After several successful trials, upon one of which her crew spent a night in her in the bottom of Peconic Bay, she left New York on the morning of April 28, 1902, for Norfolk and Washington by the sea route, convoyed by the yacht Mindora and the tug Storm King. At ten o'clock on the following morning, while rounding the Delaware Breakwater, a violent explosion occurred on board, wrecking the interior...
and injuring 5 of her crew. The boat had behaved splendidly throughout the trip, making several dives and surfacing without any accident. The explosion was caused, as determined by the examining board, by hydrogen gas from the storage-batteries that collected in the boat and set fire to the fuel stored there. The boat was brought back to New York, and it is the intention of the company to refit her as soon as the regular Government work is completed.

The Adder was the first of the new boats to be completed. In the early part of May, 1902, she was towed, by the way of the Delaware capes and Norfolk, to Washington, and received her first trials in the Potomac city. The Moccasin was completed soon afterward, the Grampus made her first trip at San Francisco, Nov. 3, 1902, and the other boats are all nearing completion. Captain C. F. Bailey, of the submarine depot, and Capt. G. F. Landers, instructor in the depot of electricity, mechanism, and mines, of all of Fort Totten, watched the tests, which have been passed by the given any battleship intended for the United States navy, with interest in view of the possibilities of the use of the submarine boat as a means of harbor defense. The boats were required to make 12 runs on the surface under the gas-engine only, over a mile, half the runs with the tide and half against it. The average speed of 8 knots an hour must be attained on these runs. Awa-sh the boats make 2 runs of a mile with the tide, and an equal number against it, the average speed to equal 7 knots, the gas-engine only being used. In a completely submerged condition, the crew and 2 observers from the trial board, and no portion of the boat is exposed, but a light mast is carried to show above the surface, so the trial board can observe the time and the range. On these trials the boats make 4 runs for each of the 3 different speeds over a course of half a nautical mile, 2 with and 2 against the tide, the averaging speed to equal 7 knots. Over a course of 10 knots the vessels were required to make 8 knots an hour on the surface and 7 knots an hour below. In the torpedo trials the vessels were required to run 2 miles under water and at the finish discharge a torpedo which shall strike a target 150 feet long by 15 feet deep, placed across the course, representing the vital of a battleship. The boats for observations more than 3 times from the time of starting until the discharge of the torpedo for the duration of each period of observation not to exceed one minute. The endurance trials consisted of a surface run of twelve hours' duration at full speed of 8 knots under the gasoline-engine, and 1 of three hours hermetically sealed under the electric motor at a speed of 2 knots.

The Adder made an average speed on the surface of 8.5 knots an hour when running in the light condition, in the awash condition she made 2.16 knots, and by 0.22 knots a minute. In her trial on Nov. 14 the Adder, after taking position on the course and getting under way, ran for a mile submerged, then turned and returned to the starting point. She fired her torpedo at a mark 150 feet long and 15 feet deep representing the vital part of a battleship. The turn was made when she was completely submerged, and in the home run only two observations, lasting thirty seconds each, were taken, one of them soon after the turn, and the other between the half and the quarter-mile flags. After the second observation she remained invisible, with no indication of her whereabouts, except when she fired her torpedo, the course of the torpedo being indicated, as it always is, by the trail of bubbles of compressed air from her engine rising to the surface. The torpedo went a few feet wide of the mark, but it was asserted that the divergence was due to the swerving of the torpedo, and not to faulty aiming from the Adder. In any case, it had been in actual warfare the torpedo would have struck a ship in the same position well within the bow or the stern and would have proved effective. In Nov. 14 the Adder submerged run of three hours, and the distance traveled nearly 21 knots. Naval-Constructor Woodward, one of the officers of the Inspection Board, stated that the air, excepting during the last twenty minutes of the run, was extremely fresh, and even in the latter period it was as fresh as the air on the berth-deck of a battleship. Subsequently the engine passed satisfactorily the test of a continuous run of twelve hours' duration. The run was made entirely under the electric motor. The batteries were charged to their capacity of 1,900 amper-hours, and about 500 amperes an hour were used. At the end of the run the batteries showed a further capacity of about 400 amper-hours, and the voltage had been reduced from 120 to about 100. Although she was required to run but three hours submerged, it is estimated she could have run almost another hour before exhausting the capacity of her batteries. Reducing the consumption of power, it is estimated that the Adder could have made 125 knots under her electric motor at 3 knots an hour.

At the request of the board a periscope was attached to the boat in one of these tests to try its efficiency. This device, used with much success in the boats of the French navy for ascertaining the position of objects on the surface when the boat carrying it is submerged, consists of a mirror at the top of an iron tube about 15 feet above the deck amidships, its lower end being in the hold of the boat, where the observer stands. The reflection of objects on the surface is conveyed to him by a system of lenses. This iron tube interfered with the trial, for its local attraction threw the compass out of adjustment, and it also retarded the speed of the boat sufficiently to upset slightly the calculations of Capt. Cable while steering under water. In the final report the board recommended invention toward the improvement of this device. The tests of the Moccasin were equally successful. She exceeded the required speed in both the surface and awash tests, and in her speed trial when submerged she made the remarkable record of 7.28 knots, making her the fastest submarine boat in the world. At her torpedo trial a heavy sea was running, driven by a stiff east gale, and the water looked like a rock awash. Going at full speed, the Moccasin
approached the 2 flags marking the beginning of the mile. A few seconds before she reached them, at 1:25 P. M., she made her dive, and then for more than ten minutes nothing was seen but about 4 feet of the 12-foot mast she carries, with a tiny red flag on top, as it pushed its way through the water; turning at the mile in twenty seconds, she began her return trip over the mile course at the same depth and going as straight as if the helmsman's head had been above the surface of the water. Rising for thirty-five seconds just after the mile-and-a-half mark was passed, Capt. Cable took a peep at the flags marking the place where the imaginary war-ship that he was to destroy was placed. The porpoise-shaped nose of the lit-

The amount of the penalty will be refunded if the other submarine boats exceed the speed re-

requirements.

Of the nations leading in the construction of submarine boats at the close of 1902 France had built or building 44, Great Britain 10, and the United States 7. Norway has adopted the Hol-

land model, and the De Schelde Ship-Building Company, of Flushing, has obtained from the American owners the right to build Holland sub-

marine boats for the Netherlands and Dutch In-

dies for twenty-five years, including the use of all existing and future patents issued to the Amer-

ican company.

Portugal is negotiating for the Holland boat,

tle boat came to the surface a few minutes later for a second peep of thirty seconds, and the next time her bow came up it was to fire the tor-

pedo. She pointed fairly between the 2 flags at the end of the mile and about 100 feet away when the torpedo shot out of its tube about 3 feet below the water-line. For some reason the mech-

anism of the torpedo made it describe a course to the left of the intended mark. That was no fault of Capt. Cable or his crew, for they fired the missile absolutely straight. Those who watched it say that it would have struck a ship even though its flight had been somewhat erratic.

The board, in reporting, Dec. 1, 1902, on the Adder, found that the vessel successfully met the contract requirements and recommended its ac-

cceptance by the Government, though it recom-

mended further tests and some minor structural changes. Jan. 10, 1903, it was announced that the submarine torpedo-boat Adder had been accepted by the Government, subject to a penalty of $800 for failure to comply with certain requirements.

and several other governments have made appro-

priations for purchase and experiment. Of the British boats, 5 are of the Adder-Moccasin type. The first of these was launched in September, and partici-

pated in the naval maneuvers at Port-

mouth, and while the officers in charge maintain the utmost reticence as to details, it is generally understood that the tests were satisfactory. Nov. 25, 1902, a new type of boat, the joint invention of Messrs. Vickers Sons & Maxim, who are also building the Holland boats, received its unofficial tests in the Irish Sea. In its speed records it is reported to have exceeded the first of the Holland boats, though no figures have been given out.

It is also announced that a company has been formed under the title of the British Submarine-

Boat Company which has acquired the patents of the well-known French inventor M. Claude Goubet, 2 submarines already built by him, and all his inventions relating to submarine naviga-

tion. In addition, the company has secured the services of M. Goubet, his son, and another
trained assistant, who will henceforth live in England and carry on the work of building Gou- bett submarines.

When Admiral von Tirpitz was in the United States, serving upon the staff of Prince Henry during his visit, he said that Germany was not ready to set her inventors at work upon subma- rine boats, preferring to use all her constructive ability in improving her battleships and cruisers. Nevertheless, she is giving some thought to the subject, and her first boat was delivered in September, 1902. The details of its construction have been kept secret, but it is understood that it is built after a combination of the plans of the Hohenzollern and the Scylla. It is a small boat, about 35 feet in length, and was built in the United States.

France is experimenting, with as nearly abso- lute success as its means will allow, with new inventions, and during the year the Ministry of Marine has given orders for several new types of boat. They also announce the invention of a telescopic periscope the organisms to survey the surface from a depth of 15 meters. The maximum depth permitted by the former instrument was 9 meters.

During the naval maneuvers off Hyères, in Au- gust, 1903, on the French Mediterranean coast, the submarine boats Gustave Zéédé and Gymnote were sent out from the harbor to attack the fleet representing the enemy. Traveling at a depth of 10 to 15 feet below the surface, they reached the fleet and "torpedoed" 3 battleships, the crews of which were unaware of the presence of the subma- rines until the "torpedoing" was done.

SUNDAY-SCHOOL CONVENTION, IN- TERNATIONAL. The tenth International Sunday-School Convention met at Denver, Colo., June 26 to 30. The Rev. B. B. Tyler, D. D., of Denver, was chosen presiding officer for the ses- sions. The general secretary's report presented a survey of the past three years of Sunday-school work in affiliation with the convention. There were now 35 paid workers in 45 associations. In educational work, 1,300 normal classes had been reported, with 14,000 members, and the organized work was in excellent condition. The organiza- tion of the last State, Nevada, had just been completed, and the organization of the departments had just been reported. More than 125,000 members had come into the churches from Sunday-schools dur- ing the past year. Statistics were presented showing that in the United States there were 130,920 Sunday-schools, with 1,414,589 teachers and 11,462,414 pupils; in Canada, 10,220 schools, 83,156 teachers, and 865,870 pupils; in all North America, including, besides these, Newfoundland and Labrador, Mexico, the West Indies, and Central America, 152,959 schools, 1,511,188 teachers, and 12,297,405 pupils; and in the whole world, 234,601 schools, with a total membership of 23,856,582 teachers and pupils. A report of the work done in the South under the direction of the late Rev. L. B. Maxwell, field secretary, re- lated to the organization of the international work among nearly 2,000,000 colored people. The Lesson Committee reported that the total expense involved in its last three years' operations had been met by 27 publishing houses, and that for the next triennium $14,000 had been pledged by individuals and delegations for the international field. An important question was raised as to the advisability of setting up a separate institution for the intermediate classes. A begin- ner's course has already been tentatively used, satisfactorily, for one year. The report of the Lesson Committee favored the adoption of the graduated system, with the beginner's course, and a course for advanced classes, dealing with the prophetic, epistolary, and apocalyptic parts of the Bible, and was accompanied with the outline of an experimental course for two years. The plan of the committee was not adopted by the convention, except that it authorized the prepara- tion of a series of special primary lessons. It directed that "one uniform lesson for all grades of the Sunday-school shall be selected by the Lesson Committee as in accordance with the usage of the past five lesson committees; provided that the Lesson Committee be authorized to issue an optional beginner's course for special demands and uses, such optional course not to bear the official title of International Lesson. Resolved, That at this time we are not prepared to adopt a series of advanced lessons to take the place of the uniform lessons in the adult grade of the Sunday-schools. The Lesson Committee is urged to consider the possibility of a manual of Bible-study may be secured by alternating at longer intervals—one of more years—the selections from the Old and New Testaments respect- ively. Resolved, That this convention reaffirm the instructions on the subject of temperature lessons adopted at Pittsburg and reaffirmed at St. Louis and Boston. A committee was provided for to consider what means should be taken in the various States and provinces to secure the reading of the Bible without comment in the public schools.

Notwithstanding this action, the friends of a graduated series of lessons continued to urge their views, and even to give formal expression to them. The Executive Committee of the West- ern section of the American Sunday-school Union met at Philadelphia in the later days of October to- instructed its Committee on Sabbath-Schools and Young People's Societies to select a course of Bible Lessons for school and day-schools for the use of the next meeting of the section for consideration; and this committee, at its meeting, Nov. 13, appointed a subcommittee to prepare the course.

The Council of Seventy of the Institute of Sacred Literature in November published a call for a national convention to consider methods for improving the efficacy of Bible teaching in the Sunday-school, the home, the college, and elsewhere. In its resolutions it declared "that the religious and moral instruction of the young is at present inadequate and imperfectly correlated with other instruction in history, literature, and the sciences; that the Sunday-school, as the pri- mary institution for the religious and moral edu- cation of the young, should be conformed to a higher ideal, and made efficient for its work by the gradation of pupils, and by the adaptation of its material and method of instruction to the several stages of the mental, physical, and moral growth of the individual; that the home, the day-school, and all other agencies should be de- veloped to assist in the right education of the young in religion throughout the world; but a conviction had grown up among many persons interested in Sunday-school work that this was not the wisest plan, and that a graded system of lessons adapted to the age and degree of advancement of different classes of pupils would be preferable, with an elementary series for the younger pupils, advanced courses for the older ones, and lessons like those at present in use for the intermediate classes. A begin- ner's course had already been tentatively used, satisfactorily, for one year. The report of the Lesson Committee favored the adoption of the graduated system, with the beginner's course, and a course for advanced classes, dealing with the prophetic, epistolary, and apocalyptic parts of the Bible, and was accompanied with the outline of an experimental course for two years. The plan of the committee was not adopted by the convention, except that it authorized the prepara-
and moral instruction could best be promoted by national organizations. A devoted exclusively to the purpose, the convention was called to assemble in Chicago, under the auspices of the Council of Seventy, in February or March, 1903, for the creation of such a national organization; the convention to consist of members and associate members of the Council of Seventy; invited teachers, ministers, and editors; and invited pastors of churches and superintendents of Sunday-schools.

According to the ninety-eighth annual report of the British Sunday-School Union, 7,443 schools, with 138,104 teachers and 1,500,242 pupils, were affiliated with the union at home; 1,130 schools, with 20,280 teachers and 210,010 pupils, in the Scottish National Sunday-School Union; 802 schools, with 9,090 teachers and 96,351 pupils, in 7 colonial unions; and 6,846 schools, with 10,573 teachers and 237,794 pupils, in the India Sunday-School Union; making, together with the numbers returned by the Buenos Ayres Sunday-School Association, a total of 15,842 schools, 195,648 teachers, and 2,082,608 pupils. The General Benevolent fund had received £1,003, including £1,000 contributed by the Prince of Wales, £1,964 had been received for continental and Indian work, and £1,964 for three children's homes and the Teachers' Home of Rest. The enterprises of the union had been greatly expanded, and it was seeking to extend Sunday work abroad as well as at home.

SWEDEN AND NORWAY, two kingdoms in northern Europe, united under the same sovereign, in Nov., 1814, but independent of each other in Constitution, government, and laws. Affairs common to both kingdoms are decided by a Council of State composed of Swedes and Norwegians. The throne in each monarchy passes in the order of primogeniture and in the male line to the descendants of Marshal Bernadotte, Prince of Ponte Corvo, who was elected by the Swedish Diet in 1810 to be the heir and successor of Carl XIII, the last sovereign of the house of Holstein-Gottorp. The reigning King is Oscar II, born Jan. 21, 1829, grandson of Carl XIV, the founder of the present dynasty, whom he succeeded as Carl XV on Sept. 18, 1872. The heir apparent is Prince Gustaf, Duke of Värmland, eldest son of the King, born June 16, 1858.

The Diet of Sweden, called the Riksdag, consists of a First Chamber, of 150 members, elected for nine years by provincial and municipal assemblies, and a Second Chamber, of 230 members, elected for one year by the towns by direct suffrage and 150 in rural districts either directly or indirectly as the majority decide, by natives of Sweden who own land assessed at a value of 1,000 kronor or have for five years farmed land assessed at 6,000 kronor or upward or pay income tax on 800 kronor. The qualified electors in 1899 were 6.7 per cent. of the population, and only 40.3 per cent. of them voted. The Swedish Council of State in the beginning of 1902 was composed of the following members: Minister of State, Baron Fredrik Wilhelm von Otter, appointed Sept. 12, 1900; Minister of Foreign Affairs, Carl Herman Theodor Alfred Lagerhjem, appointed Oct. 13, 1899; Minister of Justice, Per Samuel Ludvig Anerstedt, appointed Feb. 5, 1896; Minister of War, Jesper Ingwald Crusebjörn, appointed Oct. 27, 1896; Minister of Marine, Adolf Arnold Louis Palander, appointed May 31, 1901; Minister of the Interior, Julius Edvard von Kuffel, appointed Jan. 1896; Minister of Finance, Count Hans Hanson Wachtmeister, appointed July 16, 1897; Minister of Education and Ecclesiastical Affairs, Nils Ludvig Alcæson, appointed June 22, 1899; Minister of Agriculture, Albrecht Theodor Odberg, appointed March 31, 1900; Councilors of State, Dr. K. S. Husberg, appointed July 12, 1900, and Dr. Knut Hjalmar Hammerkjaerd, appointed Sept. 25, 1901.

The capital of Sweden is Stockholm, lying on the Baltic Sea, with a number of islands, connected by bridges and tunnels. It is a great commercial and manufacturing center, with a population of about 300,000.

The population of the town of Stockholms was in 1890 as follows: Stockholm, 300,624; Göteborg, 130,619; Malmö, 60,857; Norrköping, 41,005; Gdansk, 29,682.

The Army.—The reorganization of the army approved by the Diet in 1901 will be completed in 1913. The inddel, or cantoned troopers, will disappear. Every Swede, according to the new law, owes military service from the age of eighteen for eight years in the first and four years in the second ban of the Beväriling, and afterward for eight years in the Landstam. The period of service with the colors will be increased to forty-two days, and it is pending whether six-five days will be required. The marine troops, including the coast-artillery, serve three hundred days in all. The effective of the Swedish army in 1901 comprised 48 general and staff officers and 233 non-commissioned officers, 27,633 officers and men forming 55 battalions of infantry, 5,269 forming 56 squadrons of cavalry, 3,609 in the field-artillery, 633 in the fortress-artillery, 172 in the Gothenburg artillery, 991 forming 9 companies of engineers, and 772 forming 8 companies of train; total, 30,265, comprising 1,954 officers, 691 employees, 1,794 non-commissioned officers, 1,657 musicians, and 33,169 men, with 6,501 horses. The naval forces consisted of 2,613 officers, 80 employees, 450 non-commissioned officers, and 75 musicians, making a total of 1,288, on leave. The strength of the Beväriling was about 250,000, giving a war effective of 220,000 to all ranks, besides 200,000 men in the 8 classes of the Landstam. The infantry are armed with Mausers.

</table>
of 6.5 millimeters caliber, the reserve troops with Remingtons of 8 and 12 millimeters, the field- artillery batteries with 7-centimeter rapid-fire guns.

**The Navy.**—The navy of Sweden is intended merely for coast-defense. There are 10 first-class, 4 second-class, and 9 second-class turret-ships, 3 corvettes, 5 torpedo-cruisers, 13 gunboats and despatch vessels, and 15 first-class and 11 second-class torpedo-boats.

**Commerces and Production.**—The cereal crops in 1900 were 1,849,800 hectoliters of wheat from 75,400 hectares, 5,210,700 hectoliters of rye from 409,700 hectares, 5,210,700 hectoliters of barley from 229,700 hectares, 24,411,100 hectoliters of oats from 820,500 hectares, and 3,993,800 hectoliters of mixed grain from 120,000 hectares. Of beans and peas 858,300 hectoliters were raised on 48,290 hectares; of potatoes, 24,643,900 hectoliters on 157,500 hectares. The live stock on Jan. 1, 1900, consisted of 625,256 horses, 2,583,065 cattle, 1,263,786 sheep, and 8,103,809 hogs. The quanti- ty of iron ore mined in 1900 was 2,830,000 tons; the production of pig-iron was 518,787 tons; of bar iron, 329,965 tons; the exports of iron ore in 1899 were 1,629,011 tons; of pig-iron, 93,905 tons; of bar iron, 187,324 tons; the quantity of silver- lead ore mined in 1900 was 5,300 tons; of copper ore, 22,723 tons; of zinc ore, 61,044 tons; of man- ganese ore, 2,651 tons. The production of gold was 237,118 grams; of silver, 3,101,100 kilograms; of lead, 1,423 tons; of copper, 136 tons. The quantity of coal mined was 252,320 tons.

The total value of imports in 1899 was 504,- 787,451 kronor, and of exports 354,944,767 kronor. The imports of textile manufactures were 46,738, 248 kronor, and exports 1,579,218 kronor; imports of grain and flour were 49,327,777 kronor, and exports 4,850,580 kronor; imports of colonial goods were 38,634,760 kronor, and exports 135,290 kronor; imports of textile materials and yarn were 47,818,471 kronor, and exports 1,252,071 kronor; imports of coal and other minerals were 32,388,362 kronor, and mineral exports 21,421,509 kronor; imports of metal manufactures and ma- chinery were 74,605,197 kronor, and exports 22, 555,054 kronor; imports of live animals and ani- mal food products were 23,542,296 kronor, and exports 48,128,649 kronor; imports of hides, hair, and other animal products were 24,469,229 kronor, and exports 1,385,718 kronor; imports of raw and partly manufactured metal were 13,159,371 kronor, and exports 43,613,013 kronor; imports of timber and wood manufactures were 3,751,405 kronor, and exports 178,553,581 kronor; imports of paper and paper manufactures were 4,743,770 kronor, and exports 11,706,764 kronor; imports of other articles were 94,617,737 kronor, and ex- ports 30,158,575 kronor.

**Politics and Legislation.**—In the session of the Riksdag that opened on Jan. 15 the question of electoral reform created more serious division than that of universal military service in the pre- ceeding session. Some years ago the Govern- ment after much urging had presented a project that went too far for the Right without half satisfying the Left. The Government proposed in the bill that the male electors over the age of twenty-five years or over who are entitled to vote in their communes and have paid their taxes for two years and two votes to qualified electors were to be allowed to vote. The Left, however, had the matter decided by a two-thirds vote. Amend- ments to the Constitution can be enacted in like manner. The Council of State at the beginning of 1905, constituted on Feb. 17, 1868, was presided over by Johannes Vilhelm Christian Sten as Minister of State, who was head of the Department of the Interior and was composed further of the following Councillors of State and Heads of departments: Ecclesiastical Affairs and Pub- lic Instruction, Vilhelm Andreas Wexelsen; Justi- ce, Ole Anton Qvam; Agriculture, Wollert Ko- now; Public Works, Jörgen Gunderson Lövdén; Finance and Customs, Elias Sunde; Defense, Lieut.-Col. Hans Georg Jacob Stang. The delega- tion of the Government at Stockholm had the fol- lowing members: Minister of State, Otto Albert Bliehr; Councillors of State, Commodore Christian Sparre and Sören Tobias Arstad.

**Area and Population.**—Norway has an area of 124,445 square miles, and on Dec. 3, 1900, con- tained a population of 2,239,886, of whom 2,189,901 were males, and 1,087,479 males and 1,162,401 females. The area and population of the districts into which the kingdom is divided are given on the next page. The number of births was 20,399, of deaths, 6,053; of marriages, 20,450. The number of emigrants in 1900 was 10,951, of whom 10,965 emigrated to the United States, 112 to British America, and 104 to other countries.
Finances.—The revenue for the nine months ending March 31, 1900, was 78,627,000 kroner, of which 2,583,000 kroner came from direct taxes, 36,526,000 kroner from indirect taxes, and 24,135,000 kroner from other sources. The expenditures during the same period amounted to 75,866,000 kroner, of which 20,712,000 kroner were for defense, 5,344,000 kroner for debt, 18,650,000 kroner for public works, and 31,276,000 kroner for general purposes of government. For the year ending March 31, 1901, the total revenue was estimated at 99,547,070 kroner, including a cash balance of 3,783,200 kroner and 14,357,113 kroner raised by loan for railroads, telegraphs, and telephones, and expenditure was estimated at the same sum. For the year ending March 31, 1902, the budget balance at 97,300,000 kroner. Of the revenue the income tax yielded 5,500,000 kroner, the excise tax on spirits, 4,800,000 kroner, the malt tax 4,100,000 kroner, the succession tax 800,000 kroner, stamps 1,700,000 kroner, judicial fees 1,100,000 kroner, mines 449,000 kroner, the post-office 5,300,000 kroner, telegraphs 3,500,000 kroner, state property 4,105,154 kroner, railroads 12,808,000 kroner, miscellaneous sources 7,025,458 kroner, and loans for railroads, telegraphs, and telephones 11,444,793 kroner. Of the expenditures the civil list took 922,032 kroner, the Storting 7,573,800 kroner, the National Assembly 10,891,776 kroner, the Church and education 10,081,485 kroner, justice 7,392,929 kroner, the interior 13,709,929 kroner, the post-office, telegraphs, etc., 10,330,330 kroner, state railroads 19,924,174 kroner, roads, canals, and posts 4,664,176 kroner, finance and customs 4,282,572 kroner, mines 608,150 kroner, amortization of debt 2,591,559 kroner, interest 7,481,357 kroner, the army 13,800,600 kroner, the navy 4,120,000 kroner, foreign affairs 781,158 kroner, miscellaneous expenses 4,678,773 kroner.

The amount of the public debt on March 31, 1900, was 231,984,994 kroner. Rural communes raised 10,837,806 kroner of taxes in 1899 and townships 15,371,137 kroner. A loan of 35,000,000 kroner at 3½ per cent. redeemable in sixty years was obtained from Scandinavian banks in January, 1902.

The Army and Navy. The land forces of the kingdom are divided into troops of the line, the Landvaeren and the Landsturm. Without the consent of the Storting the troops of the line actually under arms are never in excess of war, exceed 18,000 men. They number about 30,000 men, with 900 officers, and the Landvaeren and Landsturm number about 40,000 with 800 officers. Norway has a small navy for coast-defense consisting of 4 English-built turreted-ships, 4 monitors, 31 gunboats, and 31 torpedo-boats.

Commerces and Productions. There were 185,905 hectares under cereal crops in 1900, yielding 102,010 hecctoliters of wheat, 1,284,230 hecctoliters of barley, 3,401,250 hecctoliters of oats, 301,940 hecctoliters of rye, and 442,940 hecctoliters of mixed grain. The production of peas was 72,800 hecctoliters. The potato-crop from 30,122 hectares was 8,640,390 hecctoliters. Grain and flour for 51,182,000 kroner were imported in 1899, the value of rye being 20,230,800 kroner. The value of meat imports was 8,223,000 kroner. The value of mineral products in 1899 was 4,642,000 kroner; of furnace products, 1,757,000 kroner. The catch of cod in 1899 was valued at 11,122,000 kroner; herring, 6,636,000 kroner; mackerel, 374,000 kroner; salmon and sea trout, 946,000 kroner; other fish, 4,663,000 kroner; lobsters, 544,000 kroner; oysters, 5,845 kroner; total value of fisheries, 24,291,000 kroner, in addition to which the North Sea mackerel fisheries, the bank fisheries, and the whale, walrus, and seal fisheries brought in 3,400,000 kroner.
German is spoken by the majority, in 5 the language is French, in Ticino it is Italian, and in Liechtenstein, or in Kaun, Romansch. The number of foreigners residing in Switzerland in 1900 was 392,086. The number of marriages in 1900 was 25,538; of births, 98,419; of deaths, 60,572; excess of births, 38,847. The number of emigrants in 1900 was 3,816, of whom 931 came from Bern, 556 from Ticino, 468 from Zürich, 240 from Basel Stadt, 188 from St. Gall, and 1,433 from other cantons. The destination of 3,841 was the United States, while 341 went to South and Central America, 21 to Asia, 17 to Africa, and 16 to Australia.

**Finances.**—The revenue of the Federal Government, Industry, and Agriculture under the head of industry, 2,850,170 francs for agriculture, 659,900 francs for commerce, 25,900 francs for the Army, 365,000 francs for railways, 7,047,900 francs for the post-office, 11,744,199 francs for telegraphs, and 36,024 francs for miscellaneous expenses. The debt of the Confederation on Jan. 1, 1901, amounted to 95,424,267 francs, most of it paid 4% cent. interest. The Confederation owned real property worth 54,396,865 francs, 31,463,671 francs of securities, works producing profit worth 32,890,011 francs, 20,180,281 francs worth of shares, 352,190 francs of collectible debts, 38,233,021 francs in special funds, and 8,744,652 francs in the alcohol régie, railroads, and cash on hand; total, 186,732,810 francs.

The Army—Switzerland has a militia system in which schoolboys at the age of eight begin their military exercises, and shooting and other military accomplishments are prominent among the schoolboy population. The cantons maintain the infantry and the main part of the cavalry and artillery. The Federal Government provides for their military training and maintains the cavalry guides, the artillery park, the train, the engineer corps, and the technical, administrative, and sanitary troops. Recruits of education and pecuniary means are selected for the engineers, artillery, and cavalry. Men who do not serve in the army pay a military tax of 6 francs and a supplementary annual tax proportionate to their means up to a maximum tax of 3,000 francs a year. The officials of the Confederation and half to the cantons. From the age of twenty to the age of thirty-two the men in the army belong to the Auszug or Élite, then till the age of forty-four to the mobil, and at an age of fifty to the Landsturm. The Landwehr is divided into 2 bands, the first comprising men between the ages of thirty-two and forty, the second those from forty-four to young men of sixty years of age. The annual contingent of recruits for 1900 was 16,234. The number of men enrolled in the Auszug and Landwehr was 252,598, and the number paying the military tax was 292,737. The effective of the Auszug on Jan. 1, 1901, was 114,843 infantry, 4,641 cavalry, 20,113 artillery, 5,507 engineers, 4,940 sanitary troops, 1,444 administrative troops, and 278 cyclists, making a total of 151,706 officers and men; effective of the first band of Landwehr, 40,840 infantry, 3,433 cavalry, 11,174 artillery, 4,461 engineers, 2,912 sanitary troops, 925 administrative troops, and 69 cyclists, a total of 63,734; second band of Landwehr, 21,069 infantry, 2,403 artillery, 718 sanitary troops, and 29 administrative troops, a total of 24,208; Landsturm, 44,506 infantry, 2,981 artillery, 12,077 pioneers, 113,762 auxiliaries, 7,441 sanitary troops, and 1,192 cyclists, a total of 278,556, of whom those classed as pioneers and auxiliaries are not provided with arms, and 16,000 receive a personal tax for two or three months in the first year, and in succeeding years the cavalry exercise annually for ten days and the other troops for three weeks every second year.

**Commerce and Production.**—Rye, oats, and potatoes are the chief farm crops, but vineyards and orchards occupy more land, and the mountain pastures are a greater source of wealth than all these. The exports of cheese in 1900 were 273,361 quintals; of condensed milk, 282,986 quintals. There were 124,896 horses, 4,685 mules and asses, 1,340,375 cattle, 219,438 sheep, 354,634 goats, and 555,261 pigs in 1901. The wine produced on 30,448 hectares of vineyards in 1900 was 2,103,255 hectoliters. The production of salt in 1900 was 492,841 quintals; of cement, 571,920 metric tons. The industries of the country are varied and highly developed, including watch-making, jewelry, textile manufacture of many kinds, leather and rubber, woods, mineral coal, iron, steel, preparations, metallurgy, paper-making. The quantity of beer brewed in 1900 was 2,186,372 hectoliters. The alcohol régie during the year ending Aug. 31, 1900, sold 35,006 quintals of spirits for drinking and 47,208 quintals of methylated spirits. The hotels of Switzerland are 1,896 in number, having a capital of 550,480,000 francs.

The total value of imports for consumption in the country was 1,296,506,617 francs in 1900, and the exports of domestic produce and manufacture were valued at 884,898,771 francs. The total value of effective imports, excluding goods in transit, was 1,217,373,005 francs, and of effective exports 894,991,205 francs. In the special trade of 1900 imports of merchandise amounted to 1,058,944,569 francs, and exports to 818,892,454 francs. Imports of coin were 95,899,917 francs, and exports 48,819,071 francs; imports of uncoined precious metals were 92,155,131 francs, and exports 17,387,246 francs. In the merchandise movement the imports of cotton and cotton goods were 80,399,333 francs in value, and exports 167,614,696 francs in value; imports of silk and silk goods 145,154,730 francs, and exports 224,609,565 francs; imports of wool and woolen goods 55,856,338 francs, and exports 18,768,441 francs; imports of flax and linen goods 12,612,505 francs, and exports 1,616,763 francs; imports of tobacco 104,523,900 francs, and exports 12,453,241 francs; imports of mineral substances 93,027,861 francs, and exports 4,794,241 francs.
Turkey.

Railroads, Posts, and Telegraphs.—The railroads in 1900 had a total length of 2,802 miles, besides which there were 290 miles of rack and cable railroads and tramways. The capital cost of the railroads proper was 1,249,779,489 francs, and of the other lines 37,101,906 francs; total, 1,286,881,395 francs. 1,722,423 passengers were carried, 1,529,423 francs, and expenses 79,303,177 francs. The number of passengers carried in 1900 was 54,512,071; freight traffic, 14,220,218 tons; receipts, 126,430,290 francs.

The post-office in 1900 carried in the internal service 93,648,364 letters, 39,602,827 postal cards, 37,175,298 book packets, etc., 987,901 samples, 117,231,417 new papers, and 3,361,455 parcels, and of foreign mail 21,139,703 letters, 15,657,275 postal cards, 8,561,425 book packet books, 935,961 samples, and 1,518,633 parcels. The internal post-office orders amounted to 692,829,863 francs; international orders, 59,778,482 francs.

The State telegraph-lines in 1900 had a length of 4,256 miles, with 13,478 miles of wire, and there were 1,412 miles of railroad and private telegraph-lines, with 8,954 miles of wire. The number of internal despatches was 1,577,874; international despatches, 1,694,371; despatches in transit, 617,917. The telegraph receipts were 3,051,882 francs, and expenses 3,043,992 francs; receipts from telephones were 6,220,857 francs, and expenses 7,115,206 francs. The length of telephone-lines was 8,907 miles, with 83,929 miles of wire. The number of conversations in 1900 was 26,026,772.

Politics and Legislation.—The acquisition of the railroads by the Confederation was completed in 1902 and the railroad bonds are being converted into 31-per-cent. federal bonds. The Federal Council on Aug. 19 issued a decree requiring religious congregations and orders not authorized by law to close in accordance with an article in the Constitution prohibiting the founding of new convents or orders or the reestablishment of such as have been suppressed. In the general election to the National Council on Oct. 26 the Radical-Democratic majority was considerably strengthened. The number of members, owing to the growth of the population, was increased from 147 to 167. For the future it has been a popular referendum that in apportioning 1 seat to 20,000 inhabitants only the Swis, not the total, population will be reckoned.

TENNESSEE. (See under United States.)

TURKEY, an empire in eastern Europe and western Asia. The Government is an absolute monarchy, the laws which are founded on the Koran. The Sultan exercises supreme civil authority through the Grand Vizier and supreme religious authority through the Sheik-ul-Islam, whose appointment is made with the concurrence of the Ulama, a body composed of the highest acknowledged exponents of Mohammadan laws and doctrines, summoned by the muftis, who are the exponents of the Koran. The reigning Sultan is Abdul Hamid II, thirty-fourth ruler of the house of Osman and twenty-sixth since the caput of Constantinople in 1453, born Sept. 22, 1842, son of Sultan Abdul Medjid and brother of the deposed Sultan, and was expected to crown on Aug. 31, 1876. The throne descends to the senior prince born in the harem. The heir apparent is the Sultan's brother, Mohammed Rehad, born Nov. 3, 1844. The Privy Council, or Cabinet, was composed in the beginning of 1902 as follows: Grand Vizier, Kutchuk Said Pasha, appointed Nov. 17, 1901; Sheik-ul-Islam, Jemal-ed-din Effendi, appointed in September, 1891; Minister of the Interior, Memduh Pasha; Minister of Justice and Worship, Abdullah Han Pasha; Minister of War, Riza Pasha; Minister of Marine, Hassan Pasha; Minister of Foreign Affairs, Ahmed Terfik Pasha; Minister of Finance, Rewad Pasha; President of the Council of State, Mohammed Said Pasha; Grand Master of Artillery, Mustafa Zekki Pasha; Minister of Evkafs, Galib Pasha; Minister of Education, Zuhdi Pasha; Minister of Public Works and Commerce, Zebni Pasha.

Area and Population.—Turkey in Europe has an extent of 65,752 square miles, with 6,080,300 inhabitants; Asiatic Turkey, 565,394 square miles, with 17,545,300 inhabitants. The total area is 1,115,046 square miles.

ent is the Sultan's brother, Mohammed Rehad, born Nov. 3, 1844. The Privy Council, or Cabinet, was composed in the beginning of 1902 as follows: Grand Vizier, Kutchuk Said Pasha, appointed Nov. 17, 1901; Sheik-ul-Islam, Jemal-ed-din Effendi, appointed in September, 1891; Minister of the Interior, Memduh Pasha; Minister of Justice and Worship, Abdullah Han Pasha; Minister of War, Riza Pasha; Minister of Marine, Hassan Pasha; Minister of Foreign Affairs, Ahmed Terfik Pasha; Minister of Finance, Rewad Pasha; President of the Council of State, Mohammed Said Pasha; Grand Master of Artillery, Mustafa Zekki Pasha; Minister of Evkafs, Galib Pasha; Minister of Education, Zuhdi Pasha; Minister of Public Works and Commerce, Zebni Pasha.

Area and Population.—Turkey in Europe has an extent of 65,752 square miles, with 6,080,300 inhabitants; Asiatic Turkey, 565,394 square miles, with 17,545,300 inhabitants. The total area is 1,115,046 square miles.
and the total estimated population 24,931,600, including only the territories at present under Ottoman administration. The countries under Turkish sovereignty, but no longer subject to the civil or military rule of the Ottoman Government, are Egypt, Bulgaria, Bosnia and Herzegovina, Samos, Crete, and the Ionian, having a combined area of 3,460,686 square miles and 17,746,779 inhabitants. Constantinople, the capital of the empire, has a population of about 1,125,000; Smyrna, 201,010; Bagdad, 145,000; Damascus, 140,687; Aleppo, 127,149; Beirut, 118,811; Salonica, 105,000.

**Finances.**—The available revenue of the Turkish Government is estimated at £ T. 13,961,700, and the normal expenditure at £ T. 15,354,000, leaving, unless it is averted by administrative and fiscal reforms, a deficit of £ T. 1,392,300. This estimate does not include the expenses of the external debt nor the revenues surrendered to the Council of the Debt Administration, viz., the Bulgarian, Eastern Roumelian, and Cyprus tributes, the tax on Persian tobacco, and the excise duties. A guaranteed loan of £ 25,000,000 sterling raised in 1883 on loans secured on the Egyptian tribute, the Tumbeiki loan of £ 900,000, and a loan of £ 5,909,080 raised in 1886 are not included in the debts administered by the international Council of Administration from taxes on salt, spirits, fisher-

ies, and silk, stamps, the tobacco tithes and répie, and other ceded revenues in 1801 were £ T. 2,189,787. The Eastern Tributes fell into arrears and part of the Cyprus tribute was kept back till the following year; moreover, some of the ceded revenues declined, so that the receipts from all sources were less than £ T. 2,189,787, at the end of which a reserve fund of £ T. 574,000 had been accumulated. The interest that the Council of Administration has been able to pay hitherto is 1 per cent. With increased receipts it may be raised to a maximum rate of 4 per cent., 20 per cent. of the amount received being set aside for amortization. The total amount of the Turkish debt outstanding on July 1, 1911, was £ T. 133,939,003, not including the war indemnity to Russia, of which £ T. 24,513,000 were still due, and £ T. 55,000 due to individual Russians, making the total £ T. 273,494.

**The Army.**—The Nizam, the Redif, and the Mustazhghi of the Ottoman army correspond to the active army, the Landwehr, and the Landsturm in Germany. The remunerations are very low. Recruits have to serve, the infantry three years, the cavalry and artillery four years in the Nizam with the colors, and three or two years respectively in its reserve, or they are assigned at once to the reserve and are drilled from six to nine months and one month annually in succeeding years. Any conscript after three months of active service in the Nizam can obtain an indefinite furlough by paying £ T. 50. After the Nizam period is past the soldiers belong four years to the first and four years to the second ban of the Redif, and then six years to the Mustazhghi. Christians and Jews pay an annual military tax of 30 piasters for every male. Nomadic Arabs escape conscription, and many of the Kurds as well, but those who are being enrolled, in Armenia, Kurdistan, and Mesopotamia, in a mounted militia, the hamadrich cavalry, under their tribal chiefs. The nizam and Redif infantry have been armed with Mausers, the European regiments with the new rifle of 7.65 millimeters, the Asiatic troops with one of 9.5 millimeters. There are 7 ordus, or army corps, drawn from as many military regions, with headquarters at Erzurum, Monastir, Erzinjan, Damascus, Bagdad, and Sanaa in their numerical order. The Seventh Corps is not recruited in Yemen, where few loyal troops can be raised, but mainly among the Turks of Asia Minor, who furnish some troops for the garrison of Tripoli and European Turks the rest. The effective of the Turkish army in 1901 was as follows: 663,000 infantry, in 948 battalions; 55,300 cavalry, in 202 squadrons; 56,720 artillery, with 1,356 guns; and 7,400 engineers, in 39 companies; total, 700,620 men. The war effort is computed at 1,500,000 men.

**The Navy.**—The principal ships of the Turkish navy are the Hamidijeh, of 6,700 tons; the Mesudijeh, of 9,000 tons; and the barbette cruiser Abdulkader. A contract was signed in 1901 for the construction of a new cruiser in the United States.

**Commerce and Production.**—The cultivated area in the Turkish Empire is about 44,000,000 acres. Forests cover 21,000,000 acres, but they are being rapidly diminished. About 1,000,000 hectoliters of wine are made annually, of which 150,000 hectoliters are exported. Silk and silk-worm eggs are exported. The production of oil of roses in 1901 was about 2,600 kilograms. The export of raw silk in the fiscal year 1901 was 4,453,244 kilograms; of silk waste, 178,905 kilogram-

s; of twisted silk, 151,482 kilograms; of cocoons, 133,975 kilograms; salt, 35,223 metric tons.

**Navigation.**—The number of vessels entered and cleared at Constantinople from and for foreign ports in 1900 was 10,787, of 10,277,272 tons, of which 3,169, of 410,289 tons, were sailing vessels and 7,618, of 9,866,983 tons, were steamers. Of the vessels 6,040, of 6,723,312 tons, were Turkish; 2,661, of 4,250,848 tons, were British; and 2,323, of 1,589,861 tons, were Greek. The total number of vessels entered and cleared during the year was 14,394, of 10,475,728 tons. The number entered and cleared at all Turkish ports in 1898 was 173,739, of 34,653,457 tons. The merchant marine in 1900 comprised 2,005 sailing vessels, of 141,050 tons, and 177 steamers, of 55,983 tons.

**Railroads, Posts, and Telegraphs.**—The length of railroads in 1900 was 2,980 miles, of which 1,267 were in European Turkey and 1,713 miles in Asia Minor. A railroad from Konstanta to Bagdad and Koweit is planned by a German syndicate, one from Damascus to Aleppo by French capitalists, one is being built with British capital from Damascus to Medina, and another by the Turkish Government from Damascus to Medina and Mecca.

The Turkish post-office during 1898 forwarded 11,580,000 letters and postal cards and 2,583,000 samples and printed endorsements in the domestic and 6,046,000 letters and postal cards and 3,560,000 samples and printed endorsements in the international service.

The telegraphs have a length of about 23,440 miles, with 38,400 miles of wire. The receipts amount to £ 269,700 and expenses to £ 284,280 a year.

**The Island of Thasos.**—Mehemet Ali, the first Viceroy of Egypt, received from the Sultan Selim I, as a reward for services rendered in Arabia, the island of Thasos, in the Egean. It is a place of great strategical value, because it commands the entrance to the Dardanelles. The island has been administered by the Egyptian Wafi, and its revenues are devoted to the maintenance of a school of Mohammedan theology. The Turkish Government has contended that only the usufruct was granted, while Egyptian authori-

ities hold that the whole is Turkish. The Egyptian Government has collected only
Turkey.

£ 7,000 taxes from the island and has supplemented this with an equal amount in order to keep up the rigorous discipline required. In 1902 the Egyptian commissary levied a goat tax, not merely in order to add to the revenue, but to preserve the trees which the multitudes of goats were destroying. The people refused to pay the tax, and when it was enforced they resisted. There was a fight in which many persons were wounded. The Sublime Porte therefore ordered the incorporation of the island as a new district in the vilayet of Salonica. A Turkish administrator appeared with gendarmes and law officials and assumed jurisdiction and control. The Khedive sent the director of the Wakt to enforce his rights of property and administration, but he was not successful in doing so. The English authorities thereupon offered the Khedive their support, but their intervention was declined.

Political Disturbances. There was more unrest among the Christian populations of the Turkish Empire in 1902 than there had been for some years before, and a corresponding ferment was started among neighboring Mohammedan peoples. The financial embarrassment of the Central Government rendered any attempt at reorganization impossible, while that embarrassment was increased by the mobilization of troops for the prevention of rebellion. The restraining influence of the Austro-Russian accord alone kept the Macedonians from a general open revolt and caused a split among the Macedonians themselves, the majority of whom lost faith in Bulgarian aid, since Bulgaria was held in restraint by Russia, and planned a spontaneous movement for the creation of an autonomous Christian state within the Turkish Empire. The Albanians showed some tendency to break loose from Turkey and set up a separate Mohammedan state. Italians and Austrians were secretly busy in Albania endeavoring to foster their respective national interests and influence. The ill treatment of Servians by Albanians prompted Russia to establish a consulate in the country to watch over the safety of the Slav inhabitants. Neither Greece nor Servia would engage in a national question in the Mediterranean, and the Bulgarian propaganda relaxed, although the revolutionary desires of the Macedonians were keener than ever. The Armenians put forward their national aspirations. They held a congress in Brussels, and afterward revolutionary outbreaks occurred at Mesh and Sasun, which were rigorously repressed. The United States minister succeeded in getting from the Porte indemnities for the American schools and missions that were destroyed by the Turks in the Armenian outbreak of 1895. The Gregorian patriarch obtained an indemnity recalling the exceptional laws under which the Armenians have suffered ever since by convincing the Sultan that the masses of the Armenians are loyal to his rule. Until the Hinterh and other secret societies bred a revolutionary spirit among the Armenians they were the most favored race next to the Turks in the whole empire and were known distinctively as the loyal community. The Arabs betrayed their characteristic aversion to Turkish rule that is always manifested when the resources of Stamboul are crippled. A difficulty arose with Italy regarding piracy in the Gulf. The Italian Government notified the Porte that if this was not stopped it would take measures itself to do so. An ultimatum was sent to the Arab authorities, and when there was no reply the Italian squadron sank the pirate dhows of the island of Midi and the Turkish troops captured the chiefs, two old Turkish cruisers having been repaired and sent to Yemen with troops to accomplish this purpose.

The French Government in a similar spirit desired to protect its commerce. An English gunboat bombarded Balhaf, the chief of that town having plundered a British ship that was wrecked on the coast. Koweit, at the head of the Persian Gulf, has been taken under the protection of Great Britain, and the Vali of Busra was thwarted in his efforts to reestablish Turkish authority over this stronghold, important for naval purposes and also a more commanding position in the Arabian peninsula than the rugged promontory of Aden, where Great Britain has extended its territory up to the edge of effective Turkish occupation, whereas in central Arabia effective Turkish possession is impossible without a military effort that the Porte has not the means of making at present. The Sheik of Koweit has been aided before in asserting his independence, and with British aid he has successfully defied the Turks, although Busra was made a separate vilayet in 1889 for the purpose of organizing Turkish rule in this part of Arabia. The Wahabis in the interior are supplied from Koweit with the means of maintaining their rebellion against the Turks, while their embassies at Koweit forbid the landing of a Turkish force to subdue the rebellious Sheik Mubarak. The position of the latter, however, can only be made secure by a large and permanent force ready to protect him against rival claimants. One of these, Ibn el Rashid, Emir of Nejd, attempted in September to attack him by land and water, and a serious movement for the creation of an autonomous Islamic state within the Arabian peninsula was advocated. The British Government called upon the Porte to punish the Emir of Nejd, but the Vali of Busra did nothing. The dhows in which a part of the attacking force came were captured by British sailors, one of whom was killed. Germany has permission to extend the Bagdad river to Koweit, which lies at the mouth of the Tigris, and is unwilling that England by means of intrigues with Arab chiefs shall establish territorial claims in this part of Arabia, and British claims are not yet recognized by Russia or any of the other powers. The Turks took more active measures for the suppression of piracy. The British alone have encouraged the rebellious Arabs in their revolt against Turkey and questioned the sovereign rights of the Sultan over the peninsula, compelling him to keep an army corps in Yemen and one on the other side of Arabia. Turkish sovereignty is not questioned in the holy places. The extension of the British protectorate over the part of Yemen lying behind Yemen was obtained by aiding a few rebellious tribes in their resistance to Turkish authority. The Sultan of Makalla and Chahar is desirous of setting up an independent kingdom, and if the British give him effective support they may establish a protectorate over a large part of Yemen, where their interests do not come into conflict with those of other powers as directly as in the Persian Gulf.

Two commissions have been sent to delineate the British sphere in theHintorian of Aden, and neither reached a definite conclusion on the matter. The Turkish Government will not admit the British extensions, which have been accompanied by the demolition of Turkish fortifications and the British authorities are content to continue to keep the question open. In the Gulf of Aden, pending the negotiation of a more definite arrangement, the Porte agreed with Great Britain to maintain the status quo and not to attempt to improve that position for the subjugation of the Sheik of Koweit.
UNITARIANS, The reports of the American Unitarian Association were given by 440 ministers, 452 societies, and 71,000 members. The annual meeting of the American Unitarian Association was held in Boston, Mass., May 27. The president, Rev. E. Stiles Gannett, opened the meeting with a prayer, and the report of the secretary was read. The report of the secretary showed that the number of new members had increased from 1,800 last year to 2,200 this year. The financial report showed a deficit of $2,500, but no intention existed at present to undertake the establishment of Unitarian churches in Cuba. The work of special committees on investigating the condition of our American Indian missions was not completed, but no intention existed at present to undertake the establishment of Unitarian churches in Cuba. The report of the National Unitarian Temperance Association showed a small but steady advance in the number of members and friends of the movement. The statistical reports of this Church for 1902 give it 501 ministers, 820 churches, and 63,390 communicants. The bishops, in their quadrennial address to the General Conference in October, represented that the net gain in members for four years had been 4,200. During the same period 27,279 conversions had been reported, and 29,462 admissions by confession of faith. The gain in itinerant preachers in four years had been 75, while the number of local preachers, 214, remained exactly the same. The contributions during the quadrennium had been $201,688 for missionary purposes, $77,295 for other conference collections, $117,412 for Sunday-school work, $710,371 for preachers' salaries, and $508,641 for building and repairing churches and parsonages, in the sum of $1,675,837. One hundred and thirty-six churches and 84 parsonages had been added, and the total valuation of church property—$2,751,507—had increased $364,908, or 41 per cent.; but there were still 159 organized congregations without a church building. Of the educational institutions, Central
Pennsylvania and Albright Colleges had been united into one, called Albright College, and Dallas (in the state of Pennsylvania) was the new College. The per capita missionary contributions had increased from 70 cents in 1898 to $1.13, or 61 per cent. The report of the statistical secretary gave the following results for the years during the past four years: In membership, 7.2; in preachers, itinerant and local, 11.7; in organized congregations (three years), 5.4; in Sunday-schools (present number 887), 13.1; in average attendance on the same (53710), 6.2; in Keystone League Christian Endeavor Societies, 2.4, with a small decrease in active membership; in Women's Missionary Societies (221), 37.5; in active membership of the same, 37.1; in Young People's Missionary Societies (32), 120 and 120 per cent. in their membership; in mission bands (129), 30.6, and 61 per cent. in their membership; in aggregate circulation of periodicals, 18.4; in missionary collections—conference treasury, 34.6; general treasury, 109; in average missionary contribution per member, 60; in average contribution per member as a percentage of the salary ($317), 19.2; in average contribution per member for preachers' salaries ($3.17), 18.2.

The Board of Church Extension reported to the General Conference that its receipts for four years had been $1,649, and its expenditures $2,179. Six churches had been aided during the time. The receipts for the past year had been $449.

The total volume of business of the publishing house at Harrisburg, Pa., for the past year had been 605,754, showing an increase of 3,258 over the previous year. The net profit for the year had been $2,402.

The charitable society had received $2,402 and expended $31 in four years, and returned its resources on Oct. 1, 1905, as $3,530. A by-law of the society provides that none of the income arising from its revenues or investments shall be distributed till the fund amounts to $10,000.

The receipts of the Missionary Society for the year ending Oct. 1 had been $21,286, and the expenditures $20,872. The Conference Missionary Societies had received $40,109, and expended $85,741. The Woman's Missionary Society had received $18,706, and expended $18,250. The amount of the foreign mission fund—$3,905 having been added during the year—was $9,742; and the receipt of $46 for the First Church in China was one of the annuities made by the society to the General Conference gave the total receipts for four years as $204,142, and the expenditures as $253,721. The appropriations for 1902-03 amounted to $66,600.

The General Conference met at Williamsport, Pa., Oct. 9. The report on education gave accounts of the three higher institutions—Albright College, Myerstown, Pa.; Western Union College, Le Mars, Iowa; and Dallas College, Dallas, Ore.; and embodied a declaration, which was adopted by the conference, that the demand upon the Church is imperative to furnish its youth the opportunity for thorough education in its own institutions, and under the guidance and influence of men and women of its faith. Regulations were adopted for the government of the theological institutions and theological departments in schools, prescribing that all the members of the Boards of Trustees controlling such departments shall be members of the Church and shall, at the request of the Board of Trustees, sign a declaration promising "to uphold the doctrines, discipline, and polity of the United Evangelical Church; that each teacher shall be likewise a member of the Church, and shall, before he enters upon his office as a teacher and each successive year, sign the declaration against the teaching of doctrines, discipline, and polity," so long as he remains in connection with the institution.

Provision was further made for dealing with teachers offending against these rules, and each theological school was made amenable to the annual conferences under whose control it stands, to which it was required to report. A post-graduate course of study for preachers was adopted. A new article on church extension was adopted for insertion in the Discipline, contemplating the reorganization of the society on such a basis as shall enlist the entire Church in its work. The election of a corresponding secretary of the Missionary Society was recommended, he to be without salary except such compensation as may be given him for actual service in canvassing the Church. The interest of the conference was expressed in the newly established mission at Changsha, China; the purchase of property there was advised; the establishment of a training-school in connection with the mission was directed. All forms of Sabbath observance were disapproved, the general observance of the Lord's Day. Resolutions on moral reform and temperance took cognizance of "the various current aspects of temperance action and discussion and the standard of personal purity, emphasized the importance of steadfast adherence to the rule of the Church on divorce (for adultery only), and expressed opposition to all monopolies injurious to healthy competition. The interests and organization of Sunday-schools and Christian Endeavor Societies were recognized in resolutions embodying suggestions as to their conduct. A complete change of bishops was effected, the Rev. H. R. Hartzler, D. D., editor of The Evangelical and the Rev. William F. Heil being chosen to that office, while Bishop W. M. Stanford was elected editor of The Evangelical and The Lutheran. The year 1906 was one of greater activity than ever before in the United States. The new American republic in North America. The legislative power is vested in the Congress, consisting of the Senate and the House of Representatives. There are 90 Senators, 2 from each State, elected by the State Legislatures for six years, one-third being renewed every second year. The House of Representatives has 357 members, elected in the congressional districts, into which the States are divided on the basis of the population shown in the last preceding decennial census, for two years by the ballots of all persons qualified to vote in State elections, in most States by universal adult male suffrage. Each House of Congress is the judge of the elections, returns, and qualifications of its own members. No person holding office can while continuing in office be a member of either House. Senators must be thirty years of age, citizens of the United States for nine years, and residents of the States in which they are chosen. Representatives must be twenty-five years of age, citizens for seven years, and residents of the States from which they are elected. The executive power is vested in the President of the United States, who is commander-in-chief of the military and naval forces, can lay before Congress projects of legislation, is empowered to
make treaties, subject to the ratifying vote of two-thirds of the Senate, has power to veto acts of Congress by laying and carrying over the veto by a two-thirds majority in each House, commissions the officers of the army and navy, and appoints the civil officials of the Government, subject to confirmation by the Senate. The Vice-President is ex officio President of the Senate, and in case of the death, resignation, or removal of the President he succeeds to the powers of the latter during the remainder of the term. The President and Vice-President are elected for four years by colleges of electors chosen in each State in such manner as the legislature prescribes, which is in every State by popular suffrage, their number in each State being equal to the number of Senators and Representatives of the State in Congress. It has become the custom of political parties to nominate in national convention their candidates for President and Vice-President, and the electors, chosen in each State on a collective ticket, are accustomed to vote solidly for the candidates designated by their party. This is the precedent. The election of the President and Vice-President is effected in reality, though not in form, by the direct vote of the nation. The presidential term is four years. Powers not delegated to the Federal Government are reserved to the States. Congress has power to legislate in matters of and pertaining to Federal taxation, treaties, and other dealings with foreign powers, the navy, the army, to a certain extent the militia, foreign and interstate commerce, the postal service, coinage, weights and measures, and crimes against the United States. The President is elected at the head of the executive and a Legislature composed of two Houses, both elective. The revenues of the State governments are derived from direct taxes on real property or on both real and personal property, while Congress is forbidden in the Constitution to levy direct taxes save in proportion to population. Personal and property rights, the civil and criminal law, education, the public health, charities, the control of corporations, are matters of State legislation.

The President of the United States for the term ending March 4, 1901, Theodore Roosevelt, of New York, born in 1858, who was elected Vice-President in 1900 and succeeded to the presidency on the death of President William McKinley, Sept. 14, 1901; The President at the beginning of 1902 was composed as follows: Secretary of State, John Hay, of Indiana, appointed in 1889; Secretary of the Treasury, Lyman Judson Gage, of Illinois, first appointed on March 5, 1891; Secretary of War, Elihu Root, of New York, appointed on July 21, 1890; Secretary of the Navy, John Davis Long, of Massachusetts, first appointed on March 5, 1897; Secretary of the Interior, Ethan Allen Hitchcock, of Missouri, appointed in January, 1899; Postmaster-General, Charles Emory Smith, of Pennsylvania, appointed on Dec. 18, 1901; Attorney-General, Philander Chase Knox, of Pennsylvania, appointed on April 5, 1901; Secretary of Agriculture, James Wilson, of Iowa, first appointed on March 5, 1897.

On Jan. 9, 1902, Gov. Shaw of Iowa was appointed Secretary of the Treasury on the resignation of Secretary Gage. Leslie Mortimer Shaw was born in Morrissett, Va., Nov. 2, 1848, went to Iowa, where he was educated at the Newton University and Cornell College in that State at the age of twenty-three, earned his living while studying, read law, practised in Denison, became president of the bank of Denison, was drawn into politics by the currency issue in 1866, in the following year was elected Governor, was nominated by acclamation and reelected, and was serving his second term when called into the Cabinet.

On Jan. 9, 1902, Edward M., son of Robert W., born in Ashfield, Mass., Nov. 23, 1843, was educated at Shelburne Falls Academy, went to Milwaukee in 1863, was cashier in a dry-goods store at first, became active in the commercial development of electricity and in syndicating electric railroads and telephones, and was also an energetic political leader and manager in his State, served as postmaster of Milwaukee for ten years, and was a delegate to the National Republican Conventions in 1888 and 1892.

On April 29, 1902, William H. Moody, of Massachusetts, succeeded Mr. Long as Secretary of the Navy. He was born in Newbury, Mass., Dec. 23, 1835, graduated at Phillips Academy, Andover, in 1852, and at Harvard in 1876, studied and practised law, was district attorney for the Eastern District of Massachusetts from 1890 to 1895, was first elected member of Congress for the Sixth District of Massachusetts in 1880 and was a member of the House when he received his appointment.

Area and Population.—The land area of the States and Territories is 9,593,000 square miles, exclusive of the Indian Territory, which has 31,000 square miles, and Alaska, which has 531,000 square miles, and the Territory of Hawaii, which has an area of 6,864 square miles, making the total area 9,527,640 square miles, which does not include Territories belonging to but not a part of the United States—the insular possessions, Porto Rico, with an area of 3,455 square miles; the Philippines and Sulu Islands, having an area of 114,000 square miles; Guam, having an area of 200 square miles; and Tutuila and Manua, in the Samoan group, which, with smaller islands, have an area of 79 square miles; bringing the total area under the American flag up to 9,625,619 square miles. The States and Territories, according to the census of 1900, have a population of 74,005,515, exclusive of 392,000 in the Indian Territory, 63,592 in Alaska, 154,001 in Hawaii, and 91,219 soldiers, etc., abroad, increasing the total to 76,393,587, which is nearly the population of the United States and possessions not incorporated in the United States increases further to 85,271,700. The population of the North Atlantic division, comprising Maine, New Hampshire, Vincennes, and the District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida, forming the South Atlantic division of States, area 298,620 square miles, had 10,443,480, compared with 8,857,922; Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas, grouped as the North Central division area 753,550 square miles, had 26,333,044 inhabitants in 1900, against 22,410,417 in 1890; the South Central division, comprising Kentucky, Tennessee, Alabama, Mississippi, Louisiana, Texas, Oklahoma, and Arkansas, area 579,215 square miles, had 13,687,987, against 10,989,859 at the former census; and Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Idaho, entered California, constituting the Western division, area 1,175,550 square miles, had 4,001,349 in 1900, compared with 3,102,289 in 1890. The number of 25 or more inhabitants in 1900 was 159, having increased from 124 since 1890, and the number of people living in


enemies, 558,740; private academies, 177,260; State universities and colleges, 36,201; private universities and colleges, 79,070; public professional schools, 10,360; private professional schools, 50,804; State normal schools, 43,352; private training-schools for teachers, 60,030; city evening schools, 203,000; private business colleges, 110,031; reform schools, 25,227; public deaf and dumb schools, 10,848; private schools for deaf and dumb, 494; public schools for feeble-minded, 11,149; private schools for feeble-minded, 498; Government Indian schools, 23,077; schools in Alaska, 3,856; private orphan asylums and other benevolent institutions, about 15,000; private kindergartens, about 95,000; art, music, elocution, cookery, etc., about 50,000. In both private and public graded schools and universities the total number of persons receiving instruction was 17,841,560; in special educational institutions, 17,882,750. The professional schools comprised 150 theological seminaries, with 968 professors and 1,607 students, of whom 181 were women; 100 law schools, with 1,105 professors and tutors and 13,642 students, of whom 170 were women; 123 medical schools, with 3,876 lecturers and instructors and 24,101 students, besides 21 homeopathic colleges, with 639 professors and 1,812 students; 67 dental colleges, with 1,184 instructors and 8,908 students; 28 schools of pharmacy, with 332 instructors and 4,850 students; 448 training-schools for nurses, with 11,509 students; and 12 veterinary schools, with 180 instructors and 461 students. An order was issued by the War Department last summer giving instruction for military instruction in the colleges and schools. Any school, college, or university that will undertake to maintain 100 of its scholars under military instruction will have one of the 100 officers of the United States army detailed for the purpose to instruct the students in the same way as soldiers of the regular army, and the Government will furnish rifles and ammunition and a limited number of field-guns for practising in firing.

The Army.—The legal strength of the United States army as fixed by the act of Congress approved on Feb. 2, 1891, is 37,901 regulars of cavalry, 750 officers and 12,620 enlisted men; 30 batteries of field and 126 companies of coast-artillery, 651 officers and 17,742 enlisted men; 30 regiments of infantry, 8,909 officers and 75,069 enlisted men; 3 battalions of engineers, 1,282 enlisted men; commanded by officers detailed from the corps of engineers; and the staff corps, Military Academy and West Point cadets, etc., 2,877 enlisted men. The total enlisted strength is 59,850, and the number of officers on the active list is 3,820. There were 100 officers and about 3,500 men in the Philippine native scouts and a Porto Rican regiment with 31 officers and 504 men, both bodies since disbanded. The army in the Philippines has been reduced from 40,000 to 17,000 men. The army act limits the enlisted strength of the United States army to 100,000 men. Recruits must be between eighteen and thirty-five years of age, of good physique, of good character, temperate, not less than 5 feet 4 inches in height, between 120 and 190 pounds in weight for infantry and under 165 pounds for cavalry and field-artillery, and able to speak and write English.

The National Guard of the States and Territories at the end of 1902 had 1,791 general and staff officers, 4,951 cavalry, 6,071 artillery, and 90,309 infantry. These numbers include 515 Indiana Territorial Volunteers, Guards, 48 Guam volunteers, 600 Porto Rican militia, and 73 Samoan volunteers. The State appropriations amount to the annual sum of $2,630,140. The number of militia authorized is 183,596. The total population liable to military service is 8,727,500.

The Navy.—The United States navy, completed and building or authorized, consists of 19 first-class battleships, 1 of the second class, 10 armored cruisers, 6 double-turret monitors, 4 single-turret monitors for harbor defense, 5 old monitors with low freeboard, 1 ram for port defense, 23 protected steel cruisers, 4 unprotected steel cruisers, 12 unarmored steel gunboats, 5 light-draft gunboats, 6 unarmored composite gunboats, 1 despatch boat, 1 dynamite cruiser, 1 training-ship, 18 destroyers, 36 twin-screw torpedo-boats, 8 submarine boats, 22 steam-vessels of the old navy, 13 wooden sailing vessels, 40 steam-propellers, 21 gunboats under 500 tons captured from Spain, and 3 auxiliary cruisers, 23 yachts, 16 colliers, and 11 special vessels purchased during the Spanish War; total number of vessels, 316, of which 223 were fit for service at the end of 1902, while 24 were not fit for sea service and 63 were not yet built or not completed. The newest battle-ships, costing from $3,000,000 to $4,000,000 apiece, have a displacement of 15,000 tons, a speed of 19 knots, 19 0.61-inch guns in the secondary battery, 12 4.7-inch rifles, 11 0.61-inch rifles, 8 1-inch, 12 3-inch, 2 6.1-inch, 8 4.7-inch, and 10 0.61-inch guns in the main battery, and the auxiliary armament will consist of 20 3-inch rapid-fire, 12 semi-automatic three-pounders, 2 field, and 8 machine guns. The armored cruisers, which cost as much as the battle-ships, have been increased in size to 14,500 tons in the latest development, with engines of 25,000 horse-power, giving a minimum speed of 22 knots, and their armament has usually been 4 8-inch breech-loaders and 14 6.1-inch quick-firing guns in the main battery and 18 3-inch, 12 three-pounders, and numerous smaller guns. The Tennessee and New Hampshire, authorized by Congress on July 1, 1902, will have the most powerful armaments of any cruisers, with the best protection, and a cruising radius of 6,500 miles at 10 knots and 1,000 miles at 16 knots. The hull will be protected by a 5-inch belt tapering at stern and stern to 3-inch thickness and extending from 5 feet below the water-line to the upper deck, while the upper deck is 2 inches thick. The armament will consist of 4 10-inch guns on the gun-deck, 22 3-inch quick-firing guns, and 1 8-inch quick-firing gun. The quick-firing battery 7 rounds can be served every minute.

The United States navy is manned by 1,346 commissioned officers, 461 warrant officers, and 29,205 men. The marine corps consists of 212 officers and 6,000 men.

Pensions.—There were drawing pensions on July 1, 1902, 4 widows and 4 daughters of soldiers of the Hawaiian National Guards, 1,317 widows of soldiers of the War of 1812; 903 survivors and 3,320 widows of soldiers who fought in the early Indian wars; 6,828 survivors and
8,017 affidavits of soldiers of the Mexican War; 277,905 army invalids, 87,046 army widows, 54,760 army nurses, 4,366 navy invalids, and 2,203 navy widows pensioned under the general laws on account of services after March 4, 1861; 438,118 army invalids, 148,201 army widows, 15,953 navy invalids, and 6,977 navy widows pensioned under the act of July 13, 1862, and 6,282 army invalids, 2,727 army widows, 329 navy invalids, and 127 navy widows of the war with Spain; total number of pensioners, 909,446. The amounts paid out during the year in pensions were $1,357,423,567 to 994,751 pensioners in the States and Territories, $11,845 to 96 pensioners in the insular possessions, and $646,529 to 4,036 pensioners outside of the United States.

Patents.—During the year ending Dec. 31, 1901, there were 43,973 applications for mechanical patents, 2,506 for design patents, 2,410 for trade-marks, 1,064 for registration of labels, 223 for registration of prints, and 115 for reissues of patents. The number of patents issued was 27,762, 2,683 reissues, 51; trade-marks registered, 1,058; labels, 676; prints, 878. The number of patents that expired was 19,147. There were 3,500 applications allowed that awaited the payment of fees, and 4,111 were forfeited for non-payment of fees. The United States was the reissue office of 3,843 patents of foreign countries, 21,245 of which were allowed, 1,045 patents to Germans, 908 to Englishmen, 370 to Scandinavians, 306 to French citizens, 156 to Austro-Hungarians, 66 to Swiss citizens, 55 to Scots, 54 to Belgians, 53 to Swedes, 37 to Italians, 35 to Victorians, 29 to Russians, 25 to Irishmen, 25 to New Zealanders, 20 to citizens of New South Wales, 20 to Norwegians, 19 to Danes, 16 to Dutchmen, 11 to Transvaaliers, 8 to South Australians, Argentinians, and Queenslanders severally, and 37 to other foreigners.

Public Lands.—Out of a total surface of 1,806,539,849 acres in the United States and Alaska 1,119,910,486 acres had been surveyed up to June 30, 1902, and 688,626,384 acres remained unsurveyed, including 365,100,311 acres in Alaska, mountain areas, unsurveyed lakes and rivers, private land claims, unsurveyed school lands and Indian and other reservations. The area of public domain subject to entry and settlement on July 1, 1902, was 391,579,307 acres, and of unsurveyed lands 501,705,109 acres; total, 893,284,416 acres. During the year 1,651,251 acres were patented, 4,843,846 acres; road selections, 156,132 acres; State selections, 2,508 acres. No lands were entered under the homestead and timber-culture acts. The forest reserves covered 4,909,890 acres in Alaska, 6,740,410 acres in Arizona, 8,784,009 acres in California, 3,113,180 acres in Colorado, 4,147,290 acres in Idaho, 7,427,320 acres in Montana, 205,902 acres in Nebraska, 3,338,080 acres in New Mexico, 57,120 acres in Oklahoma, 4,596,760 acres in Oregon, 1,177,129 acres in South Dakota, 1,029,760 acres in Utah, 7,006,000 acres in Washington, and 7,900,024 acres in Wyoming.

Commerce and Production.—The total value of foreign merchandise imported into the United States during the year ending June 30, 1902, was $203,210,948, compared with $182,722,165 in 1901. The total value of domestic exports was $1,355,481,601, compared with $1,460,422,506. Of the imports the value of $86,308,711 was brought in by vessels. Merchandise and manufactured products, $2,236,546; foreign coal, $102,198,002 in American vessels, and $744,706,253 in foreign vessels. Of the domestic exports the value of $115,967,630 was carried in land vehicles, $81,883,527 in water vessels, and $11,264,330 in foreign vessels. The total value of domestic exports, merchandise, and foreign, the foreign exports amounting to $203,237,240, was $1,381,719,401; total foreign trade in merchandise, $2,236,546. Imports were backed by $2,310,857,156 in 1901 and $2,244,424,296 in 1900. Of the domestic exports in 1902 the value of $851,460,312 represents agricultural, $39,075,999 mining, and $403,806,754 manufactured products, the proportion being 62.83:8.36:38.81 per cent, respectively. The total value of imported merchandise free of duty was $390,818,871 and the values of the various articles and classes of merchandise imported in the fiscal year 1902 were as follow: Chemicals, drugs, and dyes, free of duty, $7,474,670; coffee, $70,925,155; cotton, unmanufactured, $11,712,170; fruits, including nuts, $8,883,429; furs and fur-skins, undressed, $5,787,013; hides and skins, other than fur-skins, free of duty, $40,272,787; India-rubber and gutta-percha, crude, $22,852,977; paper stock, crude, $27,770,265; silk, unmanufactured, $42,635,361; textile grasses and fibrous vegetable substances, free of duty, $285,413; tin, $19,411,880; wood, unmanufactured, free of duty, $7,576,066; breadstuffs, $2,034,267; chemicals, drugs, dyes, and medicines, dutiable, $32,974,952; cotton, manufactures of, $44,460,192; earthen, stone, and chinaware, $8,988,156; flax, hemp, jute, and unmanufactured, $37,100,693; flax, hemp, jute, manufactures of, $38,370,205; fruits, including nuts, etc., $12,454,099; furs, manufactures of, $5,835,568; glass and glassware, $65,012,963; hides and skins, other than fur-skins, free of duty, $17,474,039; iron and steel, manufactures of, $36,488,995; jewelry and precious stones, $19,779,034; leather, and manufactures of, $11,317,785; metal objects, metal, and metal implements, $9,253,383; silk, manufactures of, $32,640,242; sugar and molasses and confectionery, $56,142,016; tea, $9,390,128; tobacco leaf, $15,211,671; tobacco, manufactures of, $2,484,822; vegetables, $7,039,835; wines, $8,921,138; wood and manufactures, dutiable, $16,967,534; all other dutiable articles, $130,655,015; all other articles free of duty, $144,774,469; total merchandise imports, $203,237,240.

The values of the exports of merchandise, the produce and manufacture of the United States in 1902 were as follows: Agricultural implements, $18,290,740; animals and animal products, $44,118,884;文章中提到的数字表明，美国在1902年的进出口贸易总额超过了200亿美元。国内出口总额为1,381,719,401美元，而进口总额为2,244,424,296美元。这一时期的出口商品主要包括棉花、咖啡、茶叶、橡胶、木材、医药用品、油漆、纸张、锡、玻璃、玻璃制品、皮革和皮革制品、各种金属制品等。进口商品主要以化学制品、药物、染料、木材和木材产品、食用油和油制品、棉花、家具和家具制品、金属制品、纺织品和纺织制品为主。

The imports into the United States from Cuba were $34,584,984, and exports to Cuba, $25,100,453; imports from Porto Rico were $8,297,422, and exports to Porto Rico, $8,427,231. Exports from Hawaii were $24,700,429, and exports to Hawaii were $19,000,000; imports from the Philippines were $6,612,700, and exports to the Philippine Islands were $1,600,000. The increase in the former was over 7 per cent. from those of 1901. Exports of farm-products fell off most heavily. The decrease in corn exports was nearly $50,000,000, or nearly 25 per cent., and nearly $10,000,000 in copper, $2,000,000. The exports of manufactured goods fell off from $412,000,000 to $403,750,000, but apart from iron and steel and copper goods, there was an increase of $12,500,000 in dairy products, nearly $10,000,000 in butter, $27,000,000, and $5,500,000 in producing an average of 380 gallons of milk, 2,090,000,000 gallons altogether, worth, at 8 cents a gallon, $167,200,000; total value of dairy products, $50,750,000. The imports of American silver coin in the year ending June 30, 1902, were $3,870,369; of foreign gold coin, $12,393,992; of gold bullion, $8,486,745; and of gold in ore, $24,815,697. The imports of American silver coin were $518,397; of foreign silver coin, $3,751,444; of silver bullion, $6,013,078; of silver in ore, $7,055,635. The exports of gold coin were $29,370,841; of gold bullion, $37,234,010; of gold in ore, $18,587; of silver coin, $209,291; of silver bullion, $43,885,925; of silver in ore, $76,635. The total gold imports were $32,021,254; exports of domestic silver were $1,961,435, and of foreign gold, $1,807,512. The total silver imports were $28,232,254; the exports of domestic silver were $45,971,240, and of foreign silver, $3,761,414. The United States in the census year 1900 was 2,105,102,510 bales. Of wheat, 522,229,505 bushels: of oats, 809,128,589 bushels; barley, 48,925,433 bushels: of rye, 25,575,925 bushels; of corn, 126,711,996 bushels; of hay, 50,110,066 tons; of potatoes, 210,926,987 bushels; of rice, 285,750,000 pounds; of hops, 208,000 bales of 180 pounds: of flaxseed, 20,080,000 pounds of linseed, 11,564,567 pounds of apples, 175,397,626 bushels; of peaches, 15,435,623 bushels; of pears, 6,625,417 bushels. The number of farm animals on Jan. 1, 1901, was 13,537,534 horses, value $903,988,442; 2,066,127 mules, value $111,717,092; 16,592,360 cows, value $514,812,106; 27,010,054 oxen and other cattle, value $689,498,260; 41,893,065 sheep, value $339,964,701; total value, $2,212,756,578. There were 5,739,578 farms on June 1, 1900, of which 5,537,731 bad buildings. The total acreage was 841,901,546, of which 414,733,141 acres were improved and 426,408,355 acres unimproved. The total estimated value of farm property was $90,514,001,388; value of land improvements, $13,114,422,058; value of buildings, $3,860,183,191; value of implements and machinery, $761,291,550; value of live stock, $3,075,650,041; value of farm-products in 1899, $4,739,118,782; value of products fed to live stock, $293,441,049; value of products not fed to live stock, $3,764,177,760; expenditure for labor, $305,305,921; expenditure for fertilizers, $4,783,757; number of farms worked by owners, $3,713,571; number of number rented on shares, 1,273,368. The number of farms worked by white persons was 4,970,129; by negroes, 746,717. There were about 11,000,000 dairy cows in 1899. In California, 765,000 of a ton of butter, an average of 130 pounds, of the total value of $557,400,000, at an average price of 18 cents a pound; 1,000,000 cows producing 300,000,000 pounds of cheese, worth, at 9 cents a pound, $27,000,000; and 5,500,000 cows producing an average of 380 gallons of milk, 2,090,000,000 gallons altogether, worth, at 8 cents a gallon, $167,200,000; total value of dairy products, $50,750,000. The imports of butter in 1902 were 10,333,007 pounds to Great Britain, value $1,924,408; 206,582 pounds to Germany, value $32,080; 966,067 pounds to Canada, value $140,545; 140,428 pounds to Cuba, value $30,526; 1,311,313 pounds to Brazil, value $164,407; total quantity, 16,002,169 pounds, value $2,745,597. The number of hogs packed during the year ending March 31, 1902, was 30,325,000. The cotton-crop of 1902 was 10,701,453 bales averaging 487 pounds. The consumption of the United States and Canada was 4,539,018 bales and the exports to Europe were 5,448,787 bales; total, 10,979,805 bales. The consumption of Southern mills in the year ending June 30, 1902, was 4,037,000 bales. There were 21,559,000 spindles in operation, one-fifth of the total number in the world. The number of spindles in Southern mills increased from 1,500,000 in 1890 to over 5,000,000 in 1900. The sugar-crop in 1902 was 310,000 tons of cane-sugar in Louisiana and 163,126 tons of beet-sugar. The consumption of the United States in 1902 was 1,992,330 tons refined from imported sugar, including 300,070 tons from Hawaii, 66,279 tons


$20,780,766. The average toll per message was 22.7 cents.

The American Telephone Company on Jan. 1, 1901, had 523,103 miles of wire on poles, 17,847 miles on buildings, and 4,200 miles of submarine wire. The total length of wire was 1,729,819 miles. The number of exchanges was 1,411; branch offices, 1,594; number of circuits, 862,467; number of switches, 1,902,647; number of central office employés, 40,864. The number of instruments was 2,255,806. The number of conversations was over 2,245,000,000 during the year, an average of 7,351,701 a day. The long-distance telephone system had 14,880 miles of poles and cable and 198,684 miles of wire.

Railroads.—The length of railroads in the United States as estimated by the Interstate Commerce Commission was 197,237 miles in 1901, including 1,182 miles of unofficial lines. The increase in the year was 2,682 miles. The number of miles operated in 1901 is estimated at 195,886. The capital stock of the railroads was $5,978,796,249; bonded debt, $6,035,408,741; gross earnings, $1,612,488,826 in 1901; net earnings, $220,629,727; net capitalized investment, $1,495,305,169; net working capital, $283. The railroad mileage in 1902 is estimated at 195,886 miles, with 70,166 miles of second track and sidings; total length of track, 265,892 miles. The cost of railroads and equipment was $10,117,752,155, besides $1,076,516,412 invested otherwise. Including unfunded debt, sinking-funds, and current accounts, the total stock and liabilities amounted to $12,026,900,521, while assets were figured at $13,508,029,032, giving a surplus of $381,028,511. On December 31, 1900, 1,994,974 miles operated in 1901 were carried 500,000,790 passengers and 1,684,406,481 tons of freight. Receipts from passengers were $330,710,686; from freight, $1,126,267,652; from miscellaneous sources, $125,478,488. The surplus earned during the year after paying interest and dividends was $111,308,104.

Foreign Relations.—The ratifications of the Hay-Pauncefote treaty, signed at Washington Nov. 18, 1901, were exchanged on Feb. 21. On Jan. 19, 1902, the Washington Secretary Hay and the Colombian Chargé d’Affaires, Tomas Herban, relative to the completion of the Panama ship-canal by the United States, and the purchase of the same, were signed at Washington. The United States, retaining its rights in the canal, will pay to Colombia for the purchase of its interest in the canal $100,000,000. The canal, from the mouth of the Panama River to the Atlantic Ocean, will be 50 miles long and 250 feet wide, and it is estimated that the cost of construction will be $300,000,000. The United States, in the construction of the canal, will have the exclusive right for the term of one hundred years, renewable at the option of the United States for periods of similar duration to construct, operate, and protect the maritime canal, with or without locks, such canal to be of sufficient depth and capacity for vessels of the largest tonnage and greatest draft now engaged in commerce, and such as may be reasonably anticipated, and also the same rights for the construction, operation, and protection of the Panama Railroad and of railway telegraph and telephone lines, canals, dikes, dams, and reservoirs and such other auxiliary works as may be necessary. To enable the United States to exercise the rights and privileges granted by this treaty the Republic of Colombia grants the use and control, for the term of one hundred years, for the use and benefit of the United States, of a zone of territory along the route of the canal 15 kilometers in width on either side thereof, measured from its center line, including therein the necessary auxiliary canals, not exceeding in any case 15 miles from the main canal, and other works, together with 10 fathoms of water in the Bay of Limon in extension of the canal, and at least 3 marine miles from mean low-water mark from each terminus of the canal. This grant shall not include the cities of Panama and Colon, except so far as lands and other property therein are now owned by or in possession of the canal or railroad company, the number of soldiers on the territory, and the United States shall continue to guarantee their neutrality and the sovereignty of Colombia. In furtherance of this provision there shall be created a joint commission by the governments of Colombia and the United States that shall establish and enforce sanitary and police regulations. The rights and privileges granted to the United States shall not affect the sovereignty of the Republic of Colombia over the territory within whose boundaries such rights and privileges are to be exercised. The United States freely acknowledges and recognizes the sovereignty and disavows any intention to impair it in any way whatever or to increase its territory at the expense of Colombia or of any of the sister republics in Central or South America, but bas engaged that it will take such measures at home and abroad as may be necessary to strengthen the power of the republics on this continent and to promote, develop, and maintain their prosperity and independence. The Republic of Colombia authorizes the United States to construct and maintain at each entrance and terminus of the proposed canal a port for vessels, with suitable lighthouses and other aids to navigation, and the United States is authorized to use and occupy within the limits of the zone fixed by this convention such parts of the coast-line and islands adjacent as are necessary for this purpose, including the construction and maintenance of breakwaters, coaling stations, docks, and other appropriate works. The United States will give attention to works of drainage along the line of the canal in order to prevent the invasion of epidemics, will organize hospitals, and will supply the towns of Panama and Colon with the necessary aqueducts and drainage-works in order to prevent the spread of contagious disease on the part of the inhabitants. The United States, in the exercise of their powers within the zone of canal territory, shall have the exclusive right to construct, operate, and protect such works and installations as may be necessary for the construction, operation, protection, and extension of the canal and auxiliary works, and for the transportation of military, naval, or other vessels. The United States shall have the exclusive right to construct, operate, and protect such works and installations within the zone of territory. The United States shall have the exclusive right to regulate and control the use of all watercourses or in other ways arising out of the construction or operation of the canal, shall in each case be appraised and settled by a joint commission. The ports leading to the canal, in-
including Panama and Colon, shall be free to the commerce of the world, and no duties or taxes shall be imposed except upon merchandise destined to be introduced for the consumption of the rest of the Republic of Colombia, or upon vessels touching at the ports of Colon and Panama and which do not cross the canal. No similar taxes shall not be imposed on the canal, the vessels that may use it, or property and effects appertaining to the canal or railroad nor contributions of a personal character upon individuals in the service of the canal. The United States shall have authority to protect and make secure the canal, as well as railways and other auxiliary works and dependencies, and to preserve good order and discipline among the laborers and other persons who may congregate in that region, and to make and enforce such police and sanitary regulations as may be necessary to preserve order and public health and to protect navigation and commerce from interruption or damage. The Republic of Colombia may establish judicial tribunals within said zone, which shall have exclusive jurisdiction of all controversies between citizens of the Republic of Colombia or between citizens of any foreign nation other than the United States.

Subject to the general sovereignty of Colombia of the said zone, the United States may establish judicial tribunals thereon, which shall have jurisdiction of all controversies between citizens of the United States and citizens of any foreign nation other than the Republic of Colombia; and of all controversies growing out of or relating to the construction, maintenance, or operation of the canal, railways, and other properties and works. The United States and Colombia engage jointly to establish judicial tribunals, which shall have jurisdiction of all controversies between citizens of the United States and citizens of Colombia, and between citizens of nations other than Colombia or the United States; and also of all crimes, felonies, and misdemeanors committed within said zone, and of all questions of admiralty arising therein.

The two governments shall agree upon the laws and procedure which shall govern this tribunal, and it shall make provision for the capture, detention, and delivery within said zone of persons charged with the commission of crimes, felonies, or misdemeanors within said zone, and without said zone, the works of the canal, the railways, and their auxiliaries are declared of public utility, and in consequence all areas of land and water necessary for the construction, maintenance, and operation of the canal and the other specified works may be expropriated in conformity with the laws of Colombia. The indemnities awarded by a joint commission for such expropriation shall be borne by the United States, but the appraisal of said land and the assessment of damages shall be based upon their value before the commencement of the work upon the canal.

The canal, when constructed, and the entrance thereto shall be neutral in perpetuity. The Government of Colombia shall have the right to transport over the canal its vessels, troops, and munitions of war at all times, without paying charges of any kind. This exemption is to be extended to the auxiliary railroads for the transport of personnel of the Army of the Republic of Colombia or of the Department of Panama, or of the police force charged with the preservation of public order outside of said zone. The United States shall have full authority to establish and enforce regulations for the use of the canal, the railways, and the entering ports and auxiliary works, and to fix rates of tolls and charges.
The joint commission referred to shall be established as follows: The President of the United States shall nominate two persons and the Emperor of Russia two persons to constitute the commission, and they shall proceed to a decision; but in case of disagreement of the commission an umpire shall be appointed by the two governments, who shall render the decision. All decisions by a majority of the commission or by the umpire shall be final.

A dispute with Russia regarding the seizure of 4 American sealing vessels by a Russian war vessel in Bering Sea was referred before the constitution of The Hague Court of Arbitration to Dr. Asser, the Dutch jurist, but the award was given under the sanction of The Hague Tribunal. The vessels were chased and seized by the Russian cruiser, and the American seamen were compelled to work. The seizures were made without warning, and were not afterward confirmed by any court of maritime jurisdiction. The Russian Government acknowledged that in two cases its naval authorities were at fault, and the arbitrator awarded $38,750 and $1,486 respectively, with interest at 6 per cent. from September, 1892. In the other cases, in which $101,330 and $150,720 were claimed, the Russian Government contended that the perpendicular vessels and the imprisonment of Capt. Lewis and White were legal, as they were guilty of illegal sealing in Russian territorial waters. The American delegate, Mr. Herbert, President of the Russian Government claims rights in Bering Sea and adjacent waters and will admit jurisdiction only over territorial waters, extending a marine league from the territorial line, and this line shall be fixed by treaty, and in such case the treaty binds only the parties to the agreement. Mr. Komaroff, the Russian delegate, claimed for Russia by custom a wider extent of territorial waters and also the right to chase and capture beyond territorial waters vessels guilty of unlawful fishing within the territorial waters. The arbitrator upheld the position taken by the United States that the right of seizure extends only to the limit of territorial waters, one marine league from shore, and condemned Russia to pay respectively $38,686 with interest from 1893, and $110 with interest from 1893. The indirect claims for the prospective catch of the illegally detained vessels was disallowed.

The United States Government failed to reach a modus vivendi with Great Britain with regard to pelagic sealing before the season of 1902. It was proposed in Congress to kill off the seal herd on Pribilof Islands. On Jan. 24, 1903, a convention was signed by Secretary Hay and the British ambassador, Sir Michael Herbert, for the reference of the Alaska boundary dispute to a tribunal of 6 impartial jurists, 3 to be selected by the United States and 3 by Great Britain, all questions at issue, including the final award, to be decided by a majority vote of the tribunal. The tribunal shall consider in the settlement of the matter the Anglo-Russian boundary treaty of Feb. 28, 1825, and the treaty of March 30, 1867, between the United States and Russia, by which Russia ceded Alaska to the United States.

In interpreting the treaty of 1825 the tribunal shall decide what is intended as the point of commencement of the boundary-line, what channel is to be followed in the settlement of the points in this channel, and what course the boundary-line is to follow between points. The tribunal will decide whether—in extending the line of demarcation northward from this point, following the crest of the mountains parallel with the coast two persons, and they shall proceed to a decision; but in case of disagreement of the commission an umpire shall be appointed by the two governments, who shall render the decision. All decisions by a majority of the commission or by the umpire shall be final.

A dispute with Russia regarding the seizure of 4 American sealing vessels by a Russian war vessel in Bering Sea was referred before the constitution of The Hague Court of Arbitration to Dr. Asser, the Dutch jurist, but the award was given under the sanction of The Hague Tribunal. The vessels were chased and seized by the Russian cruiser, and the American seamen were compelled to work. All decisions by a majority of the commission or by the umpire shall be final.

The tribunal will decide whether—in extending the line of demarcation northward from this point, following the crest of the mountains parallel with the coast two persons, and they shall proceed to a decision; but in case of disagreement of the commission an umpire shall be appointed by the two governments, who shall render the decision. All decisions by a majority of the commission or by the umpire shall be final.
one an English, the other a Russian jurisconsult; Mexico chose Senator Guarnaschelli, an Italian, and M. de Savornin Lohman, a Dutch member of the court. Judge Guarnaschelli being unable to accept, M. Assenn was appointed by the Mexican Government. The 4 members met at The Hague on Sept. 1 and chose Dr. Matzen, a Danish jurist, as umpire. The Pious fund originated in 1867, and consisted of money collected in Mexico to enable the Jesuits to carry on their missionary labors in the two Californias. After the expulsion of the Jesuits from Spanish dominions in 1767, the property of the fund was confiscated by the Government, but it was provided that it should remain subject to the charges imposed by the original donors. The Dominicans took over the fund in possession of the Mexican Treasure, when an undertaking was given that 6 per cent. interest would be paid in perpetuity on the full value. This pledge was kept likewise. The French Government made 21 missions, which occupied the sites of the principal cities of California. About twenty years after the cession of Upper California to the United States a treaty was concluded between the United States and Mexico, by which settlement of claims of Mexican citizens against the United States and of United States citizens against Mexico. Each Government appointed an arbitrator, and the arbitrators chose Sir Edward Thornton, British minister at Washington, to be umpire. The arbitrators having disagreed in the matter of the Pious fund, the umpire decided that it amounted to $1,435,032, and that half belonged to the clergy of the United States, and the other half to Mexico. Accordingly the decision was that Mexico should pay interest at 6 per cent. on half the total sum for twenty-one years, amounting to $804,070 up to Feb. 2, 1869, the date at which the umpire's decision was given. The decision was paid in installments from 1877 to 1890, but the interest that has accrued since 1890 has not been paid, although the claim of the Californian bishops has been paid. Sir Edward Thornton, the umpire, in his report, said that the decision of the court was res adjudicata; second, if not governed by that principle, whether it was just; third, if the decision went against Mexico, in what currency should it be paid. The court held that the principle of res adjudicata, which was acknowledged to be applicable in international law, as it is in the civil law of most European countries, did not apply in this case because Sir Edward Thornton had no jurisdiction to make his award; and, in case it was found that he had, because his award did not cover the present claim. The Tribunal declared that Sir Edward Thornton's decision to make his award, and that, as the principles and evidence on which it was based were identical with those governing the present claim, the matter was res adjudicata. The full amount of the claim, which is $1,420,689, was awarded to the United States for the benefit of the bishops of California, the claimants in behalf of the Church. The court decided that this could be paid in Mexican currency. The Mexican Government was, moreover, directed to pay in perpetuity the annual sum of $43,051. The court was opened on May 1, 1891, and the final award was made. In the dispute with Germany regarding Samoa the decision of King Oscar of Sweden was against the United States. (See SAMOA.)

Sir Robert Bond, Premier of Newfoundland, arranged a reciprocity convention with Secretary Hay in September, 1902. He negotiated a convention with Secretary Blaine in 1900, but the British Government rejected the Blaine-Hay convention in order that Canada might have an opportunity to effect a similar arrangement. If Canada failed to secure this within a reasonable time, the British Government received an assurance that the Imperial Government would not withhold its consent longer to an arrangement it might make for the advantage of Newfoundland. The principle of the Bond-Blaine convention was free salt for free fish. It provided for the admission of Newfoundland dried codfish into the United States free of customs duties. The American vessels engaged in the deep-sea fisheries for cod, haddock, halibut, etc., on the Grand Banks and adjacent waters may freely buy and sell fish, with liberty of herring, capelin, and light in the Newfoundland inshore fisheries. At present American fishermen obtain salt in Newfoundland under a modus vivendi arranged in 1888 by paying an annual license fee of $50 per vessel, or $120 to $200 a year. In 1901 in Newfoundland waters 76 American vessels bailed and supplied Newfoundland salt to probably as many more at Gloucester. During the winter herring can be obtained nowhere else. The Canadians, who cannot be restricted in any way from fishing in Newfoundland, being British subjects, desire the same reciprocity with the United States for fishery products that the Newfoundlanders do. The supply of salt, however, in Canadian waters is so limited or inaccessible that at least two-thirds of the Dominion fishermen obtain theirs in Newfoundland. Reciprocity for the codfish trade, if the New England fishermen would find it as difficult to fish on the banks as the French do, who as foreigners can only get bait by smuggling. The French by the Treaty of Utrecht, made in 1713, have the right to trawl in the territorial waters of the west and northeast coasts of Newfoundland. Americans by the treaty of 1818 have the right to fish on the west shore and also are entitled to frequent the southwest coast. All these shores are remote and the inshore fishery rights are valueless for the bank fishery. The New England fishermen on the Newfoundland banks is in value about $4,000,000 a year, only 10 per cent. of the total fisheries of the United States and not more than half the product of the province of Nova Scotia, those of the maritime provinces who wish to obtain free entry for their fish into the United States to compete with the New England fishermen. The Newfoundlanders threaten no serious competition. They depend on their inshore fisheries, and what cod they cure after their fashion by drying it after it is pickled in the wind and sun. Of this peculiar product 35,000 quintals is exported to the United States, valued at $150,000 paying a duty of 3 cent a pound. The Newfoundlanders would like to have the duty on their salt cod removed in the United States and Porto Rico, and on salt herring, of which American vessels took away 200,000 barrels in the winter of 1901, and on other fishery products. The Bond-Hay convention goes much further to meet their wishes than the Bond-Blaine convention. It offers to admit free of duty all fishery products, except fresh fish, and also crude minerals. If it is made on Oct. 15, the Newfoundlanders can market in the Atlantic cities not only dry fish, but green fish, in which state, simply packed in the holds of the schooners with salt.
between, cod is preserved by the New England fishermen, as well as by the fishermen of New Brunswick and Nova Scotia, and is liked best by the American consumers. For these new concessions Newfoundland agrees to admit certain American codfish, and other articles at the same fixed rates of duty that are imposed on Canadian products of the same kind, and if the duties are made lower for Canada or any other country the United States will, while the convention remains in force also will have the benefit of the reduction.

An American, Capt. A. A. Rosehill, laid claim to Marcus Island, whence a Japanese colony ships guano, dried fish, stuffed birds, and feathers. His claim to the island being disputed, he fitted out an expedition at Honolulu for the purpose of taking forcible possession of the guano deposits there. The Japanese minister notified the Government at Washington that Japan claims the island as one of the Bonin group, in which it was officially included in 1898. Japan sent a cruiser to a diplomatic official to defend his claim, and this official bore a message from Washington to Capt. Rosehill, warning him to offer no forcible opposition. The American claimant landed on the island in 1898, and finding it unoccupied, raised the American flag, and put up a monument where he deposited a record of his claim to the island. In 1901 he sold a bond at Washington such as is required to perfect a legal claim to a guano island under American protection. Meanwhile Japanese had come, and finding the island unoccupied had shipped away guano, and in 1898 formed a permanent settlement of about 200 people. Capt. Rosehill arrived on July 30, but sailed away again on receiving the message from the Japanese officer. The Japanese have long known the island, and since 1879 their fishermen have visited it. The American discoverer filed a claim at Washington against the Japanese Government for possession of the island and indemnification for the guano taken away.

The principal items of increased expenditure were as follow: Rebate of tax on tobacco, $3,000,000; refunding of excess of customs deposits, $2,500,000; for deficiency in postal revenues, $4,900,000 for the twelfth census, $1,800,000 for public buildings, $4,900,000 for improving rivers and harbors, $10,500,000 for the quartermaster’s department, and $6,300,000 for the subsistence department of the army. There was a decrease in the annual interest on the public debt of $3,234,934.

The detailed receipts and expenditures for 1902, compared with those for 1901, are as follows:

The gross gold in the Treasury at the close of the calendar year was $616,750,218, which is the largest amount of gold ever held by the Treasury.

This colossal holding never has been approached by any nation except Russia, which accumulated $598,000,000 a few years since during the effort to establish the gold standard in that empire.

The cash balance at the close of the calendar year, 1902,
available for ordinary expenditure, was $211,681,177, of which $150,556,000 was held in United States national bank depositories, and the remaining $61,000,000 was in the Treasury vaults. A great growth in the use of depositary banks has taken place during the past five years. The number of such banks increased from 186 in 1897 to 700 at the close of 1902, and in that time their holdings of public funds increased from about $15,000,000 to $150,000,000.

The following tables show the assets and liabilities of the Treasury for the years ended Dec. 31, 1901 and 1902:

Jan. 1, 1903, the circulation per capita was $29.43, against $28.69 for Jan. 1, 1902.

The Supreme Court.—Olive Wendell Holmes, of Massachusetts, was appointed Associate Justice in place of Horace Gray, deceased, and took his seat on the bench Dec. 8, 1902.

The number of cases docketed and pending at the beginning of the October term, 1901, was 732, of which 377 were disposed of during the term. The number actually considered by the court was 375, of which 108 were argued orally and 128 were submitted on printed arguments. Among the cases of general interest decided were the following:

**Controvercy between States.—** The court, in an opinion delivered by Chief Justice Fuller, April 7, 1902, overruled the demurrer of the State of Colorado in the case of Kansas vs. Colorado. The case involved the right of Colorado to appropriate for purposes of irrigation the waters of Arkansas river, which Kansas sought by an original action to restrain on the ground that the stream flows through Kansas and the people of the latter State are injured by Colorado's appropriation of the water. Colorado contested the jurisdiction of the court in the case and filed a demurrer. The court held that the case is one in which it can properly assume jurisdiction, and the next proceeding will be for Colorado to answer the bill of complaint.

**Insolvent National Banks.—** The case of Studebaker vs. Perry, receiver of the National Bank of Kansas City, involved the question whether the Comptroller of the Currency acting under the national banking laws, can validly make more than one assessment upon the shareholders of an
insolvent national banking association. The court held that several assessments could be legitimately made if necessary.

Statutory Construction.—Rodgers vs. United States, decided April 7, 1902. This was a suit brought by Admiral Rodgers of the navy to recover money claimed to be due under the law known as the naval personnel act, approved March 3, 1899. The Court of Claims decided the case in favor of the United States, and the Supreme Court affirmed that decision. Section 7 of the act referred to abolished the rank of commodore, at least as far as respects the active list of the line of the navy, and lifted those in that rank to that of rear-admiral. It is a canon of statutory construction that a later statute, general in its terms and not expressly repealing a prior special statute, will ordinarily not affect the special provision of such earlier statute.

Patent Cases.—In the case of Excelsior Wooden Pipe Company vs. Pacific Bridge Company, decided May 5, 1902, the question of jurisdiction was involved, and interesting dictums were pronounced. If a suit is brought to enforce or set aside a contract, though such contract be concluded out of the State, the suit is under the patent laws, and jurisdiction of the Circuit Court can only be maintained upon the ground of diversity of citizenship. It is sometimes difficult to determine whether the action be upon the patent or upon a contract.

The case of the Carnegie Steel Company vs. Cambria Iron Company was for recovery of damages for infringement of a patent for a "method of mixing molten pig metal." The decision was in favor of the Carnegie Company, but a dissenting opinion was delivered by Mr. Justice White, in which the Chief Justice, Mr. Justice Harlan, and Mr. Justice Brewer united. Their judgment was that the decision of the court tended "to put the patentee in a position where, without invention on his part, and without the possession by him of lawful letters patent, he is allowed to exact tribute from the steel and iron making industry, whenever those engaged in such industry desire to increase their plants or to more conveniently and satisfactorily conduct their operations, so as to keep pace with the natural evolution of modern industrial development."

Extradition Treaty with Prussia.—The case of Terlinden vs. Ames was an extradition proceeding involving the status of the Kingdom of Prussia since its incorporation into the Empire of Germany. Terlinden, a citizen of Prussia, was apprehended in Chicago, where the German authorities made application under our treaty with Prussia of 1855 for extradition for an offense committed in Prussia. The proceeding was resisted on the ground that the absorption of Prussia had had the effect of nullifying the treaty. Application was made for a writ of habeas corpus, which was denied by the lower courts. The Supreme Court sustained the lower courts in their action. Treaties may be terminated by the absorption of powers into other nationalities and the loss of separate existence; but as the German Government had recognized this treaty, and the Executive Department of our Government had acted in the same direction, it was held not to be within the province of our courts to interfere.

Treaty with Russia.—Tucker vs. Alexandroff, decided Jan. 6, 1902. This case presented an important international question. Alexandroff, a subject of the Tsarist government, came to this country from Russia as a member of the crew of the Vairag, a Russian cruiser under construction at Philadelphia. He deserted, announcing his allegiance to the Emperor, and declared his intention of becoming a citizen of the United States. He was arrested, charged with desertion, and committed to prison, subject to orders of the Russian vice-consul or commander of the cruiser. The United States District Court, upon a hearing on a writ of habeas corpus, ordered his discharge, and the Circuit Court of Appeals affirmed the decision. The Russian vice-consul at Philadelphia appealed the case, and the Supreme Court decided that, under the treaty with Russia, Alexandroff should be surrendered to the Russian Government. Although the Vairag was still upon the stocks when Alexandroff arrived in Philadelphia, before he deserted she had been launched, and thereby became a ship in the legal sense. Chief-Justice Fuller and Justices Harlan, White, and Gray dissented. They held that the Vairag was not, at the time Alexandroff deserted, a Russian ship of war in the sense that the authorities could take action to enforce the jurisdiction of that country over the men intended to become part of her crew.

New York Transfer Tax.—Orr vs. Gilman, decided Jan. 6, 1902. A transfer tax imposed under the laws of the State of New York, under the following circumstances: David Dows, Sr., died in 1890, leaving a will containing a power of appointment to his son, David Dows, Jr., which will was duly admitted to probate. David Dows, Jr., died in 1899, leaving a will, in which he exercised the power of appointment for his two sons. James A. L. Dows, Jr., which will was duly admitted to probate. James A. L. Dows, Jr., died in 1899, leaving a will, in which he exercised the power of appointment for his four sons. The latter will was admitted to probate in 1899. The New York State law of 1891 provided that when a person exercised a power of appointment derived from any disposition of property, such appointment, when made, shall be deemed a transfer taxable in the same manner as though the property to which such appointment related belonged absolutely to the donee of the power. It was argued that the grandchildren acquired vested rights under the will of David Dows, Sr., and that it was not competent for the State, by an enactment passed in 1897, to extend its tax or affect the property that passed to the grandchildren under the will. The court held that the subject was one of State law, and must follow the construction put upon the law by the courts of the State; and that it was not in conflict with the provisions of the federal Constitution.

Federal Lepage Tax.—In Eisman, collector, vs. Martinez, administrator, decided March 17, 1902, a test case on the application of the federal legacy tax law to estates of persons domiciled abroad, it was held that no tax is imposed upon the passing of any legacy or distributive share arising out of the personal property of a non-resident alien, who dies without the United States, leaving a will made and executed at his foreign domicile pursuant to which he gives his property to a non-resident alien legatee; or, in case of an intestate whose property, by the laws of his foreign domicile, passes to his heir, also a non-resident alien, and who leaves certain property within the United States exceeding $10,000 in value.

In Moore, collector, vs. Ruckgaber, executor, decided on the same date, it was held that the personal property of a non-resident testatrix, actually located within the United States at the time of her death, is deemed not to have a situs in the United States, and is therefore exempt from a tax. The transmission or receipt of personal property of the non-resident testatrix was held.
not subject to legacy tax under the act of June 12, 1890.

The sections of that act (now repealed) imposing a legacy tax did not apply to deceased persons domiciled abroad who left property by will executed within the United States.

Carrier's Liability.—The Kesington, decided Jan. 6, 1902. The Kesington, a steamer running between Antwerp and New York, took on board at Antwerp as passengers, etc., and Miss Bleecker, the wife and daughter of a United States naval officer. Their baggage was totally destroyed on the voyage, on account of bad storage conditions. The company issued a ticket provided that the company should not be liable for baggage beyond $250 in each case, unless an increased value was declared and an additional sum paid. It was in the United States District Court that the stipulation as to the value of the baggage was valid, and judgment was rendered against the company for $250 in favor of each passenger, which was affirmed by the Circuit Court. The Supreme Court reversed the decision, and allowed actual damages with interest. Exemptions limiting carriers' responsibility for the negligence of their servants are unjust and unreasonable, and such conditions are in conflict with public policy. One of the conditions provided that all questions arising were to be settled according to the laws of Belgium, which authorized the conditions, the contract having been made in that country; but such a contract cannot be enforced in this country in violation of the rule of public policy adopted by our courts.

Bankruptcy Law.—In the case of the Hanover National Bank v. Mowry, decided June 2, 1902, the court, in an opinion delivered by Chief Justice Fuller, decided the national bankruptcy law of 1898 to be constitutional. The court held that to be valid a bankruptcy law must be uniform throughout the United States, and further, that it is uniform "when the trustee takes in each State whatever would have been available to the creditors if the bankrupt law had not been in force in that State.

"The law is uniform, although it recognizes the local law in the matter of exemptions. The opinion said: "Congress may prescribe any regulations concerning bankruptcies in the States that are not so grossly unreasonable as to be incompatible with fundamental law; and we can find anything in this act on that subject which would justify us in overthrowing its action."

Interstate Commerce Commission Overruled.—In the case of the Interstate Commerce Commission v. the Chicago, Burlington and Quincy Railroad Company the right of the commission to reduce the terminal rate made by the railroads in Chicago on cars containing live stock was involved. The opinion affirmed the decision of the Circuit Court of Appeals, which refused to carry into effect the order of the commission reducing the rate from $2 to $1 per car. The court said: "Being constrained to the conclusion that the order of the commission was not sustained by the facts upon which it was predicated, we cannot enter into an investigation of the facts, even if it be conceded the record is in a condition to that end. In other words, many new and substantive findings of fact may be evolved upon which the order of the commission may be sustained. It follows that the decree of the Circuit Court is in accordance with the order of the commission was right and must, therefore, be affirmed."

Privacy of Telegrams.—The case of the United States v. Edward A. Mosely, decided Dec. 16, 1902, involves the right of the commission to withhold from the auditing officers of the Government copies of telegrams sent by it, as decided in Mosely's favor. The opinion was handed down by Justice McKenna.

Exclusion from the Mails.—The case of the American School of Magnetic Healing v. McGan-nulty, postmaster at Nevada, Mo., decided Nov. 17, 1902, involved the right of the Post-Office Department to refuse to deliver mail to the school, on the ground that its objects were fraudulent. The postmaster-general was declared invalid. The statute was only intended to cover cases of actual fraud in fact. Justices White and McKenna dissented.

Courts-Martial.—In an opinion rendered in the case of McLaughry v. Deming, May 19, 1902, it was held that an officer in the volunteer service cannot be tried by a court-martial composed of officers of the regular army. The invalidity of the court-martial case can be raised on a hearing on habeas corpus. The Chief Justice and Justice McKenna dissented.

Stanton Carver v. McCloud.—In a habeas corpus proceeding, instituted to bring before the court the case of Oberlin M. Carter, formerly a captain in the Engineer Corps of the army, serving a term of imprisonment in the Leavenworth Penitentiary under the sentence of a court-martial. Carter was tried and convicted and was sentenced to be dismissed from the army and pay a fine of $5,000, and to be imprisoned in the penitentiary for 5 years. The principal point made was that, having paid the fine and been dismissed from the army, he could not be imprisoned in the penitentiary without punishing him twice for the same offense. The court held that he had been convicted under separate charges of distinct offenses, for which the court-martial was empowered to punish him. The rule was reiterated, that civil tribunals will not revise the proceedings of courts-martial, except for the purpose of ascertaining whether they had jurisdiction of the person and of the subject-matter, and whether of the judgment, they have exceeded their powers in the sentences pronounced.

Exclusion of Alien.—Fok-Yung-Yo v. United States, decided May 8, 1902. This case related to the privilege of transit of Chinese persons across the territory of the United States, and raised an inquiry as to the power of the judiciary to interfere with the action of the executive authorities of the Government in such matters. The conclusions of the court were as follow: The power to exclude or expel aliens is vested in the political departments of the Government, to be regulated by treaty or by act of Congress, and to be executed by the executive authority according to such regulations, except so far as the judicial department is authorized by treaty or by statute, or is required by the Constitution, to intervene. And this is true of the privilege of transit. By the treaty between the United States and China, of 1894, the privilege of transit across the territory of the United States could only be enjoyed subject to such regulations of the Government of the United States as might be necessary to prevent its being abused. Under existing regulations the action of the collector of customs in refusing transit cannot be interfered with by the courts. Justices Brewer and Pecking laid to command compliance with the order of the commission was right and must, therefore, be affirmed.

Tax on Merchandise Brokers.—Stockard v. Morgan, decided April 7, 1902. This case raised
the question of the validity of the Tennessee statute providing for the collection of a privilege tax on merchandise brokers. It was held that the statute violated the interstate commerce clause. The Constitution, it was said, is a compact among the States, and it is in effect a tax upon interstate commerce, and the fact is not altered by calling the tax one upon the occupation of the individual residing within the State while acting as the agent of a non-resident principal.

**Illinois Antitrust Statute.**—Connolly vs. Union Sewer-Pipe Company, decided March 10, 1902. This case grew out of the sale of pipe by the pipe company to Connolly and others, who, after securing it, declined to make payment on the ground that the company was an illegal combination for the restraint of trade under that law, and was a combination in violation of the Sherman antitrust law, and, further, a violation of the antitrust law of the State of Illinois. The case was heard later, and was declared invalid.

The ninth section of the statute declares that "the provisions of the act shall not apply to agricultural products or live stock while in the hands of the producer or raiser," thereby excepting the articles named under certain conditions from the operation of the statute. This clause the Supreme Court held to be class legislation and was held invalid. The court declared that with this clause. An antitrust law to be constitutional must apply indiscriminately to all combinations. The State has the power by appropriate legislation to protect the public morals, the public health, and the public safety; but if, by their necessary operation, its regulations looking to either of these ends amount to a denial to persons within its jurisdiction of the equal protection of the laws, they must be deemed unconstitutional and void. Mr. Justice McKenna filed a dissenting opinion.

**Illinois Mine Law.**—St. Louis Consolidated Coal Company vs. Illinois. This case involved the constitutionality of the Illinois statute providing for the inspection of mines. The law was declared unconstitutional, and required an inspection only of mines employing more than five miners, and that it gave a discretion to the inspectors to determine how many times a year a mine could be inspected and also what fees within certain limits should be charged for inspection. The court affirmed the decision of the Illinois Supreme Court and held the law to be invalid.

**Illinois Statute against dealing in Futures.**—In the case of Booth vs. Illinois, decided March 3, 1902, the Supreme Court upheld the validity of the Illinois statute against dealing in options on grain or other commodities. The statute attempts to corner the market, to influence it by spreading false reports, or contracts to buy or sell at a future time grain or other commodities, and Booth, a grain and provision broker, was indicted for violation of the statute and was convicted in the lower courts, and the case was heard in the United States Supreme Court. It was held that the statute was repugnant to the fourteenth amendment of the Constitution. Justice Harlan, in delivering the opinion of the court, said: "The statute is repugnant to the provision and that it was repugnant to the fourteenth amendment of the Constitution. Justice Harlan, in delivering the opinion of the court, said: "The statute is repugnant to the fourteenth amendment of the Constitution. Justice Harlan, in delivering the opinion of the court, said: "The statute is repugnant to the provision for the consideration of the Illinois Legislature. The courts have nothing to do with the mere policy of legislation. Justices Brewer and Peckham dissented. Kentucky Constitution affecting Interstate Commerce.—Louisville and Nashville Railroad Company vs. Eubank, decided Jan. 27, 1902. This case involved a section of the State Constitution of Kentucky prohibiting a greater charge for short than for long hauls on railroads, and its validity when the larger haul was beyond the State limit. Eubank alleged that he paid 55 cents a hundred pounds for transporting tobacco from Franklin, Ky., to Louisville, 134 miles, while only 12 cents was charged for transporting it from Nashville to Louisville, 50 miles further. It was held that the section in question was invalid as far as it was made applicable to or affected interstate commerce, the power of regulating which belongs to Congress exclusively. Justices Brewer and Peckham dissented.

**Foreign Insurance Companies.**—The case of Notting vs. Massachusetts, decided Jan. 13, 1902, involved the constitutionality of the law of that State prescribing penalties upon brokers who negotiate or make contracts in the State of Massachusetts with insurance companies that are not permitted to do business in the State. The decision was rendered by the court as to a law which interfered with interstate commerce. A contract of marine insurance is not an instrumentality of commerce, but a mere incident of commercial intercourse. The State, having the power to impose conditions upon the transaction of business by foreign insurance companies within its limits, has the equal right to prohibit the transaction of such business by agents or anyone, or by insurance brokers, who are to some extent the representatives of both parties.

**Street-Railway.**—Street-Railway Company vs. Detroit Citizens' Street Railway Company. The decision in this case was that the ordinance enacted by the city government of Detroit arbitrarily reducing street-car fares three cents was without binding effect. The decision was based on the ground that a previous ordinance had fixed the fares at five cents, such ordinance being in the nature of a contract. Justice Peckham, in delivering the opinion of the court, said: "It is a contract which gives the company the right to charge a rate of fare up to the sum of five cents for a single passenger, and leaves no power with the city to reduce it without the consent of the company."

**State Quarantine Regulations.**—Compagnie Francaise, etc., vs. Louisiana State Board of Health, decided June 9, 1902. An action was brought against the Louisiana State Board of Health for damages by the owners of a French steamer that sought to land passengers in New Orleans in 1898, but was refused. The passengers and cargo were from foreign ports free from any infectious disease, but there was a quarantine in force at New Orleans against yellow fever, and the Board of Health. But an unwise and ill-advised enactment is not necessarily for that reason invalid. It may be, as suggested by counsel, that the steady, vigorous enforcement of this statute will materially interfere with the handling or moving of vast amounts of grain in the West, which are now disposed of by contracts or arrangements made in the Board of Trade in Chicago. But the decision of the Supreme Court of Tennessee was reversed. When the tax is applied to an individual within the State, selling the goods of his principal, who is a non-resident of the State, it is in effect a tax upon interstate commerce, and the fact is not altered by calling the tax one upon the occupation of the individual residing within the State while acting as the agent of a non-resident principal.
stitution nor in conflict with treaties, but a distribution of the power of the State, as interfering with foreign or interstate commerce and in conflict with the Constitution and our treaties with foreign nations.

Colorado's Stock Quarantine.—The court sustained the constitutionality of the stock quarantine law of Colorado, in the case of Reed vs. Colorado. The law prohibits importation of cattle or other live stock into the State from points south of the thirty-sixth parallel of latitude, between the lines of the Constitution and our treaties with foreign nations.

State Tax Laws.—The case of the Cleveland Trust Company vs. Landes, involved the method of levying taxes on the shares of a corporation under the Ohio statute. This case cited the opinion of the State law, affirming the decision of the court below. What the Constitution or statutes of a State require as to taxation must be left to be decided by the Supreme Court of the State, while the Constitution of the United States vs. Connecticut.—Decided May 5, 1902. This case involved the constitutionality of the laws of Connecticut in regard to taxation of stock held by non-residents in a local corporation. The law was sustained, and the difficulty of adjusting a system of perfect equality in taxation was stated. Merely inequality in the results of a State tax law is not sufficient to invalidate it.

New Hampshire Law.—The case of Collins vs. New Hampshire involved the constitutionality of the New Hampshire law that forbids the coloring of oleomargarine yellow. The judgment of the Supreme Court of New Hampshire was affirmed by an equally divided court. The provision in question, therefore, remains in force.

Stamp Tax on Dramshop Bonds.—United States vs. Union National Bank. Under the laws of the State of Illinois and the ordinances of the city of Chicago, it is necessary for a person making application for a license as a saloonkeeper to file with the city collector a bond. The case of the United States vs. Ambrosini involved the question whether such bonds were subject to a stamp-duty under the war-revenue act of 1898. The case was decided in favor of the Government in the lower court. It was taken to the Supreme Court, where a decision was rendered, holding that such bonds were not taxable by the United States. The court said: "The legislation was enacted in the exercise of the police power for the safety, welfare, and health of the community, and it is conceded that that power is a power reserved by the States, free from federal restriction. The general principle is that as the means and instrumentalities employed by the General Government to carry into operation the powers granted to it are exempt from taxation by the States, so, likewise, those of the States exempt from taxation by the General Government."

Insurance Cases.—Northern Assurance Company vs. Ford. When a policy of insurance provides that notice of prior or subsequent insurance must be given by indorsement upon the policy or by other writing, such provision constitutes a condition the breach of which will void the policy. Parol evidence is inadmissible to contradict or vary the terms of a valid written instrument. The subject of waiver by agents was considered.

The decision in the case of Lewis vs. the Iowa Insurance Company, delivered Dec. 8, 1902, established a rule in regard to notes given for the payment of life-insurance policies. Many policies are issued, the insured giving a note or notes for the payment of the first premium, the notes bearing a stipulation that in default of payment when due the policy shall cease and determine. In some States it has been held that default of payment terminated the policy. In others it has been held that the company must pay the face of the policy, deduction, in case of default. If in a premium note, the amount thereof with interest. The Supreme Court held that the policy lapsed on default of payment of the note.

Knight Templar and Mason Life Indemnity Company vs. Jarman involved what is known as the suicide statute of Missouri. It was held that the policy must be paid in case the insured committed suicide while insane, notwithstanding it contained a provision of voidance in case of suicide whether the party was sane or insane.

Burt vs. the Union Central Life Insurance Company, decided Dec. 22, 1902. The question of the effect of murder upon a life-insurance policy when issued upon the life of the murderer was passed upon in this case. William E. Burt was insured. His policy was made payable to his wife, and, in case of her death, to his executors. Burt's wife died, and he was charged with her murder, and was found guilty and executed. The heirs of the estate made an effort to collect upon the policy, but the insurance company refused payment. The court affirmed the decision of the Court of Appeals, holding the policy invalid, on the ground that to sanction payment under the circumstances would be contrary to public policy. "It can not be that one of the risks covered by a contract of insurance is the crime of the insured. There is an implied obligation on his part to do nothing to wrongfully accelerate the maturity of the policy. Public policy forbids the insertion in a contract of a condition which would tend to induce crime, and as it forbids the introduction of such a stipulation, it also forbids the enforcement of such a condition in circumstances which can not be lawfully stipulated for."

ALABAMA, a Southern State, admitted to the Union Dec. 14, 1819; area, 52,250 square miles. The population, according to each decennial census since admission, was 127,001 in 1820; 339,227 in 1830; 595,756 in 1840; 771,023 in 1850; 964,401 in 1860; 958,992 in 1870; 1,242,565 in 1880; 1,413,017 in 1890; and 1,828,697 in 1900. Capital, Montgomery.

Government.—The following were the State officers in 1902: Governor, William D. Kelks; Secretary of State, Robert P. McDavid; Auditor, Thomas L. Sowell; Treasurer, J. Craig Smith; Attorney-General, Charles G. Brown; Superintendent of Education, John W. Abercombie, who reigned to become president of the State University, and was succeeded July 1 by Harry C. Gunnels; Commissioner of Agriculture, Robert R. Poole; Adjutant-General, William B. Revson; State Examiner of Public Accounts, John T. Gorman; State Tax Commissioner, Harvey E. Jones; Railroad Commissioners, John V. Smith, W. C. Tunstall, A. E. Catron; President of the Board of Convict Inspectors, J. M. Carmichael; Director of the State Department of Archives and History,
United States of America. (Alabama.)

Thomas M. Owen, Agent for the Sale of Swamp Lands, W. M. Byrd; Chief Mine Inspector, J. de R. Hooper; Chief Justice of the Supreme Court, Thomas N. McClellan; Associate Justices, Jonathan Haralson, John K. Tyson, Henry A. Sharpe, James E. Dowdell; Clerk, Robert F. Ligon, Jr. All are Democrats.

By the terms of the new Constitution, which now goes into effect, the term of State officers is four years; and the Legislature will meet once in four years, on the second Tuesday in January; it will meet in 1903.

Financial.—The balance on hand in the treasury Oct. 1, 1901, was $501,350.24. The receipts to the close of business July 28 were $2,809,260.71; the disbursements, $2,407,448.04.

The revenue collected by the Tax Commissioner in 1901 from escaped taxes, taxes from undervaluations, and delinquent licenses, amounted to $155,573.69.

The valuation of the State for 1902 amounts in round numbers to $229,000,000, an increase of about $9,000,000. The taxable property in 1901 amounted to $284,622,937

The bonded debt, according to the report for 1901, was $407,600; in 1900 it was $444,680.

Poll-Taxes.—The law requires a poll-tax of $1.50 to be paid before Feb. 1. No provision is made for collecting it if delinquent; the penalty is the loss of the delinquent's vote. It is estimated that 90 per cent. of the negroes of voting age under forty-five have been disqualified by failure to pay the $1.50 poll-tax this year. The reduction of the white vote has been great. The total number of white males in Alabama of voting age is 232,294, and of these 139,000 are subject to poll-tax. Not less than 40,000 of them failed to pay the tax, and consequently are not qualified to vote. Persons who failed to pay the $1.50 poll-tax this year may restate themselves as electors next year by paying $3, and the next year by paying $4.50, and so on.

Education.—In the Annual Cyclopaedia for 1901 were given the figures of literacy of the voters of the State. Further census bulletins give the whole number of illiterates in the State as 443,690; and the percentage of persons between the ages of ten and fourteen who were able to read and write in 1900 as 71.11. This is an advance on the percentage for 1890, which was 64.50; but only two States—South Carolina and Louisiana—stand lower. These figures afford a measure of the efficiency of the public schools. The enrolment in the public schools in 1900 was 429,848; the average attendance was 158,976. The amount expended from the general school fund gave $1.42 per capita on the basis of the whole number of children of school age, and $2.75 per capita for those actually enrolled. This does not include the poll-tax or the funds appropriated by municipalities. In a table showing the average monthly wages paid to teachers in the various States, Alabama is credited with $32.04 to male teachers; 3 States standing lower; and $25.35 to female teachers, North and South Carolina alone showing a lower average.

The twentieth annual commencement of the Troy Normal College took place in May with a graduating class of 12.

The enrolment at the Alabama Polytechnic Institute, at Auburn, Oct. 18, was 400, the largest number ever in attendance at one time.

In April the Medical College at Alabama graduated a class of 12 in medicine and 1 in pharmacy.

The Agricultural and Mechanical College at Evergreen, began its fall term in September with 9 teachers and 113 pupils.

The following paragraphs are from the report of the principal of the Tuskegee Normal and Industrial Institute, Booker T. Washington:

"The number of students enrolled during the year covered by the report was 1,384, and the average attendance has been 1,218. These students have come from 30 States and Territories, and from 5 foreign countries. No one has been admitted under fourteen years of age; 1,357 of the whole number have boarded and slept on the grounds. The number which I have given does not include the pupils in the Children's House, which is a primary school for the children in the neighborhood, and at the same time serves as a model and training school for normal students.

"Neither does it include the 121 students in the night-school in town, nor the 18 students in the afternoon cooking-school in the town of Tuskegee; nor the thousands of colored men and women who are being reached and helped through the Tuskegee Negro Conferences. In all the departments, religious, academic, 112 teachers and instructors and assistants of various kinds have been employed.

"If we add the number of persons in the families of our instructors, the number of students, and teachers, it is safe to say that we have constantly upon or near our school-grounds a colony of 1,500 people. A large proportion of these families reside in some neat cottages owned by themselves or by the school, and the object-lesson they afford is most valuable to the students and to our people in this part of the State.

"Up to the present time there have grown out of the Tuskegee Institute at least 12 schools of considerable size—I mean institutions above the grades of common public schools. One of these, the Snow Hill Industrial Institute, at Snow Hill, Ala., has 300 students, 25 teachers, 14 buildings, and property valued at $3,000.

"Since my last report there have been received by our treasury from all sources and for all purposes $341,401.09. Of this amount $128,864.29 have been used for current expenses, $46,788 have been added to the permanent endowment fund, and $150,203.95 for the permanent improvement of the plant. The present indebtedness of the school is $5,887.52. The endowment fund amounts to $289,759.02.

"In regard to the training the report says: "Industry after industry has been added, as there was a natural demand for them, until at the present time the students receive training in 34 industries. You will be some idea of the volume of the industrial work accomplished by the students when I add that since my last report they have made 2,128,000 bricks alone."

"Soldiers' Home.—Land for a home for Confederate veterans has been given by J. M. Falkner at Mountain Creek, about 27 miles from Montgomery. Lumber and other materials have been given as well as money by various firms and individuals, and some of the smaller buildings are already ready erected. A plan has been adopted for marking the logs of the headquarters building with brass plates bearing the names of veterans, for each of whom $10 are paid to the fund for the home. A book of record will be kept, giving a biographical sketch of each veteran for whom a memorial log is named.

"Banks.—A bulletin issued in September by the Treasury Department, shows that 16 new national banks were established in Alabama in the period between March 14, 1901, and Aug. 31, 1902. These banks are the Agricultural School at Evergreen, with $35,000, each, and the other 10 more. The combined capital is $777,500.
UNITED STATES OF AMERICA (ALABAMA) 689

Convicts.—By the report of July 1 it was shown that there were then 1,666 State convicts, 478 under Federal contracts, and 390 were worked on the State farms or kept at the State prisons. The net profits from the department for the year ending Sept. 30 were $56,885.61. On Jan. 1, 1902, a new system in regard to the leasing of convict labor will go into operation. The conditions as regards the treatment of convicts by contractors have been much improved in the past two years. Some of these conditions were described in the Annual Cyclopedia for 1901. This year one of the inspecting physicians reported that the mines at Coalburg, where many were employed, were weapons until for the compulsory working of men. “On April 1, 1899, there were 559 convicts confined there. Between that time and April 1, 1902, 1,676 convicts have been received by the other 210. Of this number 100 have died, 87 from disease and 13 from accident and other causes.” After this report the contracting company removed the convicts to a better location, and the prisoners will be under the direct supervision of State officials.

At the Boys’ Industrial School, also known as the East Lake Reformatory, established in 1900, there are at present 174 boys in residence. The receipts for the year were $16,445.34, and the expenditures $15,813.23. Boys are employed in printing, shoe, and carpenter shops and on the farm; military drill is given and each boy has a half day’s work in school.

Crime.—The biennial report of the Attorney-General, which covers the two years ending Sept. 30, 1902, shows that 13,386 criminal cases were disposed of in Alabama in that period. The figures in the report show that 61 per cent. of these cases resulted in conviction. More cases against prisoners charged with carrying concealed weapons were disposed of than for any other offense. In the two years, 1,349 concealed weapon cases were disposed of.

Military.—The report of the Adjutant-General shows the strength of the National Guard to be nearly 3,000. There is 1 battalion of artillery with 3 batteries, 17 officers, and 171 enlisted men and non-commissioned officers; 1 squadron of cavalry, consisting of 12 officers and 187 non-commissioned officers and enlisted men; and 3 regiments of infantry with 153 officers and 2,187 men; there is also a complete hospital corps with 120 artists. Of the regiment that enlisted 2 negroes were seriously shot, 1 white man was fatally wounded, and another was missing and supposed to be dead.

Lawlessness.—Two “race riots” were reported this year, one at Jasper, March 26, the immediate occasion of which was the whipping of 2 negroes by white men on a charge of stealing. The other took place at Littleton, 25 miles from Birmingham, Oct. 19. It arose, according to the dispatch, from a white man being pushed from a railroad car by negroes. Of the eight that ensnared 2 negroes were seriously shot, 1 white man was fatally wounded, and another was missing and supposed to be dead.

A negro resisting arrest near Tuscaloosa, April 6, was shot by the negroes in the crowd and later died of his injuries. On the 9th, a negro was lynched near Troy, March 24, charged with assault on a little white girl. From testimony taken afterward it appeared that the charge was false, having originated with a woman who sought revenge on the negro for having given evidence against her in a suit for slander, and several alleged lynchers were arrested.

From testimony taken afterward it appeared that the charge was false, having originated with a woman who sought revenge on the negro for having given evidence against her in a suit for slander, and several alleged lynchers were arrested.
respectively 849,800 and 79,453 tons. The total shipments from the Southern field in the first half of the year aggregated 967,716 tons, of which 904,014 tons were pig-iron and steel and 83,702 tons were cast-iron pipe.

Labor.—A strike took place in the mines of the Tennessee Coal, Iron, and Railroad Company in the Birmingham district, involving about 4,500 men. It arose from the refusal of about 70 of the miners to allow the assessment for the anthracite strikers to be withheld from their wages. The company held that it could not collect the assessments against the protest of the men, and a strike was ordered Oct. 1. It was settled Oct. 15.

Mobile.—The celebration of the bicentennial of the founding of Mobile, the first capital of Louisiana, at Twenty-seven-Mile Bluff, on Mobile river, began Jan. 22 with a grand civic parade and the placing of a tablet in honor of the brothers Iberville and Bienville. The inscription on the bronze memorial tablet on the stone base of the colonnades supporting the portico of the county court-house is as follows: "1902. To the Glory of God. Erected in Honor of the Illustrious Brothers Bienville and Iberville, who Founded Mobile, the First Capital of Louisiana, 1702." The exercises of the second day were held at the site of Fort Louis de Mobile. On the site of the old fort the granite shaft unveiled bears this inscription: "Erected by the People of Mobile, Jan. 23, A. D. 1902, to Commemorate the Two Hundredth Anniversary of the Founding Home of Fort Louis de Mobile by Pierre Le moyne Sieur d'Iberville and Jean Baptiste Le moyne Sieur de Bienville."

Alexander City.—This little place of 1,500 inhabitants was practically destroyed by a fire in June, the loss reaching by estimate $750,000, which was not nearly covered by insurance.

Con Koperal Appropriations.—For improvement of waterways wholly or partly in Alabama, Congress made the following appropriations: Mobile harbor, $300,000; Alabama river, $20,000; Black Warrior, Warrior, and Tombigbee rivers, $20,000; Choctawatchee river, $16,000; Chattahoochee river, $100,000; Coosa river, $35,000. A survey was ordered to be made of the Coosa and Alabama rivers with a view to determining the practicability of securing a uniform 6-foot navigation in them and the probable expense; also the advisability of further prosecuting the present project for locks and dams in the Coosa and Alabama rivers.

The amount for the public buildings at Anniston was raised from $50,000 to $75,000; and that for the post-office and court-house at Montgomery from $185,456 to $250,456.

Political.—State officers were elected this year in November, the time of the State election having been changed. In view of the general demand in the Democratic party for the nomination of candidates for State offices by a general primary instead of by convention, the State Committee, at its meeting in July, ordered such a primary to be held on the 15th of November; the date was fixed at Aug. 25. If a second primary were necessary, it should be held Sept. 15; and if a third, Sept. 29. There had been some sentiment in favor of making it a general white primary, but the action of the committee limited the right to vote to white Democrats.

Gov. Jelks was a candidate for renomination, and opposed to him was ex-Gov. Johnston. The candidacy of Governor Russell M. Cunningham, Charles E. Waller; Secretary of State, J. Thomas Heflin, Frank N. Julian, J. L. Tanner; State Treasurer, J. Craig Smith; State Auditor, T. L. Sowell; Attorney-General, James E. Cobbs, Alex. M. Garber, Alex. Troy, Massey Wilson; Superintendent of Education, Thomas L. Bulger, ChapPELL Cory, John G. Harris, Isaac W. Hill; Commissioner of Agriculture, R. R. Poole.

At the primary, Aug. 25, Gov. Jelks received a majority of 25,746 out of a total of 89,236 votes polled. For the office of Attorney-General a second primary was needed to decide between Messrs. Garber and Wilson; and for Superintendent of Education Messrs. Harris and Hill also would have entered the second but not Mr. Harris withdrew. The ticket as finally fixed was: For Governor, William D. Jelks; Lieutenant-Governor, R. M. Cunningham; Secretary of State, J. Thomas Heflin; Treasurer, J. Craig Smith; Auditor, Thomas L. Sowell; Attorney-General, Massey Wilson; Superintendent of Education, Isaac W. Hill; Commissioner of Agriculture and Industries, R. R. Poole.

The State Executive Committee of the Republican party met in Birmingham Aug. 2 and called a convention to meet there Sept. 18 to nominate a ticket for the United States Senate. The action of the committee was the adoption of the following resolution:

Resolved, That only those shall be recognized and permitted to participate in the State and county conventions and be at meetings who are duly qualified voters under the new Constitution of Alabama.

The effect of this is to make the Republican party in Alabama a white man's party, as under the new Constitution of the State the negroes are practically all disfranchised.

No negro's name appeared upon the report of the Committee on Credentials for the convention, which was adopted, although on the list of delegates from more than one county there were names of negroes when the credentials were given to the subcommittee for action.

The platform of the convention as reported reaffirmed the Philadelphia platform, favored 'the organization of labor for its legitimate protection and the enactment of laws for the peaceable and fair settlement by arbitration of disagreements as they may arise between organized capital and labor,' "favorableness to securing uniform 6-foot navigation in them and the probable expense; also the advisability of further prosecuting the present project for locks and dams in the Coosa and Alabama rivers."
nation in 1904. The majority for adoption was large.

The ticket follows: For Governor, J. A. W. Smith; Lieutenant-Governor, Charles F. Lane; Attorney-General, H. Armbruster; Secretary of State, J. H. Karter; Auditor, T. B. McNair; Treasurer, H. Lee Brown; Superintendent of Education, J. C. Fosvile, Crenshaw County; Commissioner of Agriculture, I. B. Morton.

The Prohibitionists met Aug. 13 and adopted a platform in accordance with the party principles.
The ticket was: For Governor, W. D. Gay; Lieutenant-Governor, H. L. Martin; Secretary of State, T. D. Witherspoon; State Treasurer, R. O. Simpson; Commissioner of Agriculture and Industries, Dalney Palmer; State Auditor, C. D. Alverson; Superintendent of Education, O. E. Comstock; Attorney-General, W. W. Whiteside.

These names did not, however, appear on the official ticket filed by the Secretary of State.

At the election Gov. J’ska’s vote was 67,760, against 24,423 for Smith. The entire Democratic ticket was successful, including the candidates for Congress. The Legislature is almost entirely Democratic.

In May an organization called “the Colored Man’s Suffrage Association” was formed for the purpose of fighting the new Constitution of Alabama in the courts, and subscriptions were taken for a fund of $2,000 to be used for this purpose.

Steps had already been taken to test the suffrage provision by an action brought in the name of a negro who made affidavit that he was denied the right to register, though complying with all the qualifications exacted by the Constitution. He asserted that he was denied the right because he is a negro, and invokes the fourteenth and fifteenth amendments in support of his contention.

In December negroes from all parts of the State met at Selma to form a colored Republican party. Resolutions were adopted indorsing the action of President Roosevelt in not recognizing the “Lily White” branch of the party in Alabama. An address was issued to the negroes of the State, advising them to appeal to the Democrats to allow them to register.

ALASKA, a Territory of the United States, in the extreme northwestern part of the North American continent. It stretches from the United States in a treaty concluded March 30 and proclaimed June 20, 1867, in consideration of the payment of $7,200,000. The population in 1860 (each decennial census was 33,426 in 1880; 32,022 in 1890; and 63,592 whites, native born 21,709, foreign born 8,789; Indians, 29,538; negroes, 168; Chinese, 3,116; Japanese, 295) in 1900. Its area according to the census of 1900, is 900,844 square miles, including a strip, known as Southeast Alaska, 600 miles long, bounded south by Dixon Sound and Fortland Channel, and east by the summit line of the mountains parallel to the coast; and where such a line is at a greater distance than 10 marine leagues (34° statute miles), by a line drawn parallel to the windings of the coast, which shall never exceed 10 marine leagues therefrom. The position of the boundary of this southeastern extension is now a matter of dispute between Great Britain and the United States.

Government.—The temporary seat of Government is at Sitka, formerly the Russian capital. The following were the officials of the Territory in 1901: Governor, J. H. Karter; Postmaster General, William L. Distin; Surveyor-General, William L. Distin, Sitka; Register, John W. Dudley, Juneau; Receiver, T. M. Mullan, Juneau. Department of Agriculture—Special Agent, C. C. George, Sitka. Superintendents,—Fred. K. Rader, Sitka; H. P. Nielsen, Kenai; T. W. Neal, Copper Center. Bureau of Education.—Agent, Sheldon Jackson; Assistant Agent, William Hamilton; Superintendent of Schools, W. A. Kelly. Internal Revenue, John Cameron, Deputy Collector, Juneau.

Banking.—The only national bank in Alaska is the First National Bank of Juneau. Its condition at the close of business Dec. 10, 1901, was:

- Resources—loans and discounts, $45,524.20; United States bonds, $87,600; stocks, securities, etc., $7,390.08; banking-house, furniture, and fixtures, $4,480; due from national banks, $4,464.62; due from State banks and bankers, $9,046.43; due from reserve agents, $13,019.08; checks and other cash items, $10,100.33; total specie, $41,796.05; other resources, $10,119.81; total resources, $231,469.00.

- Liabilities—capital stock, $50,000; surplus and undivided profits, $2,841.98; national bank-notes outstanding, $4,370; dividends unpaid, $622.50; individual deposits, $99,669.12; United States deposits, $53,141.28; deposits of United States disbursing officers, $21,318.82; total liabilities, $231,469.00.

- Resources—loans and discounts, $45,524.20; United States bonds, $87,600; stocks, securities, etc., $7,390.08; banking-house, furniture, and fixtures, $4,480; due from national banks, $4,464.62; due from State banks and bankers, $9,046.43; due from reserve agents, $13,019.08; checks and other cash items, $10,100.33; total specie, $41,796.05; other resources, $10,119.81; total resources, $231,469.00.

Commerces and Navigation.—Alaska forms a single customs district of the United States, with Sitka as its port of entry. The following are classed as subclasses of entry: Dyes, Eagle City, Wrangell, Mary Island, Juneau, Sitka, Cook Inlet (Homer), Orca, St. Michael Island, Skagway, Unga, Karluk, Chichikana. In the fiscal year ending June 30, 1901, 15 sailing vessels, of 6,940 tons, and 266 steam-vessels of 191,664 tons, were entered by the district of Alaska, of which 7 sailing vessels, of 5,519 tons, and 179 steam-vessels, of 128,785 tons, were American; during the same period 153 sailing vessels, of 1,845 tons, and 261 steam-vessels, of 164,678 tons, were cleared, of which 1 sailing vessel, of 1,332 tons, and 149 steam-vessels, of 102,931 tons, were American. During the fiscal year ending June 30, 1902, 15 sailing vessels, of 5,870 tons, and 292 steam-vessels, of 188,471 tons, were entered, of which 9 sailing vessels, of 3,369 tons, and 180 steam-vessels, of 125,504 tons, were American; during the same period 11 sailing vessels, of 775 tons, and 226 steam-vessels, of 149,388 tons, were cleared, of which 3 sailing vessels, of 235 tons, and 131 steam-vessels, of 93,253 tons, were American.

The total values of exports for the fiscal year ending June 30, 1901, were gold, $1,900; merchandise, $2,534,318, of which $2,018,104 represents the value of domestic products and manufactures, and $516,214 of which foreign products and manufactures. The imports were: Gold (from British Columbia) $1,919,907; merchandise, $557,992. The total value of exports for the year ending June 30, 1902, were: Gold, $506,817; merchandise, $2,012,021, of which $2,537,325 represents the value of domestic products and manu-
The figures are for the foreign commerce alone, and do not include the values of merchandise shipped to and from the United States.

The total value of domestic merchandise imported into Alaska from the United States during the six months ended Dec. 30, 1902, was $3,318,079, and of foreign merchandise $4,771; the total value of imports from foreign countries was $307,963.

Of the exports to the United States during the same period, the value of foreign merchandise was $34,408, the value of domestic merchandise $9,775,193; of the exports to foreign countries, the value of foreign merchandise was $10,952,286, of domestic merchandise $1,236,463. The total values of gold and silver coin and bullion exported from Alaska to the United States during the same period were: Domestic $22,797,265, foreign $10,653,286; the total value of gold and silver imported from the United States was $109,863.

Manufactures.—The bulletin of manufactures of the United States Census of 1900 gives the following comparative statistics of manufactures for Alaska:

* Includes proprietors and firm members, with their salaries; not included for 1900.

Of 45 establishments reporting in 1900, using 1,902 horsepower, 1,078 was derived from 49 steam-engines, 597 from 14 water-wheels, and 287 from 11 electric motors. Of 9 establishments reporting in 1890, using 546 horsepower, 290 was derived from 7 steam-engines, and 161 from 3 water-wheels.

Mineral Resources.—The final estimate of the Director of the Mint, based upon the receipts at San Francisco, Seattle, and the Selby Refinery, places the total output of gold from Alaska for the ten months ended Nov. 1, 1902, at $18,870,075, of which quantity 4,000,000 came from the Nome district, and the remainder from the Yukon districts, the Canadian Klondike, and southeastern Alaska. This is more than $4,000,000 in excess of the Alaska output for the calendar year 1901, the figures for that year being $14,675,675. In the output for the ten months is included $250,000 expected to arrive from the Klondike before Jan. 1, and $1,300,000 expected from Nome.

The Seward peninsula continues to be the objective point for placer-mining, and with improved methods its phenomenal yield is increasing rather than diminishing, as was predicted for the Nome workings in their early days. New workings have been opened up in every direction and are yielding in paying quantities. The rich discoveries in the Forty-Mile district have attracted many miners from the Klondike country. The distributing point for this district is a new camp called Wickersham, after the judge of the district. Another is the estimate of the Governor the miners at the head waters of the Koyukuk river, a tributary to the Yukon from the northward, cleaned up $900,000 during the season. The new placer-mines in the vicinity of Rampart have shown rich deposits. Rampart offers especial advantages as a distributing point on account of its possibilities in agriculture and stock-raising. Good claims have been worked in the region north and south of the sixty-fourth parallel and immediately west of the one hundred and forty-first meridian. Here is a vast field for mining operations, but placer mining is too expensive for him to do much on an extensive scale. Placer discoveries of great importance have been found on tributaries of Copper river. Though on the Chitina river have been worked more than two years. The Nazina river, a branch of the Chittyna river which flows into the Copper from the east, has attracted marked attention. Mining is going on in the north part of Kenai peninsula, and a fairly prosperous season is reported. The Porcupine district, near the boundary-line up Chilkat river from Haines, has made a good showing. One hydraulic plant has been running several years in Silver Bow basin, near Juneau.

The chief production of gold from quartz-mines is in southeastern Alaska, where several companies operate large and expensive mines. For 1902 one of the great 300-stamp mills of the Alaska-Treadwell mine near Juneau being the largest of its kind in the world. The Treadwell Company operates four mills—1 with 300 stamps and one with 120 stamps, and the other with 100 stamps, while the Alaska Mexican Company operates one mill with 120 stamps.

Preliminary work has been begun near Juneau on one of the largest and longest mining tunnels in the world. The tunnel will be about 10,000 feet long and will extend from the beach south of Juneau into the mountains to tap claims in the Silver Bow basin.

Much interest has been manifested in the copper prospects of Alaska. There are large deposits of ore on Prince of Wales island, at Ilimar, on Prince William Sound, and on Lautseis island. A great deal is being taken out, and efforts are being made to invest capital in the exploitation of this industry.

Finds of cinnabar, platinum, tin, iron, and diamonds are also reported, and the extensive deposits of gypsum on Clearwater Bay, Chatham Straits, are receiving attention. Analysis shows it to be 98 per cent. pure and the vein is 75 feet wide, traceable on the surface 700 feet.

Coal of mid-oceanic quality is found in the Territory. Admiralty island has the most valuable field so far discovered. Important discoveries are reported to have been made in 1902 of large veins and fine quality on the mainland south of Kayak island. Kenai peninsula is nearly all coal land. There is coal on the Tanana, and in several places on the Yukon.

Oil has been discovered on the Comptrollers Bay, where a well has been driven several hundred feet, and there is a flow of a fine grade of oil. The field is large. Oil has also been found in the region around Lake Iliamna on the Alaska peninsula.

Fisherias.—The canning industry was represented in 1901 by 30 companies and individual packers, with 55 canneries and 12 salteries, canning 3,500,000,000 pounds of salmon. The plants were valued at $12,000,000; number of salmon taken, 1,900,000,000; output, 2,029,269 cases of 48-pound cases, or 18,942 barrels, in all about 1,000,000 pounds of salmon. The value of the salmon pack was estimated at $6,926,167. The total value of the catch of codfish in the same year amounted to less than $150,000. Some halibut was taken.
and there is a small trade in salted herring; but no figures are given. The purchase value of the salmon pack for 1902 was $7,300,000. Several hatcheries are in operation, and it is the desire of the cannery owners to cooperate with the Gov
erment in preserving the fish, but the hatcheries are mostly in the hands of men little skilled in such work, and hence not producing satisfactory results. The United States revenue-cutters Perry and Rush were in Alaskan waters during the season to enforce the fishery laws, and many complaints of violations were prosecuted. The Oil and Guano Company, at Kiliusnooo, has closed its first season and reports a ready market for its products.

The value of the products of the whale fishery brought into the United States from Alaska during the fiscal year ending June 30, 1901, was $61,147, of which $66,573 represents the value of 14,062 pounds of whalebone or baleen and $4,274 of other products.

Sealing.—The Pribilof Islands are the breeding-place of the fur-seals which inhabit the Paciﬁc Ocean. They were considered a part of Alaska and included in the cession by Russia. They were the breeding-place of the fur-seals when discovered by the Russians in 1786, and a Russian company was formed the purpose of taking the skins of these animals, and continued its operations up to the time of the transfer of the islands to the United States in 1867. In 1889 a contract was made with the North American Commercial Company, ﬁxing the rental of the lands at $60,000 and a tax upon each skin at $0.63$.

Under this lease, as construed by the Supreme Court of the United States, rental is now paid at the rate of 60 cents for each skin taken. The Governor of Alaska reports 19,000 seals taken on St. Paul and 3,204 on St. George island in 1902. At the contract price, with the rental, the total revenue would be $57,076.60.

In February, 1902, Collector J. W. Ivey issued orders to his deputy at Unalaska closing the port to Canadian vessels presumably engaged in violating the laws in regard to pelagic sealing, and forbidding the sale to them of supplies. His action did not meet with the approval of the Governor for 1902, upon the ground that he was removed from ofﬁce.

Timber.—In a proclamation dated Aug. 20, 1902, President Roosevelt set aside as the Alexander Archipelago, including the islands south of the Alexander Archipelago, including the islands south of the islands in southeastern Alaska known by that name. This new reservation, the ﬁrst in Alaska, embraces Prince of Wales island and the smaller islands seaward thereof, Zarembo, Kupreanof, and Kiuik islands, and Chichagof island and the smaller islands to the seaward thereof. The islands have not been surveyed and their exact area is unknown. They contain, according to Lieut. G. T. Emmons, who made a investigation of the forest resources of Alaska, the most valuable timber in Alaska. The reservation of the islands from settlement, entry, or sale by the Government is not to be construed to deprive any bona fide inhabitant of any valid right he may possess either under the Russian treaty of 1867 or under any act of Congress relating to Alaska. However, much dissatisfaction has been demonstrated, particularly by the miners of Prince of Wales island, and the Governor, in his report for 1902, urges great care in the admin
derstration of this reserve.

Agriculture.—Agricultural experiment stations were maintained during 1901 and 1902 at Seward, Cordova, Unalaska, and at Rampart, in the Yukon valley. In the investigations spe

United States of America (Alaska)
Birches, Fort Gibbon, to Rampart. (See Telegraph.)

The navy has a permanent marine post at Sitka and on Japonski Island, and the Bureau of Equipment and of Yards and Docks has built a wharf and coal sheds. Here also are a shell house and a powder magazine. The Marine-Hospital Service maintains a hospital at Dutch Harbor. In the fiscal year ended June 30, 1901, 11 patients were treated in the hospital and treatment was furnished 59 out-patients; in the year ended June 30, 1902, 12 patients were treated in the hospital, and there were 62 out-patients.

In 1902 the United States Revenue-Cutter Service had 6 boats in service about Alaska. The Bear was used in the transportation of reindeer from Siberia. The Thetis went to the relief of the Portland and Jeanie, which left Scott for Cape Nome in the latter part of April and were caught in the ice-pack and carried into the Arctic Ocean. They carried in their hold several hundred passengers and crews, hundreds of tons of mining machinery and provisions. They were caught in the pack June 4, and June 17 were saved by another Belvidere, the Thetis lying by, 80 miles north of Cape Prince of Wales in the Arctic Ocean. The 2 boats were locked in the ice, almost within speaking distance of each other, in imminent danger of being crushed. The provisions of both gave out and they were forced to break their cargoes. They finally succeeded in breaking out, and on July 1 reached Nome, in good condition.

The Manning was on patrol duty at the Seal Islands, and the Perry and the Rush inspected the canneries. The McCulloch surveyed for a harbor on one of the Aleutian chain west of Dutch Harbor. These vessels also provided transportation for the various court officers on their rounds.

The Lighthouse Service has hitherto been very incomplete. Alaska is not a distinct district of itself and is visited but once a year by the tenders Columbine and Manzanita. At present only 2 lighthouses are in operation, both in southeastern Alaska, and 5 others, 1 in Clarence Strait and another in Unimak pass, are nearing completion.

Telegraph.—Gen. Greeley, Chief Signal-Officer of the Army, announced the completion of the military telegraph-lines between Fort Egbert, Eagle City, and Fort Lisburne, near Valdez. This line brings in direct telegraphic communication with the rest of the world the Copper river country and the Alaskan coast along Prince William Sound. The telegraphic outlet from Fort Egbert is by a signal-corps wire, connecting the Canadian Telegraph line at the international boundary, whence a wire stretches through Dawson to Ashcroft, on the Canadian Pacific Railway. The line from Fort Egbert to Fort Lisburne, 425 miles long, was built by almost inconceivable effort and hardship through an uninhabited country, along rough and almost impassable trails. All wire, insulators, and other line material, as well as food for men and forage for animals, were either dragged hundreds of miles by sleds in midwinter or carried by pack on the backs of men.

Education.—The educational work of Alaska is under the direct supervision of the Rev. Sheldon Jackson, D. D., the United States General Agent for Education for Alaska. The following table shows the number of children attending schools, the race under instruction, and the total enrollment and average monthly attendance for the school year extending from September, 1900, to May, 1901:

| SCHOOL | ENROLLMENT | AVERAGE ATTENDANCE-

The small average attendance was due to two epidemics—measles and smallpox in southeastern Alaska—that caused much sickness and a great many deaths, particularly among the natives.

The appropriation for 1900-01 was $30,000, and was disbursed as follows: Salaries of officials, $4,865; salaries of teachers, $18,392.38; supplies, $4,542.36; fuel and lighting, $889.05; repairs, $521.41; rent, $570; traveling expenses, $546.25; freight, $34.95; balance, $48.60. The expense per capita of enrollment was $17.78.

In addition to the schools established by the United States Bureau, most of the missions to Alaska maintain schools teaching general and industrial branches.

The Sitka Training-School reports as follows: "Pupils—boarding, 150; day, 5; teachers, 15; salaries, $6,940.91; current expenses, $7,995.89; repairs, etc., $907.03; total, $15,930.83. Tuition received, $605.75." The Sitka Hospital reports as follows: "Physician in charge and 2 nurses. More than 1,500 patients have been treated in the hospital and at the ranches, and a large number of successful operations have been performed. Smallpox was epidemic, and physicians, nurses, and teachers acted heroically in caring for the sufferers." Following is the report upon education in Alaska for the year ending June 30, 1902, from the annual statement of the United States Commissioner of Education, embodying the terms and some of the practical workings of the new provision for educational funds, which superseded the regular annual appropriation for public schools in March, 1901: "The bureau has maintained the past year, outside of incorporated towns, 27 public schools, with 33 teachers and an enrollment of 1,741 pupils..." An Act making further provision for a civil government for Alaska, and for other purposes," approved June 6, 1900, section 460, chapter xlv, Part II (31 Stat. L. 330), provides a tax on business and trade in the form of a license at the public schools, but Part V, said act, provision is made whereby 50 per cent. of said license money collected in incor-
porated towns shall be turned over to the treasury of said towns for school purposes. By an
amendment to the above section 203, approved March 3, 1901, it was provided that 50 per cent.
of all license moneys that may hereafter be paid for business carried on outside incorporated
towns in the district of Alaska shall be set aside to be expended, within the discretion and under
the direction of the Secretary of the Interior, for school purposes outside incorporated towns in
said district."

Under the provision of the license law there has been received from March 3, 1901, to June
30, 1902, for education in Alaska, outside of incorporated towns, $35,882.41. This fund was dis-
bursed as follows: Salaries of officials, $6,066.12; salaries of teachers, $17,192.64; supplies, $2,432.64;
fuel and lighting, $905.40; repairs, $204.53; rent, $369.85; traveling expenses, $201.40; freight,
$27.24; balance, $9,404.69.

Expenditure. The appropriations for the intro-
duction of domestic reindeer into Alaska were in 1901 and 1902 $25,000 for each year. The expendi-
tures were, in 1901: Salaries, $10,430.57; supplies from government stock, $2,020.57; the revenue-cutter
Bear, $2,202.57; for 429 deer, $6,617.50; other expenses, $4,017.53; balance, $7.13. In 1902: Sal-
aries, $2,310.05; supplies, $4,495.44; transportation, $2,000, which was paid for in coin instead of barter goods as formerly. When the revenue-cutter Bear reached Barones Korgif
Bay the natives had large herds to sell; but when they learned that the reindeer were carried no flour,
ical, tobacco, or other things for which they were accustomed to trade, never having had any
money in circulation and being unacquainted with its value, they refused to sell, and only 30
deer were secured.

The Nome Conspiracy.—Jan. 6, 1902, the United States Circuit Court of Appeals, in San
Francisco, fined Judge Arthur H. Noyes, of the Second District of Alaska, $1,000 for contempt of
court, and sentenced District-Attorney Joseph K. Wood and his assistant, C. A. A. Frost, to four
months and one year imprisonment respectively. While the case was tried solely on the charge of
contempt, the defendants having refused to an-
swer the mandates of the court, it was the out-
growth of the conspiracy entered into by Judge
Noyes, Alexander McKenzie (who was convicted
in February, 1901), and others in Nome in the
summer of 1900, where, by the appointment of
McKenzie as receiver, they took over all the most
valuable mining-claims in Nome, and refused to restore them or to respect the injunctions of the
higher court. Upon the findings of Attorney-
General Knox, Feb. 23, 1902, after examining the
charges, President Roosevelt dismissed Judge
Noyes from office Feb. 25, 1902.

ARIZONA, a Territory of the United States, organized Feb. 14, 1883; area, 113,030 square miles. The population, according to each decen-
nial census since the organization, was 9,658 in 1870; 40,440 in 1880; 59,020 in 1890; and 122,931
in 1900. Capital, Phoenix.

Government.—The following were the Terri-
torial officers in 1902: Governor, N. O. Murphy, succeeded in July by Alexander O. Brodie; Secre-
tary, Isaac T. Stoddard; Auditor, William E. Nichols; Treasurer, T. W. Pemberton, resigned
and succeeded in August by I. M. Christie; Attorney-
General, C. A. Ainsworth, resigned and suc-
ceded in August by E. W. Wells; Adjutant-Gen-
eral, H. F. Robinson; Superintendent of Educa-
tion, R. L. Long, resigned in July, succeeded by
Nelson G. Layton; Geologist, W. P. Blake; Survey-
OR-GENERAL, Hugh H. Price; Veterinarian, J. C. Norton; Chairman of Livestock Survey, A. C. McQueen; Surgeon-General, M. M. Walker;
Board of Equalization, R. N. Fredericks, Michael
Ohi, M. F. Freeman, resigned and succeeded by
Frank H. Parke; Game Commission, W. L. Pinney, T. S. Bunch, Eugene Allison; Chief Justice of the Supreme Court, Webster Street, succeeded March 18, 1901. The associate justices are: Richard E. Sloan, Fletcher M. Doan, George R. Davis; Clerk, Lloyd Johnston, succeeded by Shelby M. Collum.

The Territorial Legislature meets biennially in January of the odd-numbered years; the session is limited to sixty days. The Council has 12 members and the House 21.

Finance.—The biennial report of the Auditor for 1901-'02 shows that Territorial warrants have been drawn to the amount of $385,521.00, and that the floating indebtedness of the Territory is now $119,859. The total valuation of the taxable property of the Territory is $30,083,177.57, an increase of $229,343 over the valuation of 1901. The rate of taxation, which was 1.17 that year, was reduced in 1902 to 1.1 and a fraction. The counties pay on their indebtedness annual interest aggregating a little more than $65,000.

Books for $30,000 were issued this year for the purpose of making a Territorial exhibit at the St. Louis Exposition. Territorial bonds were redeemed as follows: Insane asylum 7 per cent., $50,000; University, 7 per cent., $7,000. The net indebtedness of the Territory is $1,065,461.90, a decrease of $5,388.17.

Education.—The census reports show the number of illiterates in the Territory to be 27,307. The percentage of persons between ten and fourteen years of age able to read and write was 70.92 in 1890 and 77.79 in 1900. The number of inhabitants that speak no English was 5,388.17.

There are about 23,000 children of school age; the average expenditure for each is $15.11.

A class of 18 was graduated at the Tempe Normal School in June. A girl's dormitory is in process of construction, to cost, with its furnishings, $12,000.

Last winter the State Board of Education of California, upon examination of the quantity and quality of the Tempe Normal School, officially recognized the latter as a par with their own normal schools.

The university graduated 3 women in the literary course and 3 men in the department of mining engineering. All the men in the institutions are taking either this course for a degree or the shorter course in mining and assay.

Banks and Loan Associations.—The report of the Bank Examiner at the close of the year shows that there were 16 incorporated Territorial banks, 6 building and loan associations organized under the laws of the Territory, and 7 national banks. Some of the Territorial banks since the matter for the report was gathered have been converted into national banks. Great gains are shown in the business of both the Territorial banks and the building and loan associations.

The resources of the former have increased within a year from $3,018,806 to $4,675,032.33. The operations of the building and loan associations have been increased from $588,369.45 to $701,472.09. The increase of deposits in banks, both Territorial and national, have been for the last two years: for 1900, $40,025,886.97; for 1902, $7,015,087.98. Of the total increase of $780,607.12, $632,390.07 has been in Territorial banks and $157,217.05 in national banks.

The railroad tracks aggregating 83.04 miles were laid in the Territory. The Santa Féd, Prescott and Phoenix has been improved by the construction of what is known as the Hell Cañon Cut-Off. It is shorter than the old line by 3 miles; the grade is 14 per cent., against 3 per cent. on the old line. The most notable feature of the Hell Cañon Cut-Off is that of the Hell Cañon viaduct, crossing a deep cañon, which, to the time this improvement was conceived, was considered practically impassable. The viaduct is a fine steel structure, 643 feet in length, and crosses the cañon at an elevation of 190 feet.

The total railroad and Pullman car valuations this year amounted to $4,998,434.32. This is an increase over the valuation last year of $175,405.41, which, however, did not include the El Paso and Southwestern.

Corrections.—About 300 convicts are confined in the Territorial prison at Yuma. No satisfactory solution of the convict labor problem has yet been found.

A reform school for boys and girls has been built near Benson, with grounds comprising 40 acres. It is of tuff, has 20 rooms, and cost $25,000. It will be ready for occupancy after the next session of the Legislature.

Irrigation.—The greater part of the irrigated land of the Territory is in the Salt river valley. The total expanse of the fully irrigated land in Arizona is 185,390 acres. In the past ten years 545 miles of canals have been constructed, at a cost of $1,500,000. Artesian water is used to a limited extent in the San Pedro and Gila valleys, near Benson and Safford. A new corporation has acquired the Peoria Canal property, near Gila Bend, on which $1,000,000 has been spent. The dam is to be rebuilt and about 80,000 acres of good land reclaimed. The Government has spent $13,000 for new ditches on the Pima Indian reservation.

Around Yuma the main interest concerns the Imperial Canal, which heads near by, on the California side of Colorado river. The new Rockland Canal, north of Yuma, will irrigate 10,000 acres. About 100 horse-power will be developed on the Rudy Canal, west of Yuma, to be used in pumping water to higher line lands.

An organization company, with a capital of $1,000,000, has been formed with the object of securing the construction of the proposed Tonto creek storage dam on Salt river, near Phoeniz, under the general irrigation act of Congress. The dam was to be 210 feet high. The total investment is estimated at $2,000,000, and it is to impound 840,000 acre feet of water. The engineers are considering plans for building the dam 40 feet higher, impounding 1,400,000 acre feet of water.

The unique feature of the whole enterprise is the scheme for development of electric power. A canal will be dug, heading at the upper end of the reservoir site, capable of carrying the minimum flow of the river. This force will be utilized in generating electric power to be used in making the necessary cement from materials close at hand, for running all the huge construction machinery that will be used in the building of the dam and in the operation of the head-gates, and later, when all is finished, it will be cabled to the valley and employed in raising the underground supply.

Products and Industries.—Arizona has 314 manufacturing establishments with a capital of $4,229,450.84, and for 1902, $7,015,087.98. Of the total increase of $780,607.12, $632,390.07 has been in Territorial banks and $157,217.05 in national banks.

In 1901, 1902 includes operating 83.04 miles of railroad.
the copper-mines; Arizona stands third in the production of copper, only Michigan and Montana standing above it. Since the great decline in the value of silver and the shutting down of the Tombstone mines, the production of the white metal in the Territory has decreased, until now it represents only about 6 per cent. of the total mineral output, even the gold production being three times as great. As a result of this decline, it appears that the gold product in 1901 amounted to $4,083,000 in value, and the silver to $1,087,440. The greatest mining center of the Territory is Bisbee, near the Mexican line.

A scheme has been formed to mine or quarry the ice in the caves near Flagstaff. The main, or best-known ice-cave, lies at the head of Clark's valley, 17 miles southwest of Flagstaff.

The culture of date-palms has been undertaken at the experiment station south of Tempe. Trees imported two years ago are doing well, and another load from Egypt was received at the station this year.

Lands.—The court that had the disposition of private land claims passed upon 18. The total area authorized was 11,326,108.04 acres; the total confirmed, 121,187.50; the total rejected, 11,204.920.54. Among those rejected was the famous Peralta grant, amounting to 10,407,466.18 acres.

The United States Geological Survey is examining the forest reserves. The total area of the San Francisco mountain reserve is 785,360 acres. The Black Rock reserve comprises 1,826,380 acres.

Political.—The candidates for the office of delegate in Congress at the November election were Robert E. Morrison, Republican, and J. F. Wilson, Democrat. Wilson was elected by a vote of 9,170 to 9,259 for Morrison.

ARKANSAS, a Southern State, admitted to the Union June 15, 1836; area, 53,850 square miles. The population, according to each decennial census since admission, was 97,774 in 1840; 200,987 in 1850; 435,450 in 1860; 484,471 in 1870; 502,525 in 1880; 1,128,179 in 1890; and 1,311,564 in 1900. Capital, Little Rock.

The following were the State officers in 1902: Governor, Jefferson Davis; Secretary of State, John W. Crockett; Auditor, T. C. Monroe; Treasurer, R. C. Tipton; Attorney-General, Mammoth Murray; Comptroller, J. W. Colquitt; Superintendent of Education, J. J. Doyme, succeeded by J. H. Hinemon; Commissioner of Mines, Manufactures, and Agriculture, Frank Hill, succeeded by W. W. Bradford; Railroad Commissioners, Jeremiah G. Wallace, Felix M. Hanley, Abner Gaines; Adjutant-General, Charles Jacobson; Geologist, John C. Branner; Chief Justice of the Supreme Court, Henry G. Bunn; Associate Justices, Simon P. Hughes, Carroll D. Wood, Burrill B. Battle, James E. Riddle; Clerk, P. D. English. All are Democrats.

State officers are elected on the first Monday in September in the even-numbered years, and serve two years. The Legislature meets biennially the second Monday in January in the odd-numbered years. The session is limited to sixty days.

Finances.—The report of the Auditor for the two years ending Sept. 30, 1902, says: "The public debt of the State has been reduced to a minimum, and will very soon be wiped out entirely, with the exception of the funding bonds held by the permanent school fund, amounting to $1,118,500. Exclusive of these bonds, the present indebtedness of the State is $57,200 of the funding bonds of 1891, of which sum $102,500 is in the permanent endowment fund of the University of Arkansas, and the remainder, 35 bonds of $1,000 each, is held by private individuals. These bonds are being gradually retired. The act approved May 3, 1901, calling in for redemption the old outstanding bonds, provided that all such bonds not called within six months from the date of call made by the Treasurer should be forever barred, null and void. Of the 22 bonds shown by the records to be outstanding, only 7 were presented to the Treasurer. The Auditor estimates the ordinary expenses of the State government for the next two years at about $1,000,000. The total value of property in the State, as assessed for taxation, is about $224,000,000.

Education.—From the census reports on illiteracy in the State it appears that Arkansas has 190,665 illiterates. The percentage of persons from ten to fourteen years of age who were reported able to read and write was 77.80 in 1890 and 83.80 in 1900. Eighty of the States and Territories were below Arkansas in the list in 1890, and nine in 1900.

The school population this year was 495,368; the State apportionment of funds was $539,351.12, giving a per capita of $1.06. The monthly salary paid to male teachers is given as averaging $38.50; to female, $36.50.

The State University graduated a class of 22, June 19. In the medical department 11 were graduated in April. At the opening in September about 500 students were enrolled. The university ships were destroyed by fire in the autumn, at a loss variously estimated at $20,000 to $30,000, without insurance.

Charities and Corrections.—A report of the Lunatic Asylum, submitted in July, covers the period from Dec. 1, 1900, to July 1, 1902. The number Dec. 1, 1900, was 62; admitted, 235; discharged, 213, of whom 88 had recovered, 67 improved, 10 unimproved, 2 eloped, 2 were found not to be insane, and 61 died, leaving 644 remaining. The average cost of maintenance per capita for a month was $4.49, officers and employees included.

At the School for the Blind there were 169 inmates March 31. The cost of maintenance for one month was $4.40 per capita, including teachers and employees, 235 in all. Four students were graduated in June.

There were 298 pupils remaining at the Deaf-Mute Institute April 30. The average for sus-tenance for one month when the whole number, including employees, was 294, was $4.12. New buildings have been completed for both the Blind and Deaf-Mute Institutes.

At a meeting of the Penitentiary Board in November it was decided to buy a plantation in Lincoln County for a convict farm. It comprises about 11,000 acres, of which 2,400 are in cultivation. It is 28 miles below Pine Bluff, at a bend of Arkansas river, and has 7 miles of river front. The price was $140,000. The Governor was the only member of the board opposed to the purchase; he announced that he would send a message to the Legislature advising that it be canceled.

Militia.—In a report to the adjutant-general of the United States army in June it was stated: "1,604 militia have been regularly organized, uniformed, and in actual service of the State during the year ending June 30, 1902; that the average attendance at drills and parades during the year was, to the best of our knowledge and belief, on an average semimonthly for the 25 companies of infantry, monthly for the 2 companies of cavalry." The Government allotment to the State for militia supplies was $42,000. In Novem-
The capital in grist and flour mills in 1900 was 
$1,183,052; the value of the product, $3,708,109.
The number of farms in the State in 1900 was 
178,094; the value, $1,35,182,170; total value of 
farm property, $1,31,416,001; number engaged in 
agriculture, 340,904; farm-products, $79,049,490.
The estimate of the average yield of corn to 
the acre in 1902 was 20.2; in 1901 it was 8.1; the 
mean of the average of the past ten years was 
17.3.
The cotton-crop of 1902—02, according to Sec- 
retary Hester's report, was 820,000 bales, against 
762,000 the year next preceding. The consump- 
tion in mills of the State was 2,463 bales. The 
whole number of spindles was 14,588; number of 
looms, 150; of mills, 4.
The cotton-seed product was 190,015 tons; the 
cost, $2,245,710; the products, $3,188,512.
The number of commercial failures in the State 
the first half of the year was given as 162, with 
liabilities of $78,389. In the corresponding 
months of 1901 there were 116, with liabilities of 
$81,009.
Early in the year measures were taken to col- 
clect relief for the sufferers by the drought in the 
northern part of the State in 1901.

Court Decisions.—The Supreme Court has sus- 
tained the act of the Legislature of 1901 author- 
izing cities of the first class to pass vehicle tax 
ordinances. The tax was resisted on the ground 
that it was not constitutional and void “in this, 
that it is either an attempt by the Legislature to 
authorize said cities to impose or levy a direct 
tax upon wheeled vehicles as property, in excess of 
the amount limited by the Constitution and in 
violation of its provisions relating to taxation, or is 
an attempt to create outside of the common right 
to use vehicles a privilege and therupon to tax the 
same.”

The act “to suppress the illegal sale of liquors, 
and to destroy the same when found in prohibit- 
ed districts” was attacked, but was pronounced 
constitutional by the Supreme Court.

Hot Springs.—In the annual report of the 
Secretary of the Interior much attention is given 
to the Hot Springs reservation. It says in part 
“The success of the Hot Springs as a health re- 
sort since the assumption of supervisory control 
by the Government in 1878 has been remarkable 
The increase in patronage has been constant year 
by year. During this period of twenty-four years 
The superintendent estimates that a total of 550, 
000 people have visited Hot Springs for health and 
recreation; the patronage of the year just ended 
was 66,000.

The reservations, including the mountainous 
districts known as North mountain, Sugar Loaf 
mountain, and West mountain, together with 
Hot Springs mountain, were forever reserved from 
sale and dedicated to public use as parks. The 
reservations, with Whittington Avenue reserve, 
comprise in all 911.63 acres.

Little Rock—The local chapter of the Daugh- 
ters of the Confederacy last winter entered an 
emphatic protest against any presentation of the 
play Uncle Tom's Cabin in the capital city.

Pardons.—The Governor, having been in- 
duced to grant a pardon for remission of a fine by a 
petition on which, as was afterward found, about 
100 names were forged, including those of the 
sheriff, the clerk, and the prosecuting attorney, 
issued a proclamation directing that in future 
“the applicant or his attorney shall deposit peti- 
tion for pardon with the circuit clerk of his 
county fifteen days, subject to the inspection of the 
general public.

The Governor gained considerable notoriety in
May by granting a pardon to a negro convict in the Penitentiary on condition that he should become a resident of Massachusetts within thirty days. The negro had been convicted in 1860 of assault with intent to kill, and sentenced to three years in the prison.

LAWLESSNESS.—Lynchings have been reported this year at or near Foreman, Tomberlin, Magnolia, Stephens, and Forest City. All the negroes lynched were accused of assaults upon women or girls; one, who murdered his victim, was burned at the stake.

In October a company of the State militia was called out to aid the sheriff to keep order at El Dorado, where great excitement had been caused by a tragic affair in which 3 men were killed and 3 wounded, 1 fatally. The fight was the culmination of a feud arising from the shooting of a man by an officer whom he attacked for having arrested him.

Political.—The Democratic primaries for the choice of candidates for United States Senator, members of Congress, and State and local officials were held March 29. The candidates for the offices at large were ex-Gov. James P. Clarke and Senator James K. Jones; for Governor, Jefferson Davis and E. W. Rector. Clarke and Davis were chosen by large majorities, with 26,227 and 26,298, respectively. The resolutions recognized the Kansas City platform "as the declaration of the national Democracy upon national questions until supplanted by action at the next national convention; denounced the trusts and the Dingley tariff; favored the building of the Nicaragua Canal by the Government; an appropriation for the Louisiana Purchase Exposition; laws for protection of labor; a new State House; enlargement of the powers of the Railroad Commission and of the Interstate Commerce Commission; the establishment of a reform school; and better provision for the insane. Following is the ticket: For United States Senator, James P. Clarke; Governor, Jefferson Davis; Secretary of State, J. W. Crockett; Attorney-General, George W. Murphy; State Treasurer, H. C. Tipton; Superintendent of Public Instruction, J. H. Hinemon; Auditor, T. C. Monroe; Associate Justices Supreme Court, B. B. Banfield and C. E. Conley; Railroad Commissioners, J. W. Phillips, B. B. Huddins, J. E. Hampton; Commissioner of Mines, Manufactures, and Agriculture, H. T. Bradford. They were designated into two factions, known as the "regulars" and the "insurgents." Both held conventions at Little Rock, June 26. The "regulars" nominated Harry H. Myers for Governor. Other nominations were: For Secretary of State, Charles T. Duke; Auditor, John L. Smith; Treasurer, Joseph Berger; Attorney-General, Charles F. Cole; Land Commissioner, W. H. Conine; Superintendent of Public Instruction, Robert L. Floyd; Commissioner of Mines, Manufactures, and Agriculture, F. S. Baker; Associate Justice of the Supreme Court, Charles C. Watera. The resolutions condemned the national policy of the party at some length. On State affairs they favored an exhibit at St. Louis, equal taxation, and salaries for justices of the peace and prosecuting attorneys. The Democratic party was condemned for its failure to suppress trusts, to invite industries into the State by providing for them reasonable exemp- tion from taxation. The resolutions condemned the work upon the new Statehouse, after its site had been chosen, the foundation laid, and thousands of dollars of the public money laid out thereon; for its partisan man- agement of the State charitable boards in restricting their membership wholly to the Democratic party; for its partisanship applied even to the public schools, by which none but Democrats need aspire to the responsible position of school director; for its failure to provide a railroad com- mission which affords any protection to the peo- ple of the State; for failure to establish a reformatory school, to provide nearly an institute insane outside the county jails, and to pass an efficient fel- low-servant law; for "its vacillating and corrupt management of the State Penitentiary, by which monopolies are fostered, first, by entering into contracts for hiring out convicts at prices totally inadequate, and then seeking to dishonestly re- pudiating the contracts; and for its repeated re- fusal to change the law so that the minority party might have one judge and one clerk of its choice at each voting precinct in the State, thereby insuring an honest return of all the votes cast." Payment of the poll-tax was made a prerequisite to voting in the Republican primaries.

The "insurgents" nominated Charles D. Greaves for Governor. No nominations were made for other offices. The most distinctive among the resolutions: "The control of these State organizations has been in the hands of a member of the national Republican Committee for the past success in local or other elections in this State, but for the sole control of federal patronage and the aggravation of the few in control. We earnestly request that the President and his Cabinet officers refuse to recognize such organizations, which have so unworthily represented the Republican party of this State."

The Prohibitionists assembled in convention at Little Rock, June 25, nominated George H. Kimball for Governor, and adopted a platform in accordance with their principles. The concluding declaration was: "We declare our belief that existing conditions in other political parties in this State make it impossible that self-respecting citizens, and particularly Christian men, should continue to support them and the men and measures for which they ask the votes of the people."

The Ex-Slaves Association nominated Rev. R. D. Campbell, their president, for Governor; but the nomination was contested by the State ballot. The State election, held Nov. 1, resulted in the success of the Democratic candidates. The vote for Governor stood: Jefferson Davis, Demo- crats, 77,354; H. H. Myers, Republican, 29,256; C. D. Greaves, Independent, 8,345; George H. Kimball, Prohibitionist, 4,799.

A proposed amendment to the Constitution empowering the Legislature to place its members on a salary instead of the per diem system now in vogue was carried by a majority of 1,616 votes. The law now in effect gives the members of the Legislature $2 per day and their railroad mileage. The constitutional limit of the Legislature is sixty days, but for many years past the sessions have been prolonged to double that time. The question of license was voted upon, about 46 of the 75 counties giving a majority against. The State Senate will be entirely Democratic; the House will have 2 Republicans.
Lieutenant-Governor, Jacob H. Neff; Secretary of State, Charles F. Curry; Comptroller, Edward P. Colgan; Treasurer, Truman Reeves; Attorney-General, William H. Beldin; Governor, Hiram J. Wright; Superintendent of Public Instruction, Thomas J. Kirk; Superintendent of State Printing-Office, Alfred J. Johnston; Adjutant-General, W. H. Scovil; Insurance Commissioner, E. Myron Wolf; Commissioner of Labor, F. V. Meyers; Railroad Commissioners, E. B. Edson, C. S. Laumeister, N. Blackstock; Board of Equalization, Alexander Brown, R. H. Beamer, Thomas O. Toland, Lewis H. Brown; Commissioners of the Supreme Court, Wheaton A. Gray, James A. Cooper, N. P. Chipman, George H. Smith, and John Haynes; Building and Loan Commissioner, Frank H. Gould; Bank Commissioners, John Markley, A. W. Barrett, B. D. Murphy; Chief Justice of the Supreme Court, William H. Beatty; Associate Justices, T. B. McFarland, C. H. Garoutte, R. C. Harrison, Walter Van Dyke, F. W. Henshaw, Jackson Temple (who died Dec. 23); Clerk, George W. Root.

The State officers hold office four years and are elected in November of the even-numbered years between presidential elections. The Legislature meets biennially in January of odd-numbered years, and the session is limited to sixty days.

Valuations.—The assessed valuations of property in the State, as given in the Comptroller's official report for this year, amount to $1,296,750,465, made up as follows: Value of real estate, $600,974,783; improvements, $284,226,533; personal property, $200,164,171; money and solvent credits, $30,000,000; railroad issues, $12,907,003. The rate of State taxation is .382 cents on each $100 of valuation.

The original assessed value of mortgages is $1,415,521,044 and the assessed value of university and other State mortgages is $1,424,513. The total indebtedness of the counties of the State is $3,175,942,75, of which $3,085,900 is funded and $87,042,75 is transient or floating debt.

The aggregate valuation shows a gain of $49,044,662 over the preceding year and $18,081,339 of this increase is represented in the enhanced value of industrial and commercial improvements. The next greatest gain is in the assessed value of railroads, which is $15,691,118 greater than for 1901. Money and solvent credits show an increase of $40,000,000 and railroad issues are reduced $8,820,000 less in amount than for the previous year. The indebtedness of the counties was reduced $157,290,25 during the year, while the total funded debts of the counties was decreased by $135,500. Of the 57 counties in the State, 16 are free of debt, 11 have debts under $20,000 and only 11 owe in excess of $100,000. The largest single county debt is $410,335, owed by Sacramento County, and the smallest is $2,000, owed by Del Norte, and the same amount is owing by Ventura. The total outstanding debt of San Francisco city and county is only $290,000. Although the outstanding financial obligations of the counties show substantial reductions, there has been no backwardness in public improvements.

Education.—The State has two great universities, the Leland Stanford Junior University, at Palo Alto, Santa Clara County, the wealthiest institution of learning on the continent, and the University of California, at Berkeley, Alameda County. This year the magnificent memorial chapel at the Stanford University was completed, at an expense of over $300,000. California has built or got under way institutions to match the other college buildings in the great quadrangle, and is

considered one of the most ornate pieces of architecture, as well as one of the handsomest houses of worship, on the Pacific coast. It is presided over by the Rt. Rev. Dr. F. R. Rail, M.A., D.D., Bishop of California and former Bishop of New York city, and the regular Sunday and weekly services are undenominational. The attendance at the university was more than 1,500 during the year, about twice that number have been in attendance at the University of California at Berkeley. Among the other institutions may be mentioned California College (Baptist), at Highland Park, Oakland; University of the Pacific (Methodist), at San José; Mills Seminary, at Seminary Park, Alameda County; Wilmerding School and the Cogwell Polytechnic School, both at San Francisco; Santa Clara College, at Santa Clara. The elegant country mansion of the late James C. Flood, with extensive grounds and conservatories, at Menlo Park, San Mateo County; the Mark Hopkins Institute of Art, in San Francisco; the recently completed affiliated colleges near Golden Gate Park, San Francisco, and the Lick Observatory on Mount Hamilton, near San José, are all part of the property of and under control of the University of California.

Mining.—Although mining was less prominent in the industrial activities of the State during the last decade, the annual output of precious metals and minerals is still very large. In 1902 the production of gold amounted to $17,124,841, and since the discovery of the metal at Sutter's Mill in January, 1849, the State has contributed more than $1,500,000,000 to the golden wealth of the world. For value of output, California stands second among the States of the Union. The commercial value of the precious metals and minerals in 1902 is recorded at $480,793. Much activity in prospecting for copper is evident in Siskiyou, Trinity, Fresno, Santa Clara, San Luis Obispo, San Bernardino, and other counties. A discovery of a large and rich body of copper ore was recently reported from the neighborhood of the Almaden quicksilver-mine in Santa Clara County, and although the development now in progress has not yet been advanced to fully determine the value of the deposit, it is known to be very extensive and of a high grade. The copper-producing era in California began to assume large proportions and important dimensions in 1873, when the output was 13,638,828 pounds, valued at $1,540,666. No satisfactory estimates can be found at the present writing of the volume and value of the copper production of 1902. The operations of the chief producer, the Mountain Copper Company, in Shasta County, have been twice disturbed during the year, once by fire and lately by labor troubles. The output of the Butte Hill mine has been large and has made its mark in helping to swell the production of the year, which those best informed assert to be fully $7,000,000 in value. California is the only State that produces asphalt, and the output for 1902 is 26,000 tons, valued at $385,000. There are about 50 varieties of metals and minerals in the State of commercial value, all of which are being profitably worked.

Fuel Oil.—Crude oil is coming rapidly to the front as a leading product of the State, and it is now being utilized for steam generation in every section where transportation facilities permit its being laid down profitably. The record for 1902 shows unprecedented progress. The number of producing wells is 2,152, and the production for the year was 13,686,089 barrels. Oil wells of transportation facilities, 424 producing wells were capped and not being pumped at the close of the year. The depth of producing wells ranges from 200 feet at Summerville, to 5,584 feet at Fullerton. The Southern Pacific Railroad Company has
504 locomotives consuming 600 barrels each a month. The Santa Fé Railroad Company is also converting its 1 locomotives to oil burners. In 1902 290 engines operated between San Francisco and Winslow, Arizona, were oil-comsumers. Two years ago there was not a streamer burning oil; now there are 112 using it for fuel. The Standard Oil Company has its new pipe-line from the southern oil-fields near Bakersfield to Point Richmond on the eastern shore of San Francisco Bay, nearly completed, and it will be in operation early in 1903.

Banking.—The State has 321 banks, of which 191 are commercial, 61 savings, 49 national, and 20 private. All but the national banks are under the jurisdiction of the State Board of Bank Commissioners, which calls for detailed reports at irregular intervals two or three times each year. The aggregate resources of the banks in the State on Aug. 23, 1902, the date of the last official report, was $31,176,397. This represents a gain of $5,754,716.21 in twelve months, in comparison with the official statement of Aug. 17, 1901. Classified, the banking resources include the following items in the proportion of the year: real estate, $15,540,532.12; stocks, bonds, and warrants $112,122,208.85; loans on real estate, $116,489,806.06; loans on stocks, bonds, and warrants, $36,937,218.43; total loans; $334,129,136.64; other securities $14,512,862.97; loans on personal security, $88,746,022.52; money on hand, $33,604,414.34; due from banks and bankers, $52,415,856.22; other assets $7,737,421.08; and the total capital of all the banks in the State amounts to $52,099,044.38, and the total due depositors in all banks is $368,594,760.00. In San Francisco there are 9 savings-banks, and the deposits aggregate $138,193,443.38. The current rate of interest for loans on real-estate security is 6 to 6 per cent. per annum, the banks paying the mortgage taxes. The annual allowance of interest on deposits by the savings-banks is 3\% to 3\% per cent. The resources of the 19 commercial banks in San Francisco amount to $104,237,334.30, and the total due depositors aggregates $65,798,854.87. There was a large increase in the business of the State in the last four months of the year. The month of December, 1902, showed the heaviest clearings for any one month in the history of the State. The total being $138,571,697.04. The deposits in all the banks of the State are $248,222 per capita of the population.

Agriculture.—The farming interests of the State had a very prosperous year, and remunerative returns were made almost continuously. The wheat-crop was not up to expectations in quantity, but the quality was excellent and the prices obtained were the highest in four years next preceding. The total yield was 21,073,366 bushels. As during the two previous years, the shortage in production was in the southern portion of the State, the yield in central and northern California being bountiful. The crop of corn was 2,141,500,000 bushels. The crop of barley was a little over 19,000,000 bushels, but the higher prices brought the value up to $10,000,000. The production of cotton was light, the yield and former being about 1,000,000 bushels and of the latter something over 2,000,000 bushels. Ewe is grown very sparingly, and 350,000 sheep is a liberal estimate of the total. The wool was the highest in many years, choice lot selling at $1.15 a cental. The crop of beans was larger than usual, the total being about 115,900,000 pounds, of which 40,000,000 pounds were marketable. Hop-growers had one of the best years in the history of the industry. The production was bountiful, the total being 55,000 bales or about 10,600,000 pounds, the price ranging from 20 to 26 cents a pound.

The output of beet-sugar for the year was variously estimated at 80,000 to 85,000 short tons, 3 of the 8 refineries not furnishing statistics of their production. The crop of beets was large, and the yield of sugar ranged from 213 to 258 pounds to each ton of beets. The laboratory percentage of sugar in beets varied from 14.18 to 16.43 per cent., according to locality.

The best estimates on the production of honey place the year's crop at 3,750,000 pounds. This is below expectations, but the scarcity of spring rains in the blooming time throughout southern California caused the deficiency.

The wool-clips was about 18,000,000 pounds. This is a fair average for the past few years, and the prices generally realized by growers have been remunerative.

The rainfall at San Francisco in the season of 1901-02 was 18.98 inches, which is considerably above the preceding season. Northward it was greater, being 51.96 inches at Eureka, in Humboldt County; and southward there was a gradual decrease until at San Diego the 9.95. (See climatic table.)

Horticulture.—The yield of nearly all fruits was in excess of that of the preceding year, and generally the prices were more satisfactory to growers. Shipments of dried fruits to the Eastern States aggregated 7,141 car-loads, of which 2,011 cars were pears, 1,777 peaches, 1,033 grapes, 1,478 plums and prunes, 222 apricots, 245 cherries, and the capital of all the ships from the San Francisco market amounted to 25,099,000. The New York city took 1,475 car-loads, Chicago 1,301, Boston 745, Minneapolis 419, Philadelphia 295, and Pittsburg 278. These were the leading centers of distribution, although 10 other cities took over 100 car-loads each, and as many more over 50 car-loads each. The shipments of the year were the largest in the history of the business. The shipments of oranges and lemons for the citrus season, which begins Nov. 1, aggregated 10,180 car-loads of 350 boxes each. Of this total, 1,836 car-loads were lemons.

The prune-crop was a fair average, the estimated yield being 150,000,000 pounds. The export demand was steady, but prices were rather low until the end of December, when there was a sharp advance. The total being 8,800,000 pounds. The walnut-crop was larger than usual, and the quality was excellent, the total yield being 17,000,000 pounds. The crop of almonds was also large, the total being 5,800,000 pounds.

The viticultural interests had a very favorable season and the yield of wine, 40,000,000 gallons, was the largest for several years. Of this total, 26,000,000 gallons were dry wines and 14,000,000 gallons sweet wine. The wine grape growers capitalized the highest prices paid in many years, in some sections as high as $34 a ton being paid at the wineries for some fine varieties. In the season 350,000 tons of grapes were crushed for wine-making. The best trade estimates place the brandy production at 5,000,000 gallons.

The pack of canned fruits is slightly less than for the previous year; the total being 2,250,000 cases, each case containing 2 dozen 21-pound cans.

Dairying.—This industry has made rapid improvement during the past few years, and while the annual output is still far short of the requirements, the production of the last year shows a large increase. The coast counties—Humboldt, Marin, Sonoma, and San Mateo—are still in the
lead as producers, but the greatest recent growth is now in Santa Clara, Fresno, Stanislaus, San Joaquin, Kings, Merced, and other of the interior counties. San Francisco Bay leads in the production of cheese, the best in the State being produced in the southern part of the county. As in all other States, the business of butter-making is being transferred to factories. In 1897 California produced 10,866,646 pounds of butter by creamery process and 13,256,549 by dairy methods. In 1892 21,393,021 pounds of creamery butter were produced, while the dairy-product was only 9,935,741 pounds. The dairy-product of the year 1892 was valued at $3,128,762 pounds of butter, $474,072; value of 1,053,441 pounds of cheese, $702,371; value of 146,680 cases of condensed milk and cream, $564,758; value of milk and cream consumed, $6,238,555; value of calves from dairy cattle, $1,568,564; milk produced on dairies and creameries, $1,710,040. A dairy-school is connected with the State University at Berkeley, where instruction is given in modern and scientific methods.

Manufactures.—The natural resources of California are numerous and extensive, but the high cost of fuel has always been a barrier to the development of industries. The rapid increase in the production of crude oil and the installation of electric-power plants have so cheapened the generation of power that in the past two years the increased output of manufactured commodities has been enormous. Two years ago the annual output for the State was $392,874,781, as shown by the census. Statistics based on advice from various parts of the State show that the production of 1892 was more than $400,000,000, San Francisco's share being $150,000,000. The output of Los Angeles is about $30,000,000 a year; Oakland, $11,500,000; San José, $8,000,000; Sacramento, $11,000,000; and Stockton, $6,000,000. There are a dozen smaller cities which produce about $1,000,000 worth of commodities each year. San Francisco's factories embrace almost every line of mechanical endeavor, and the bringing of electric power, generated by the rushing streams of the Sierra Nevada mountains, enabled more small factories to begin operations in 1892 than every other year combined.

Electric Power.—With the single exception of New York, where electric power generated at Niagara Falls is transmitted to many towns, no State of the Union possesses so large a transmission facilities as California. The principal electric-power plants now in operation in the State are the Bay Counties Power Company, which has absorbed several smaller plants in the north central counties, producing in the aggregate 30,000 horse-power; the Standard Electric, producing 15,535 horse-power; the San Joaquin Electric, producing 2,520 horse-power; the Truckee River Company, producing 2,800 horse-power; the Power Development Company of Bakersfield, producing 2,500 horse-power; the Mount Whitney Company, producing 1,000 horse-power; and the Butte County Electric Company, producing 1,500 horse-power.

The long-distance record at present for any continuous length of time was made in September, 1902, when the Standard Company's lines from Oakland to Stockton, via Mission San José, were harnessed to the bay counties lines, making a continuous line of 229 miles. In October, 1902, San José and Redwood City were also connected, and the total distance was made 240 miles. This is the world's record for distance. Electrical engineers who have carefully investigated the waste of the Sierra Nevada mountains estimate that on the western slope alone at least 1,000,000 horse-power is available within reach of San Francisco. The estimate is based on a transmission distance of only 200 miles.

Seven amendments to the Constitution of the State were adopted by vote, Nov. 4, 1902. These amendments, in brief, are described as follow:

1. To permit the Legislature to levy a special tax for the support of high schools and technical schools.
2. To permit the Legislature to divide the State into counties and county, municipality, school district, reclamation or irrigation district.
3. To exempt from taxation all bonds issued by the State of California, every county, municipality, school district, or reclamation or irrigation district.
4. To permit cities to adopt their charters by a majority of the vote cast, by city election, to reduce the number of votes necessary to amend a charter from three-fifths of the electors to a majority voting thereon at any election, and to permit cities, by a petition of 1,500, or the number, to propose amendments to city charters.
5. Making eight hours a day's work on public work, whether done under public employment or by contract.
6. To permit the use of voting-machines in localities designated by the Legislature and the local authorities.
7. To permit the Legislature to appropriate money for the construction of State highways.

COLORADO, a Western State, admitted to the Union, Aug. 1, 1876; area, 105,836 square miles. The population was 184,287 in 1880; 412,198 in 1890; and 539,700 in 1900. Capital, Denver.

Government.—The following were the State officers in 1902: Governor, James B. Orman, Democrat; Lieutenant-Governor, David C. Coates, Populist; Secretary of State, David A. Mills, Populist; Treasurer, J. N. Chipley, Silver Republican; Auditor, Charles W. Crouser, Democrat; Adjutant-General, G. F. Coughlin, Populist; Attorney-General, Charles C. Post, Democrat; Superintendent of Public Instruction, Helen L. Grenfell, Democrat; Chief Justice of the Supreme Court, John Campbell, Republican; Associate Justices, Robert W. Steele and William H. Gabbert; Clerk, H. G. Clark.

The State officers are elected in even-numbered years, the term beginning in January of odd-numbered years. The Legislature holds biennial sessions, beginning in January of odd-numbered years, limited to ninety days.

Agriculture.—Colorado is rapidly developing its agriculture and stock resources. The total value of farm property in 1900, as returned to the Census Bureau, was $161,000,000. The value of farm machinery was $4,784,765, and of live stock $49,964,311. For the year 1899, the last of the decade, the value of the products from crop and range was $33,000,000, which exceeded the products of the year 1890 by $20,000,000, and was a gain of 151.6 per cent. in ten years. The percentage of income upon investment in Colorado farms for 1899 was 16 per cent.

Beet-Sugar Industry.—In the great agricultural contest held in the West in 1901 Colorado led in the beet-sugar industry, winning the first prize in the contest against California and Utah. The results made the line of Colorado's capacity as a sugar State. No place in the world has produced so large a yield of rich beets to the acre as was raised in Colorado. The largest yield of beets reported was 79,624 pounds,
Loveland is the largest reservoir in these two valleys. It cost $125,000. Its ownership is divided into 300 shares, which are now worth $1,000 each, making the value of the reservoir more than twice its original cost. The largest reservoir in Colorado is at Twin Lakes, on the Arkansas, it has a surface area of 2,000 acres and a capacity of 89,060 acre-feet. The value of this reservoir to the farmers along the Arkansas river is greatly increased because this has proved one of the most favored regions for growing sugar-beets. Another important reservoir on the Arkansas river is the Koen, near Great Bend, Kan. When completed it will have an area of more than 60 square miles and will hold when full 496,875 acre-feet of water, enough to cover 250,000 acres to a depth of 2 feet.

The tenth National Irrigation Congress opened at Colorado Springs Oct. 6, 1902. The matter of a proposed merger of the National Irrigation Congress with the Trans-Mississippi Congress came up early in the session, and it was decided to postpone the vote on the consolidation for one year. Chief-Hydrographer Newell, of the United States Geological Survey, and Edward H. of the Department of Agriculture, addressed the convention. Mr. Newell in a short speech rehearsed the history of the irrigation law and told how the carrying out of its provisions was left entirely in the hands of the Secretary of the Interior. He then narrated how the provisions could be carried out to the effect that at the beginning one or two extensive schemes of reservoirs and canals would be selected for immediate building. The selection of these would depend largely on how much of the entire cost the settlers under these improvements would be able in time to refund to the treasury.

The bulletin of the Census Bureau for 1902 says that in the last decade Colorado has advanced to the front rank of irrigated States, surpassing California in extent of land under irrigation, but remaining second in number of irrigators and value of irrigated crops. The total number of acres of irrigated crops in Colorado is 2,290,840, and there are 110,431 acres of irrigated pasture land. The present value of irrigated land in the State is estimated at $28,585,552, an average of $40.77 per acre.

Development of the Old Ute Reservation.

The Gurlay Investment Company, of Denver, has entered into arrangements with Eastern capitalists for the immediate complete of the large irrigation project in the southern part of Montrose County, and the northern section of San Miguel County, embracing an area of 2,205,000 acres. The new project insures the building of 60 miles additional of a canal of large dimensions, with laterals and side ditches 75 miles in extent; the carrying up of the two great reservoir systems, partially completed, which, when finished, will impound more than 22,000,000,000 cubic feet of water; the bridging of the Naturita creek cañon, a fine water plant for domestic purposes; the erection of a beet-sugar factory of 700 tons daily capacity; a large canning factory and other industrial enterprises. The waters of the Seven Beaver will be conducted over the entire area, the present canal system will be greatly enlarged to carry several times its present capacity, and the general work of construction will be carried out on a large scale.

The La Sal Mining Company has shipped more than 3,500 tons of their higher grade silver and copper ores to the Boston and Colorado Reduction Works, the tonnage having netted more than $250,000 above railroad and smelter charges. Im-
mense bodies of lower grade ores lie in great dumps from these mines, but the wagon transportation of 75 miles to the railroad, with a fixed tariff of 18 a ton, keeps the owners from placing it in the market.

Coal.—In the year 1902 there was unusual activity in the investigation of Colorado coal-fields, in the known as well as the unknown sections, but more especially in the region soon to be opened in northwestern Colorado by the Denver and Salt Lake Railway, now in process of construction. Experts have made extended surveys in many directions, and have reported the existence of coal in great quantities.

In the federal report for 1900 Colorado is credited with an output of 5,244,304 tons of coal in that year, the average price per ton at the mine being stated at $1.12, or a total of $5,858,036 when ready for shipment. At the average selling price, $1 a ton, the 1900 output would mean $51,000,000.

According to the census returns for 1900, Colorado contains approximately 18,100 square miles of anthracite, bituminous, and lignite-bituminous coal. A conservative estimate places the workable area in Colorado at about 50 per cent. of the total area occupied by the coal-bearing formations, and the possible coal, on the 50-per-cent. basis, is estimated by the Government experts at 33,897,800,000 tons. The magnitude of these figures will be appreciated when it is recalled that the coal area of Pennsylvania is 45,926 square miles, and that the coal area in that State does not exceed 12,774 square miles, while the coal area of all Great Britain is but 9,000 square miles.

New Industry.—A new packing plant was opened in Denver in the autumn of 1902, which is expected to make that city a distributing point for range cattle and a market for fat stock as well as for feeders. This plant will not only give employment to hundreds of men, but it is likely to stimulate the stock business of the whole State and to provide a convenient market for the stockraisers of Colorado, Wyoming, Utah, and New Mexico, and all the territory of which Denver is the natural center. The new plant has a capacity of dressing 900 cattle, 1,000 sheep, and 1,000 hogs daily.

A new device for the branding of cattle has been invented by A. A. Phipps, of Denver, Col., and adopted at the stockyards. The new branding-iron is a self-heating arrangement. The handle is a hollow tube wherein gasoline is held. On the end of the tube is an air-pump to force the gasoline down and assist in generating a gas to heat the brand on the other end. This brand is made of copper, and is heated from the inside. Tests for speed as compared with the old way have been made, and have resulted in branding at the rate of more than 100 head an hour.

New Mint.—On May 21, 1902, a bill was passed in Congress appropriating $250,000 to $300,000 to build a new mint building in Denver.

Home for Helpless Poor.—Winfield Scott Stratton, the millionaire mine-owner and builder, who died Sept. 14, 1902, at his home in Colorado Springs, left a kit, or will, for a free home, in some town in El Paso County, Colorado, to be built for the maintenance of worthy poor persons living in Colorado who are without relatives, and of whom and whose services are unable by reason of old age, extreme youth, sickness, or infirmity to earn a livelihood. The building is to be called the Myron Stratton Home, in memory of the father of the deceased millionaire.

Political.—At the State election in November the Republican candidates were elected as follows: Governor, Joseph H. Peabody; Lieutenant-Governor, W. A. Haggart; Secretary of State, James Cowie; Treasurer, Whitney Newton; Auditor, John A. Holmberg; Adjutant-General, G. F. Gardner; Attorney-General, N. C. Miller; Superintendent of Education, Helen L. Greelf. The vote on Governor was Republican, 57,612; Democrat, 80,217. The vote for the other tickets was small.

CONNECTICUT, a New England State, one of the original thirteen, ratified the Constitution Jan. 8, 1788; area, 4,900 square miles. The population, according to each decennial census, was 237,948 in 1790; 251,002 in 1800; 261,842 in 1810; 275,148 in 1820; 297,675 in 1830; 309,976 in 1840; 370,792 in 1850; 400,147 in 1860; 537,454 in 1870; 625,700 in 1880; 746,258 in 1890; and 808,355 in 1900. Capital, Hartford.

Government.—The following were the State officers in 1902: Governor, George P. McLean; Lieutenant-Governor, Edwin O. Keefer; Secretary of State, Charles Phelps; Treasurer, Henry R. Gallup; Comptroller, Abram Chamberlain; Attorney-General, George M. Cole; Insurance Commissioner, Edwin L. Beall; and Auditor, Elmer H. Wallace. The following were elected in November: Secretary of State, Charles Phelps, 1 by Theron Upson; Railroad Commissioners, Washington F. Wilcox, William O. Seymour, O. R. Fryer; Auditors, W. A. Riley, J. P. Bee; Street Commissioner, Henry E. Back; Fish and Game Commissioners, G. T. Matthewson, E. H. Geer, R. G. Pike; Sheriff; Commissioners, G. C. Waldo, Christian Schwarz, Seth Sanford; Tax Commissioner, Andrew F. Gates; Forester, Walter Mulford; Fire Marshal, John A.Russing; Commissioner of the School Fund, Carnot O. Spence; President of the Board of Charities, Henry H. Bridgman; Commissioners of Banking, C. H. Noble, G. F. Kendall; Commissioner of Building Associations, M. C. Webster; Dairy Commissioner, John B. Noble; Stock Commissioner, Heman O. Averill; Entomologist, W. E. Britton; Factory Inspector, G. L. McLean; Board of Mediation and Arbitration, F. T. Ives, G. A. Parsons, G. L. Smith, all of whom resigned in October; Chief Justice of the Supreme Court of Errors, David F. Fisk; Associate Justices, Samuel O. Prentice, Frederic B. Hall, Simeon E. Baldwin, William Hamersley. The last two mentioned are Democrats, the other judges and the elected State officers are Republicans. Clerk of the Court, George A. Conant.

The term of the State officers is two years, except that of the Attorney-General, which is four years. Elections are held in November of the even-numbered years. The Legislature meets biennially in the following January; the session is not limited as to length.

Finance.—Following is the statement of the receipts and expenditures of the State treasury for the year ending Sept. 30, 1902: Military commutation tax, $55,276.10; mutual fire-insurance companies, $12,060.01; life-insurance companies, $310,402.98; railroads, steam, $984,918.57; railroads, street, $238,922.50; non-resident stock, $141,131.35; savings-banks, $445,721.77; miscellaneous receipts, $47,249.16; interest of school-fund transferred, $110,524.21; avails of courts and forfeited bonds, $52,115.10; national aid to soldiers' homes, $30,860.38; express companies, $11,440.98; telegraph and telephones, $19,049.87; insurance commissioner, $108,860.16; sundry taxes and receipts, $88,021.96; inheritance tax, $333,734.90; investment tax (on notes, bonds, etc.), $147,041.98; interest on deposits in banks, etc.,
$31,611.70; total yearly receipts, $3,275,112.23; total yearly expenditure, $3,112,887.57; funded debt, less civil list funds in the treasury, $1,091,402.10. The expenditures include $486,000 paid for State bonds redeemed and canceled.

The grand list of the State for October, 1901, is given as $649,571,791, a decrease of $44,828,371 from the amount of the preceding year. This decrease, which is only apparent, is owing to a change in the law regarding the assessment of stock of banks, national banking associations, trusts, insurance, investment, and bridge companies.

The expenses of the Constitutional Convention were $24,362.91.

Among other items in the general expense account are the following: Salaries and expenses in executive offices, $39,314; judicial expenses, $401,324.99; board of prisoners in county jails, $100,077; State Capitol and grounds, $64,407; common schools, $483,623; State normal schools, $57,864; State Prison, $55,876; Connecticut School for Boys, $61,123; Connecticut Industrial School for Girls, $44,676; State paupers, $8,388; humane institutions, $409,040; sick and wounded soldiers, $24,660; National Guard, $148,836; Highway Commission, $129,428; interest on State bonds, $65,360; State bonds purchased, $468,000.

Education.—The number of illiterates in the State, according to the census table of 1900, was 42,973.

The number enrolled in the public schools in 1901 was 155,228, an increase of 3,963. The average number of pupils in session was 189,01; the number of schools, 1,522; value of school property, $10,837,685.27; average monthly wages of male teachers, $88.88; of female, $44.40. The total revenue for public schools was $2,989,306.54. The attendance at the New Britain Normal School was 251; at Willimantic, 110.

At the 160 parochial and private schools 31,190 pupils were registered, of whom 3,368 were over sixteen years of age; the average attendance was 23,475, and the number of teachers 867.

The enrolment at Yale in 1902 was 2,750, not including the summer school of forestry or the enrolment in the School of Mines, which was 781.

Charities and Corrections.—The report of the State Board of Charities for the fiscal year 1902 has the following item: The insane in the institutions visited are 90 in number, and include the State Prison, 11 county jails, the reform and industrial schools, 14 institutions for the insane, including private sanitariums, schools for the feeble-minded, the deaf and the blind, 18 hospitals, the 8 county temporary homes for children, and 30 private homes and asylums for children and old people. Besides these there are reports and statistics of the care of the town poor in all the 106 towns in the State, of which 90 maintain almshouses.

The expense to the State for the maintenance and supervision of these institutions was $266,073.

The amount expended by the State for building operations was $193,100, compared with $142,000 in 1901.

The average number of inmates at the State Hospital for the Insane was 2,192. Twelve private sanitariums for mental and nervous diseases are visited by the board, and a diversity of conditions is found in their equipment and general management. The number of insane persons under restraint in the State is estimated at 3,000, being distributed as follows: State hospital, 2,500; private hospitals, 350; private asylums, 290; in town almshouses, 350.

The School for Imbeciles, at Lakeville, is car-

ing for the largest number of inmates in its his-

At the Industrial School for the Blind increased activity in the working departments is reported, the number of blind residents being 30. The kind-

The records of the county temporary homes for dependent and neglected children show 348 children committed to their care during the year. The number of children placed in family homes was 306, and the number remaining in the county homes on Sept. 30 was 742.

The report of the directors of the prison gives the average daily census of convicts as 500, against 490 for the year preceding. The mortality rate, 0.94 to the 1,000, was smaller than the ratio for the State at large, and the lowest for a long pe-

The earnings from convict labor, surpassing those of any previous year, aggregated $53,875. During the past eight years the revenues from this source have steadily expanded. Supplementary revenues of $3,191 from other sources increased the total income of the prison to $57,069, which was more than 75 per cent. of the total cost of maintenance.

Military.—The strength of the National Guard is 2,961 officers and men. The net gain in the year is 16. In the past year 2 companies of coast artil-

The number of men enrolled, 108,784 liable to military duty in case of war, 26,665 exempt for legal causes, and 4,069 liable to pay a military commutation tax of $2 each a year. The disbursements of the several military departments of the State were $138,114.81.

Railroads.—The gross earnings of the steam railroads in the year ending June 30, 1902, were $45,125,648.70, compared with $41,761,906.25 for the previous year. The passenger revenue was $18,275,183.22 and the freight revenue $26,856,444.40, the balance being the revenue from other sources. The gross earnings per mile run were $1.98. The operating expenses of the year were $32,697,563.55, being an increase of $3,524,357.70 over that of the previous year, almost equaling the increase in earnings. The operating expenses per mile run were $1.44.

Of the 421 injuries to passengers, employees, trespassers, and others, 125 were fatal, only 1 to a passenger. The amount of taxes paid was $2,490,526.12, which is $15,104.77 in excess of the amount paid for the previous year. The amount of taxes paid to the State was $984,918.37. The entire amount paid for taxes is about 51 per cent. of the gross earnings. The length of main line and branches in Connecticut is 1,013.35 miles, the length of the second track 248.55 miles, and the length of the third and fourth tracks 84.88 miles. There are also 489.90 miles of sidings.

When the street railway companies began to report to the commissioners, seven years ago, there were 317 miles of street tracks; there are now 517. The capital stock was then $8,604,240. compared with $33,571,248 now. The earnings were then $2,232,031.37; they were this year $3,937,771.40. The amount of taxes paid then was $75,622.34; the amount paid now is $244,270.88.

Banks.—The deposits in the 90 savings-banks on Oct. 1, 1902, amounted to $203,522,225.98, an in-

The whole number of depositors is 444,407, an increase of 13,819. The average amount due to each depositor is $457.96, an increase of $3.89 for each depositor. The total assets amount to $214,892,897.49, a gain
over last year of $10,466,032.81. The State banks had total assets of $10,862,446.98. The liabilities were $10,862,446.98, the principal items being: Capital stock, $2,240,000; unappropriated surplus, $439,850; undivided profits, $547,250.18; and deposits, $7,484,578.72.

The trust companies had assets of $15,160,824.10. The number of State banks reporting was 8. The number of trust companies was 16.

Life-Insurance.—The premiums of all life companies doing business in the State increased from $809,703,547 in 1900 to $837,911,706 in 1901. The increase of the Connecticut companies was $1,180,546; of others, $8,109,211; of industrial companies, $5,519,061. Payments for death claims and to endowment policy-holders increased $14,024,471.

The total of the admitted assets of all companies showed a gain from $1,701,594,888 to $1,838,241,860, and the Connecticut companies alone showed an increase from $164,021,504 to $171,674,853.

The insurance increased, for the Connecticut companies, from 277,719 to 294,293 policies, and in amount from $544,067,128 to $574,900,791.

Highways.—About 133 miles of roadway were improved in one year under the old appropriation of $800,000, among the sums contributed by the towns, to $460,000. Since 1895 about 500 miles have been improved, with the aid of the State.

Industries and Products.—Of the dairy interests of the State Commissioner Noble says: "We have 26,948 farms in this State, valued at $97,425,000. The value of our farm-products in 1901 was $289,380. From this amount $61,178,000 worth was fed to live stock on the farm. All farm property, including land, buildings, implements, and live stock, was valued, June 1, 1900, at $113,305,630. The oleomargarine made in the State amounted in 1901 to 10,786,302 pounds. The poll-tax in 1901 caused a loss to the tobacco farmers of the State estimated at about $1,000,000. Experiments with the shade-grown Sumatra tobacco have been successful.

The Labor Commissioner's report gives the following items in regard to manufacturing interests in 1901: Eighty-seven concerns erected 92 additions and new factories. This stands in comparison with 245 manufacturing buildings and additions erected the twelve months previous by 172 concerns. The expenses incurred in the latter in 36 of the 168 towns, against 59 the year previous. From Jan. 1, 1901, to Oct. 30, 1901, 93 strikes and 3 lockouts were chronicled. Only one-third were failures. The totals show that 11,250 employees were involved in the strikes and that the resulting loss of time was 250,168 working days, which amounted to a loss of wages to the amount of $375,252. In 984 establishments 104,256 persons employed received an average of $441.53 each in earnings, while the daily earnings per person were $1.50 a day.

The Putnam House.—A deed conveying the historic Putnam cottage to the Israel Putnam House Association was passed at Greenwich Nov. 25, the consideration being $7,125. The association received a charter from the last Legislature for the purpose of taking possession of this property, which consists of a house and 1 acre at the top of Putnam's Hill on the Boston Post Road. The house will be used as a museum by the local chapter of the Daughters of the American Revolution.

Derby.—A memorial library given to the city by Mrs. and Mrs. H. H. Wood in memory of their son, Harcourt Wood, was dedicated Dec. 27.

Farmington.—At Farmington, Oct. 28, a building erected as a memorial to Miss Sarah Porter, of the Farmington School, was opened and presented with an inscription and appropriate exercises.

Simsbury.—A chapel in memory of Adelbert S. Hay was given by his father and mother to the Westminster School at Simsbury and dedicated Nov. 1.

Kensington.—A free library presented to Kensington by Henry Peck, of Waterbury, was dedicated Nov. 6.

Hartford.—A new hospital for consumptives, built on the crest of Newington mountain, an auxiliary to the Hartford Hospital, was opened in May.

Waterbury.—This city was devastated by two fires in February, with the loss of about 100 business buildings, involving from $4,000,000 to $5,000,000.

New Milford.—A fire at New Milford, May 5, entailed a loss of $500,000 to $700,000.

Constitutional Convention.—This convention, called by a vote of 47,517 for and 26,742 against it, met in Hartford, Jan. 1, with 106 delegates, 1 from each town. It was in session more than four months, adjourning May 15. A special election, held June 16, to decide whether the Constitution framed by the convention should be accepted, resulted in its rejection. The vote was very light; while the vote for President in 1900, the largest ever cast in the State, aggregated 180,115, and the registered vote of the State was 207,762, only 31,374 voters expressed their will in regard to the proposed Constitution—10,250 for its adoption and 21,124 against.

The interest in the work of the convention centered on its action in the matter of representation. The existing Constitution was framed in 1818, and has been modified by 30 or more amendments, which, however, did not materially change the system of town representation. The act providing for the convention provided that delegates should be chosen on the basis of town representation instead of that of population, thus giving the small towns the same control that they have in the Legislature. No radical change in the principle of apportionment was therefore to be expected.

Political.—The Republican State Convention was held in Hartford, Sept. 17. Gov. McLean declined to be a candidate for another term, and Abram Chamberlain, the Comptroller, was nominated for Governor. The names of candidates for other offices were: For Lieutenant-Governor, Henry Robert Secretary of State, Charles G. R. Vinal; Treasurer, Henry H. Gallup; Comptroller, William E. Scott; Attorney-General, William A. King; Congress- man at Large, George L. Lilley.

The resolutions approved the policy of the President and favored his renomination; opposed a general revision of the tariff; favored the re-election of Senator Platt; favored also measures in the interests of labor and supervision of trusts: thanked Gov. McLean for his able administration; and said further: "We pledge the Republican party at the coming session of the General Assembly to a fair and equitable readjustment of the senatorial districts in accordance with the constitutional amendment passed by 2 Republican Legislatures, and last ratified by the people at the polls.

"We declare our faith in the historic town system of Connecticut, but, recognizing the natural desire of the populous towns for increased representation in the house, we believe that change which will preserve the fundamental features of the present system and at the same time meet all reasonable demands, should be effected, and
that they can be accomplished by the regular process of constitutional amendment.

The Delaware delegation in Congress in New Haven Sept. 25 and nominated the following: For Governor, Melbert B. Cary; Lieutenant-Governor, E. Kent Hubbard, Jr.; Secretary, Arthur B. Calking; Treasurer, Philip Hugo; Comptroller, Edward G. Kilduff; Attorney-General, Noble E. Pierce; Representative at Large, Homer S. Cummings. The platform as reported was in part as follows:

"We have no sympathy with the Republican policy of fostering and protecting monopolies by legislation and at the expense of the people. We believe that the prices of beef, coal, and other necessities of life have been raised through illegal combinations and by means of special privileges conceded to monopoly by the party in power, and we demand the passage of such new laws as are required to supplant and give potency to existing statutes. We demand publicity as to the affairs of corporations engaged in interstate business, and the enactment of laws requiring all such corporations, before doing business outside of the State of their origin, to show that they have no water in their stock and that they are not designed to monopolize any branch of business or the production of any articles of merchandise."

Reciprocity with Cuba was favored and an immediate reduction of the tariff on Cuban imports urged. Other planks protested against the granting of ship subsidies, favored the election of United States Senators by popular vote and demanded legislation to prevent "government by injunction."

The State Prohibition Convention opened Sept. 9 in New Britain. Nominations were made as follow: For Governor, Robert N. Stanley; Lieutenant-Governor, Atwood H. Smith; Secretary, Leon M. Barnes; Treasurer, Oliver G. Beard; Attorney-General, John J. Copp; Comptroller, William Ingalis; Congressman at Large, Frederick G. Platt. By the roll call of the members of the Delegation the Republicans were continued in control of the State government.

The summary of the vote for Governor was: Chamberlain, Republican, $5,358; Cary, Democrat, 69,360; Valley, Independent, 41,200. By the decisive vote of the Republicans the balance of the ticket was returned.

The Socialist vote was considerably larger than in former elections.

On joint ballot the Republicans will have 205 in the Legislature and the Democrats 74.

Waterways.—Congress at the last session appropriated the following sums for improving the harbors: New London harbor, $29,400; New Haven harbor breakwater, $44,000; Milford harbor, $15,000; New London harbor breakwater, $39,000; New Jersey harbor, $20,000; Pawtucket river, $9,000; Thanes river, $15,000; Housatonic river, $10,000; Connecticut river, below Hartford, $30,000.

DELAWARE, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 7, 1787; area, 2,120 square miles. The population, according to each decennial census, was 30,068 in 1790; 64,273 in 1800; 72,674 in 1810; 72,740 in 1820; 78,885 in 1830; 91,532 in 1850; 112,216 in 1860; 125,015 in 1870; 146,088 in 1880; 168,493 in 1890; and 184,735 in 1900. Capital, Dover.

Governors.—The following were the State officers in 1902: Governor, John Hunn; Lieutenant-Governor, Philip L. Cannon; Secretary of State, Caleb R. Layton; Treasurer, Martin B. Burris; Auditor, Purcell B. Norman; Attorney-General, Herbert H. Ward; Insurance Commissioner, George W. Marshall; Adjutant-General, I. P. Wickersham; Chemist, T. R. Wolf; President of Board of Pilot Commissioners, Alfred D. Poole—all Republicans; Chancellor, John E. Nicholson, Democrat; Chief Justice, Charles B. Lore, Democrat; Associate Justices, Ignatius C. Grabu and William H. Boyce, Democrats, and W. C. Spruance and James Pennewill, Republicans; Clerk, William Virdin, Democrat.

The term of the State officers is four years. They are elected at the time of the presidential elections. The Legislature meets biennially in January of the odd-numbered years; the session is limited to sixty days.

Finances.—The Auditor's estimates of receipts and expenditures in 1901 were respectively $482,558 and $341,005. The assets of the State were given as $1,115,509, and the liabilities as $759,750.

Education.—By the census of 1900 it is shown that there are 17,531 illiterates in the State. The percentage of persons from ten to fourteen years of age able to read and write was 95.49 in 1900; it was 98.96 in 1890. The number of illiterates in 1900 was 14,031.

The State College, at Newark, which had 114 students in May, graduated a class of 15 in June. As a result of the suspension of 6 students in May for participation in horse racing, about 100 students went out on strike.

The average monthly salaries paid to teachers in 1900 were, for men $30.60, and for women $24.08.

Waterways.—The following sums were appropriated by Congress for improvements to the waters of the State: For Delaware river—New Jersey, New York, and Delaware—$400,000; for Appoquinimink, Murderkill, and Missippen rivers, $15,000; for Smyrna river, $15,000; for Wilmington harbor, $50,000, not more than $25,000 to be used until arrangements have been made to dispose of the sewage of the city so as to prevent the filling of the channel.

Products and Industries.—Statistics of manufactures of all kinds are given in Annual Cyclopedia for 1901. Others for special branches of manufacture have been published since. The capital invested in cotton manufactures, exclusive of cotton small wares, in 1901 was $494,668; the number of looms was 738; the value of products, $372,089.

Delaware ranked ninth in the list of leather-producing States in 1890, and sixth in 1900. Delaware has 5 establishments for the making of butter and cheese, with a capital of $19,085 in 1890, and 22 (1 creameries and 1 cheese factory), with a capital of $85,155, in 1900. The value of the products was $124,780 in 1890 and $252,290 in 1900.

The statistics of the ship-building industries are: Establishments, 11 in 1890 and a similar number in 1899; capital, $1,745,213 in 1890 and $2,226,811 in 1900; salaried officials, clerks, etc., 43 in 1890 and 97 in 1900; salaries of officials, clerks, etc., $108,174 in 1890 and $124,010 in 1900; average number of wage-earners, 1,769 in 1890 and 2,031 in 1900; wages, $808,077 in 1890 and $992,449 in 1900; miscellaneous expenses, $69,819 in 1890 and $122,267 in 1900; cost of materials, $594,359 in 1890 and $1,694,818 in 1900; value of products, including repairing, $2,044,313 in 1890 and $3,004,306 in 1900.

Delaware has 1 iron and steel ship-building establishments. In 1900 they built 13 iron and steel vessels, valued at $1,908,599.
Following are the figures on the manufacture of flour: Establishments, 50, with a capital of $1,127,692, in 1890, and 83, with a capital of $1,617,808, in 1900.

The value of the products was $1,675,040 in 1890 and $1,165,800 in 1900.

The reports of the shipments of fruit over the railroads in the summer of 1902 showed estimates of 2,351,460 baskets of peaches and 362,345 baskets of pears.

Political.—The factional contest in the Republican party in the State continued through the year, notwithstanding attempts that were made to bring about a compromise. The regular Republicans proposed to the Union Republicans, the supporters of J. E. Addicks, that each faction should submit to the other the names of 10 men, any one of whom they would be willing to support, the other faction to make their choice, and thus secure 2 Republican Senators. The regulars submitted a list of 10 men of Kent and Sussex Counties, agreeing to support any one of them who should be the choice of the Union Republicans, provided the latter would submit a similar list of men of New Castle County, and agree to support that one of them who should be preferred by the regulars. This proposition was rejected by the Union Republican State Committee, which suggested a caucus of the Republican members of the General Assembly, to be participated in by members of both factions and the selection by each of a candidate of its choice, to be voted for by all the members in open session. It was desired to have a special session of the Legislature called. This proposal was rejected. The one faction was determined on “Addicks or nobody,” the other on “nobody rather than Addicks.” They held separate State conventions, each naming a candidate for member of Congress, but uniting on the candidates for Treasurer and Auditor, thus causing the election of the Democratic candidate for Congress. William M. Byrne, District Attorney for the State, resigned that office to become the candidate of the Union Republicans for Congress, and after his defeat he was reappointed to the federal office by the President.

The Regular Republican Convention met in Dover on the 19th of June and nominated the following ticket:

For Representative in Congress, Dr. L. Heisler Ball; Treasurer, Martin B. Burris; Auditor, Purnal B. Norman. The greater part of the platform was in support of the national policy of the party. On State affairs the following declarations were made: "We demand State legislation looking to a complete and comprehensive system of auditing the accounts of all State, county, and hundred officials, to the wise and systematic improvement of the public highways under county road engineers, and to identical methods of conducting elections in all the counties.

"We favor a free and untrammeled ballot, and we pledge ourselves to the repeal of the clause of the State Constitution requiring the payment by the voter of any money as a qualification for exercising the right of an elector.

"We favor legislation providing salaries for all State officers. We also favor better facilities and higher efficiency in our schools, and we desire that colored children should enjoy greater educational opportunities."

The ticket of the Union Republicans, whose convention was held in Dover, Sept. 2, was: For Representative in Congress, William Michael Byrne; Treasurer, Martin B. Burris; Auditor, Purnal B. Norman, and all the State officials the platform expressed satisfaction with the present administration; demanded legislation for good roads, and for protection of workmen operating complicated machinery; declared in favor of permanent registry of voters, and salaries for county officials; and said further: "That the interstate commerce law ought to be rigidly and impartially enforced, so that shippers of goods over a shorter haul should not be discriminated against in favor of a shipper of goods over a longer haul. We demand that the anthracite coal-mines of the country, which are at present closed, shall be opened and operated and coal supplied to the people at a fair and reasonable price therefor, and we believe that the owners of said mines, having devoted them to a public use, have granted to the public an interest in such use, and must, to the extent of the use, submit to be controlled by the public for the common good; that this public interest in said mines demands that they be immediately opened and operated; and that this interest is one that should be protected and conserved by the courts of the country."

The Democratic Convention, which was held in Dover, Sept. 17, nominated the following ticket:

For Representative in Congress, Henry A. Houton; Treasurer, Joseph H. Hossinger; Auditor, J. Thomas Lowe. An unsuccessful effort was made to include in the platform the principles of the Kansas City platform. Following is a part of those adopted:

"We favor the earliest possible completion of the inland waterway to our schools, the creation of good roads, the encouragement of competing lines of transportation by legislation favorable to electric railways and steamers on navigable waters, and believing the time has come when the condition of our State treasury under the operation of laws enacted by Democrats while in control of our Legislature warrants it, we favor abolishing all State taxes on merchants, manufacturers, and similar licenses.

"We favor a permanent system of registration and abolishing the registration fee of $1 as a prerequisite to voting."

The Prohibitionists, in convention in Middletown George W. Todd for Representative Congress, John H. Kelly for Treasurer, and H. B. Hitchcock for Auditor were elected. The vote for Treasurer was 20,705 for Burris to 16,652 for Hossinger. The members of the Prohibition convention elected to Congress by 16,396 against 8,028 for Regular Republican, and 12,988 for Byrne, Union Republican. The Prohibition candidate had 59 votes, and the Social-Labor 216.

The Legislature will have 30 Republican and 21 Democratic. FLORIDA, a Southern State, admitted to the Union, March 3, 1845; area, 58,969 square miles.

The population, according to each decennial census since admission, was 87,445 in 1850; 149,415 in 1860; 187,748 in 1870; 269,485 in 1880; 393,231 in 1890; and 528,542 in 1900. Capital, Tallahassee.

Government.—The following were the State officers during the year: Governor, William Jennings; Secretary of State, B. Clay Crawford; Treasurer, James R. Whifford; Comptroller, Azoo C. Croom; Attorney-General, William B. Lamar; Superintendent of Public Instruction, William N. Sheats; Adjutant-General, J. Clifford; State Board of Education, E. McElvin; State Chemist, E. R. Rose; State Auditor, W. V. Knott; Railroad Commissioners, J. E. Day (resigned; R. Hudson Burr appointed), L. L. Morgan, J. R. Soule, and J. L. Thomas; Joseph Y. Porter; Board of Health, E. M. Hay.
dry, Horace E. Simpson, M. D., N. B. Broward; Chief Justice of the Supreme Court, R. F. Taylor; Associate Justices, Milton H. Mabry (succeeded by W. A. Hocker), Frances B. Carter; Supreme Court Commission, W. A. Hocker, J. G. Glen, E. C. Maxwell. The Supreme Court Commission was abolished in November by law, and three additional justices of the Supreme Court appointed, as follows: Evelyn C. Maxwell, Thomas M. Shackleford, Robert S. Cockerell. Supervisor of Convicts and Convict Camps, Robert F. Rogers.

The term of the State officers is four years. They are elected in November of the years of the presidential elections. The Legislature meets biennially on the first Tuesday after the first Monday of April of the odd-numbered years. The session is limited to sixty days.

Valuation.—The assessed valuation on property of all kinds for 1901 was $87,551,192.17, an increase of $694,358 over the assessed valuation for 1900. The following data are given by the Comptroller in his last report: Number of acres, 25, 507,672; number under cultivation or improved, 1,117,617; valuation of improvements (exclusive of improvements on homesteads), $30,400,000; valuation of town and city lots with improvements thereon, $23,660,288; aggregate value of real estate, $90,000,756. Number of horses, asses, and mules, 57,174; cattle and calves, 9,179; hogs and swine, 1,114,343; number of swine and dogs, 212,571. Full cash value of all animals, $6,239,958; value of personal property other than animals, $12,904,874. Aggregate value of real estate, $60,000,758; aggregate value of personal property, $17,844,822; aggregate value of railroads and rolling-stock, $10,333,481.77; aggregate value of telegraph-lines, $292,130.40. Taxes for State purposes, $487,808.96; taxes for county purposes, $1,265,879.66; school subdistrict taxes, $70,744.16. State license tax (not included in State tax), $201,043.77.

Banks.—On Jan. 1, 1902, 25 incorporated banks were doing business under the laws of Florida. At the close of business on December 31, 1901, their assets amounted to $6,149,532.92, an increase over the assets of Jan. 1, 1901, reported as $4,773,016.11, of $1,376,516.75. Five of the State banks are savings-banks or have savings departments. Their aggregate assets of $6,322,929.31. The following figures indicate the condition of the banks of the State on Jan. 1, 1902: The resources were: Loans and discounts, $17,730,168; mortgages, $11,905,168; deposits, $4,382,116; due from private banks, $4,527.44; due from incorporated banks, $1,080,903.90; bank-house furniture, $173,750.18; other real estate and mortgages, $195,949.20; checks and other cash items, $34,236.65; cash in bank, $556,853.34; total, $6,149,532.92. Liabilities: Capital stock paid in, $185,250; surplus, $104,069.11; undivided profits, $145,350.39; dividends unpaid, $815; individual deposits, $4,492,741.28; demand certificates of deposit, $358,091.75; notes and bills rediscounted and other liabilities, $117,198.44; time certificates of deposit, $197,724.40; certified checks, $13,559.20; cashier's checks outstanding, $2,055.29; due to incorporated banks, State or national, $36,021.80; total, $6,149,532.92.

Insurance.—The last statement of the Treasurer gives the number of insurance companies authorized to do business in Florida as 80. Of these 50 are fire-insurance companies, 16 life-insurance companies, and 18 miscellaneous (accident, marine, surety, boiler, plate-glass, etc.). The aggregate losses of the fire-insurance companies in 1901 were $2,990,080.45, and the receipts for the same period $329,080.77, a loss for the year of $3,050,000.88. Twelve life-insurance companies report losses in 1901 as $386,383.66; receipts as $1,040,363.48, a profit for the year of $654,978.82. Eighteen miscellaneous companies report losses of $37,945.47, receipts as $75,138.80, a profit of $40,190.33. The heavy loss of the fire-insurance companies was owing to the great conflagration at Jacksonville, May 3, 1901, when a large part of the city was destroyed, causing a total loss of from $12,000,000 to $15,000,000.

Railroads and Telegraphs.—The last report of the Florida Railroad Commission gives the following figures: Railroad mileage for the year ending Feb. 28, 1902, 3,466.45 miles, divided as follows: Main track, 2,774.35 miles; branches and spurs, 403.19 miles; yard tracks and sidings, 288.91 miles. The valuation of railroad property assessed for taxation was $18,225,178.18; capital stock and bonds of roads, $70,330,201.05. Gross earnings for the year ending June 30, 1901, $1,179,133.85; operating expenses, $6,915,656.32; income from operation, $2,263,837.53. Gross earnings for the year ending June 30, 1902 (with the exception of 4 or 5 roads not reported) are $10,079,802.23; operating expenses, $7,481,548.24; net earnings, $2,598,153.99.

The assessed valuation for the telegraph-lines of the State was $29,554.74. Telephone valuation assessed, 1,565.32 miles, ranging from 3 to 55 wires to each pole.

Education.—The report of the Superintendent of Public Instruction for the year ending in 1902 gives the following data: Total enrolment of students, 112,354; number of white students, 69,541; negroes, 42,843; white males, 35,374; white females, 34,167; negro males, 20,000; negro females, 22,843; average daily attendance during the year of both races was 76,104; of whites, 46,264; of negroes, 29,881. The average number of days of schooling was: Both races, 49; whites, 55; negroes, 41. The number of teachers employed was 2,799, divided as follows: Whites, 2,129, of whom 623 were men and 1,506 women; negroes, 670, of whom 278 were men and 392 women. The highest monthly salary paid to white men was $150; to white women $90; to negro men $100, and to negro women $50. The average salary was $44.25 to white men; $35.44; to negro men $29.99; to negro women $28.75. The amount paid to all teachers was $589,733.33. The value of all property used for school purposes was $1,000,000,000. The value of buildings owned by county boards, $646,482; value of grounds owned by county boards, $783,861.

The Florida School for the Deaf and Blind had enrolled for the school year ending June 30, 1902: Whites, 47; negroes, 26. White deaf boys, 15; white deaf girls, 22; total, 37. White blind boys, 8; white blind girls, 4; total, 10. Negro deaf boys, 13; negro deaf girls, 7; total, 20; negro blind boys, 4; negro blind girls, 2; total, 6.

The Legislature appropriated $12,000 for its support during the year ending June 30, 1902. Additional appropriations of $4,700 were made for building and other expenses. The expenditures for the year were $15,495; the balance in the treasury, June 30, 1902, was $1,700.

Corporations.—In the first six months of 1902 54 corporations were chartered by the State of Florida. The capital stock represented by these companies aggregated $1,629,129.50. Manufactures.—The United States Government statistics give the following figures: Value of manufactured products in 1890, $18,225,800; in 1900, $36,810,243. Number employed in man-
manufacturing in 1890, 13,190; in 1900, 34,230. Wages paid in manufactory in 1890, $6,918; 614; in 1900, $10,853,086. Value of farm-products in 1890, $12,086,320; in 1900, $18,309,104.

Phosphate.—According to statistics furnished by the United States Geographical Survey, Florida, since 1894, has been the chief State in the production of phosphate rock. In 1888 the number of tons mined was 2,813; in 1894 it was 589, 174; in 1901 it was 751,996.

Claims and Appropriations.—Two events of importance to Florida were the passage by Congress of the Florida Indian War claim against the United States Government, which the Florida delegation to Congress had for forty-four years vainly tried to collect; and the appropriation of nearly $35,000,000 by Congress for Florida rivers and harbors. The Indian War claim amounted to more than $1,000,000. The improvements in the principal ports of the State insured by the appropriation made by Congress will greatly increase their commercial importance.

Political.—On July 15, 1902, Florida held its first primary election for the nomination of candidates to be voted for at the regular election in November. A primary election was held on Aug. 12 to determine the nomination where no one candidate received a majority vote. Candidates for the United States Senate, 2 Railroad Commissioners, Supreme Court, Justices, State Comptroller, for the First and Second Congressional Districts, for the new Third Congressional District, Secretary of State, candidates to represent all of the counties in the legislature, lower house in the Legislature of 1903, and to represent half of the counties in the Senate, as well as a large number of county officials, were voted for by the Democratic party. No negro and no white man other than a Democrat was allowed by law to take part in this Democratic primary election. The entire State ticket nominated by the primary was of course Democratic. All the candidates were nominated by the primary were elected in November. One Republican member of the lower house was elected. The Republicans did not nominate any State ticket.

Constitutional amendments were voted for in November: one providing for three additional Supreme Court justices, and one providing for an additional judicial circuit. Both amendments were carried.

Penitentiary.—On Jan. 1, 1902, Florida had 921 convicts in its care. In 1902 449 were received and 38, who had escaped, were recaptured. In the year 1902 91 convicts were discharged on expiration of their sentences, 40 were pardoned, 78 escaped, 6 were committed to the insane asylum, and 2 were released by order of court. On Dec. 31, 1902, the convicts numbered 1,033. Of the convicts received in 1902, 12 were of foreign birth, and 437 were native-born. Their ages varied from eleven years to sixty years, the largest number being committed between the ages of nineteen and thirty-one. Of these convicts, 36 were white, 35 being males and 1 female; 413 were negroes, 399 being males and 14 females. Forty-nine were committed for murder, 55 for attempt at murder, 65 for grand larceny, and 55 for entering with intent to commit misdemeanor.

Finance.—The Treasurer's report of the general revenue fund for 1902 shows a balance in the treasury on Jan. 1, 1903, of $224,074.19. The receipts in 1902 amounted to $509,074.19, the principal sources of revenue being as follows: General revenue, $1,335,099; admission tax, $57,546.11; State taxes, $232,594.52. The debt of the State on Jan. 1, 1903, was $1,032,500, divided as follows: Bonds in State school fund, $350,100; bonds in Agricultural College funds, $135,007; bonds in seminary funds, $98,000; bonds in the hands of outsiders, $148,000. Total funds on hand Dec. 31, 1902, amounted to $1,092,458.26. Of this $902,946 was the Indian War claim fund. Appropriated and paid by the Congress of the United States in 1902 after pending nearly fifty years. The bonded debt of the State consists of $704,800 of 6-cent, bonds, and $207,700 of 3-per-cent, manuscript bonds issued to the 3 educational funds of the State. In 1873 $295,000 of 6-cent State bonds were issued, to mature Jan. 1, 1903. The sinking-fund has taken up $186,200 of these bonds. This leaves $704,800 of them outstanding, and of these $616,800 are held by the 3 educational funds of the State as investments, and $148,000 are held by individuals and will be paid on presentation. The $297,000 of 3-cent, manuscript bonds held by the educational funds of the State were issued in place of a like amount of 7-cent, bonds, which were held by these funds and which matured Jan. 1, 1901.

Charities.—The State Hospital for the Insane reports that in 1902 286 new patients were admitted, the whole number treated in the year being 926. In that year 100 discharges were made, 13 as improved, 4 as unimproved, 1 as insane. One hundred and two died in the year.

GEORGIA, a Southern State, one of the original thirteen, ratified the federal Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 82,548 in 1790; 162,866 in 1800; 252,433 in 1810; 340,895 in 1820; 518,243 in 1830; 691,322 in 1840; 906,185 in 1850; 1,057,286 in 1860; 1,184,109 in 1870; 1,542,180 in 1880; 1,837,353 in 1890; and 2,216,331 in 1900. Capital, Atlanta.

Government.—The following were the State officers in 1902: Governor, Allen D. Candler; Secretary of State, Philip Cook; Treasurer, Robert E. Park; Comptroller-General, William A. Wright; Attorney-General, Boykin Wright; Adjutant-General, J. W. Robertson; Commissioner of Education, G. R. Glenn; Commissioner of Agriculture, O. B. Stevens; Geologist, W. S. Yeates; Chemist, J. M. McDandlees; Postmaster General, John W. Lindsey; Entomologist, W. M. Scott; Librarian, Carlton J. Wellborn; Railroad Commissioner, Spencer R. Atkinson; J. Pope Brown, and G. Gunby Jordan; Prison Commissioners, J. S. Turner, C. A. Evans, and Thomas Eason; Chief Justice Supreme Court, Thomas J. Simmons; Associate Justices, Samuel Lumpkin, Hal Lewis, Andrew J. Cobb, William A. Little, and William H. Fish; Clerk, Z. B. Harrison; Court Reporter, George W. Stevens and John M. Graham, all of whom are Democrats.

Early in 1902 Joseph M. Terrell resigned as Attorney-General, to enter the gubernatorial race. He was elected. Boykin Wright was appointed by Gov. Candler to fill the unexpired term of Attorney-General Terrell, and, at the autumn ele...
tion, John C. Hart was elected Attorney-General for the full term of two years. The Legislature in the autumn of 1902 abolished the office of Special Attorney for the Western and Atlantic Rail-
way, which, up to that time, had been held by Edward T. Brown. Mr. Justice Henry T. Lewis resigned from the Supreme Court bench in 1902, and Judge John S. Candler, who was presiding officer of the Stone Mountain Judicial Circuit, was elected to succeed him. Prof. Merritt was elected to succeed W. R. Glenn as State School Commissioner.

The term of the State officers elected by the people is two years. They are elected the first Monday in October of even-numbered years. The Legislature is elected for two years, and, until 1903, met annually on the fourth Wednesday in October for a session of fifty days. In the autumn of 1902 a law was passed changing the time of sessions to the fourth Wednesday in June, and the new Legislature will have 3 sessions, the last 2 occurring in June, 1903, and in June, 1904.

Finance.—The balance in the treasury Oct. 1, 1901, was $730,722.10, while the receipts for the same period amounted to $1,799,783.10. From Oct. 1, 1902, were $3,886,183.21. The disbursements for the year amounted to $4,105,705.10, leaving a bal-
ance in the treasury Oct. 1, 1902, of $511,180.21. The Legislature was authorized to borrow $200,000 during the year to cover casual deficiencies, but it was only necessary to secure $150,000. The money was borrowed in New York at 3 per cent. 

A large debt (over the Jan. 1, 1903, was $7,631,500. On that date $100,000 of bonds was retired. The law requires that this amount of bonds shall be retired the first of every year, or $100,000 is raised by special tax levy for this specific purpose. The yearly interest charge against the State is $325,500. For years there has been in the treasury an amount, which, on Jan. 1, 1903, was $152,437.65, arising from the sale of public property, which, according to a de-
cision of the Supreme Court of the State, may now be used to pay interest on the bonded debt. The Legislature in December, 1902, took the necessary steps authorizing the Treasurer to use this fund in the manner named.

The State owns the Western and Atlantic Rail-
way Company, the Tennessee and Alabama Railroad, Chattanooga, Tenn., 137 miles, and is estimated to be worth about $12,000,000. This property was leased for twenty-five years by the Nashville, Chattanooga and St. Louis Railroad for $100,000 per annum, which the State receives yearly $420,012. The State also owns 186 shares of stock of the Georgia Rail-
way and Banking Company, valued at $20,700, and 440 shares of stock of the Southern and Atlantic Telegraph Company, incorporated by the Western Union Telegraph Company, valued at $10,000.

Valuations.—The value of all the taxable property in Georgia for 1902 was $467,310,648, which was an increase over 1901 of $10,755,749. The increase in railroad property amounted to $3,957,878. To the assessed value of corporate property returned to the Comptroller-General for taxes ($56,893,468) should be added the estimated value of that portion of this class of property which by law is exempt from an ad valorem tax, which, as a conservative estimate of the Com-
ptroller-General, is worth about $22,000,000. The increase in assessments for 1902 was not as large as in the previous year.

In 1902 the Georgia returned $15,188, 039 of property for taxation. This was a decrease of $441,742 compared with the same returns for the previous year. In 1901, however, there was a large increase in tax returns on property owned by negroes in the State. In 1902 the value of manufactures amounted to $23,494,371, which was an increase over 1901 of $4,499,407. The value of merchandise was $24,104,341, an increase of $224,487 over 1901. There was also an increase of $477,045 in iron works, while the increase in shipping and tonnage was $203,900.

In the autumn of 1902 the Legislature passed a law making the franchises of all public uti-

corations subject to taxation at the same rate as other property owned by those concerns.

Railroads.—In 1902 there were 6,035.32 miles of railroad in Georgia, against 5,816.90 miles in 1901. The gross earnings of the roads for the year ending June 30, 1902, were $24,932,708.87, an increase of $1,700,645.35 over 1901. The operating expenses for the same period were $17,435,014.53, and the net earnings were $7,501,744.03. In 1901 the net earnings of Georgia railroads were $6,862, 571.19.

Insurance.—From the reports of the insurance companies licensed to do business in Georgia, it appears that the fire companies received in premiums in 1902 $3,902,651.29, and paid losses and expenses amounting to $2,767,782.18, and paid losses to $2,758,782.18, and paid losses amounts to $3,902,651.29, and paid losses amounts to $3,902,651.29. Assured life companies received in premiums and assessments $275,376.23, and paid losses $52,756,411. The fire companies received in premiums $355,940.37, and paid losses amounts to $183,792.66. These receipts represent gross premiums. The business, as a whole, showed an increase over the business of 1901 of about 12 per cent. The State's revenue from the business done in 1902 amounts to $107, 954.76, against $96,648 in 1901.

Appropriations.—For 1903 the appropriations were as follows: Academy for the Blind, $20, 000; College for Negro Youth, at Savannah, $6,000; contingent fund, $10,675.36; contingent fund for Supreme Court, $1,900.65; State Insane Asylum, $250,000; expense fund for trustees of the asylum, $2,152.73; geological fund, $7,300; printing fund for Geological Department, $962.59; Georgia Normal and Industrial School, $22,500; horticultural fund, $4,927; insurance on public buildings, $25,903.91; North Georgia Agricultural and Mechanical College, $10,000.75; prison fund, $120,081.60; public schools, $180,46; public building fund, $17,847.80; publishing Supreme Court reports, $5,475.32; reprinting Su-
preme Court reports, $5,954.15; School for the Deaf, $25,000; public schools, $1,574,122.02; Georgia School of Technology, $40,000; Soldiers' Home fund, $15,000; for new building, $19,500; special incidental appropriations, $4,410.87; State Normal School, $21,300; State University, $8,000; expense fund for trustees of the university, $478.64; disabled soldiers' pensions, $189, 035; indigent soldiers' pensions, $302,340; indigent widows' pensions, $78,180; widows' pensions, $193,200. In addition to the regular appropriations, $84,952.81 was expended on new buildings for the State Insane Asylum at Milledgeville; $29,000 was set aside for buildings for the State University at Athens; the civil government cost $129,908.61; $500 was spent on an exhibit of Georgia minerals for the Charleston Exposition, and the legislative pay-rolls amounted to $70,826.

Banks.—The year 1902 was prosperous with the banks in Georgia. In the twelve months 23 new State banks were chartered. The aggregate paid-
in capital of State banks for the year was $87,125.

In the past few years many small banking concerns have been established in the more pros-
perous agricultural districts, and all are reported as in excellent condition. Data prepared and on
file in the Treasurer's office shows that the farmers are the heaviest class of depositors. The following is an item by item report of the condition of the banking institutions of the State in 1902:

The resources were: Loans, $365,657,560.63; overdrafts, $217,176.01; bonds and stocks, $2,371,286; real estate, furniture, and fixtures, $1,825,341.30; due from banks and bankers, $4,954,560.71; cash on hand, $2,823,757.86; other items, $92,696.13; total, $48,991,076.64. The liabilities were: Capital paid in, $9,712,787; surplus and net profits, $4,286,064.49; due banks and bankers, $2,066,864.27; due unpaid dividends, $14,691; due depositors, $57,717,347.52; rediscounts, $1,336,958; bills payable, $3,726,402; other items, $68,632.36; total, $46,981,076.64.

Education.—The State School Commissioner in his annual report issued in September, 1902, gives the total enrolment in the public schools of the State at 502,887. The State fund for school purposes was $1,538,955.17, an increase of $33,828.17 over 1901. The total enrolment in the common schools was 439,658, and in high schools 63,242. This was a total increase of 10,570 for the common schools and 8,132 for the local schools. The average attendance in the common schools was 269.4, and the number of teachers in the common schools was 3,424, an increase of 36 cents over 1901. The cost per capita in the local school system was $11.33, a decrease of 31 cents over 1901.

The amount of the school fund received by common schools was $1,283,924.40, an increase of $12,288.29 over 1901, while the amount of State fund paid by local districts was $229,177.40, an increase of $40,152.73 over 1901. The amount raised by local taxation for school purposes was $135,433.80. In 1902 334 new schoolhouses were built in the State at a cost of $245,380. Nearly all these are in country districts, and most of the money for the schoolhouses was raised by the people of the community in which the houses were located.

The number of children in Georgia of school age according to the last census was 660,870. There are 7,709 schools in the common-school system, an increase of 658 in one year, and 368 in the local-school system, an increase of 60. The number of teachers in the common-school system is 9,180, and those of the local-school system number 1,330. The average yearly salary paid to teachers in the common-school system is $129.35. Of every 100 children of school age in Georgia, 45 are black and 55 are white, and the blacks now get an amount of about 30 percent of the school fund.

It is the general belief that the greatest stumbling-block in the way of the negro's education in the State is the lack of negro teachers capable of doing justice to other members of their race. More than $5,000 is distributed to negro schools from the Slater educational fund, while the Peabody fund gives $6,000 to white schools and $1,500 to negro schools in the State. The amount invested by the Slater North in institutions for the higher education of the Georgia negro is estimated to be not less than $2,000,000. All the schools of like character for whites in the State are not worth anywhere near that sum.

Manufactures.—In 1902 there was a great increase of manufacturing industries in the State. New cotton-manufacturing plants were established, and the aggregate value of these was $250,000, against $18,904,964 in 1901. A cement plant was established at Hartwell, and more than $1,000,000 was expended on it. At Columbus several million dollars were invested in electric and power supplied by Chattooga river, while an electric lighting and power plant, upon which about $1,600,000 was expended, was established on the site of the condition of the cotton factories of the State, which, up to that period, had been sending large quantities of cotton goods to the markets of the East. Since the trade has been resumed much new machinery has been installed, so that the cotton factories of the State are now able to turn out a fine grade of goods. With the markets of the East closed, Georgia goods were forced into competition with the cotton goods of the New England States and suffered by the comparison.

In some of the principal cities of Georgia companies have been organized for the manufacture of almost all kinds of goods. Large furniture factories are in operation in different sections, and the goods are being sent to the Northern and Western markets.

Agriculture.—The farmers are giving more attention to the cultivation of grain and vegetables, while the oats and barley was 63,242. This was a total increase of 10,570 for the common schools and 8,132 for the local schools. The average attendance in the common schools was 269.4, and the number of teachers in the common schools was 3,424, an increase of 36 cents over 1901. The cost per capita in the local school system was $11.33, a decrease of 31 cents over 1901.

The amount of the school fund received by common schools was $1,283,924.40, an increase of $12,288.29 over 1901, while the amount of State fund paid by local districts was $229,177.40, an increase of $40,152.73 over 1901. The amount raised by local taxation for school purposes was $135,433.80. In 1902 334 new schoolhouses were built in the State at a cost of $245,380. Nearly all these are in country districts, and most of the money for the schoolhouses was raised by the people of the community in which the houses were located.

The number of children in Georgia of school age according to the last census was 660,870. There are 7,709 schools in the common-school system, an increase of 658 in one year, and 368 in the local-school system, an increase of 60. The number of teachers in the common-school system is 9,180, and those of the local-school system number 1,330. The average yearly salary paid to teachers in the common-school system is $129.35. Of every 100 children of school age in Georgia, 45 are black and 55 are white, and the blacks now get an amount of about 30 percent of the school fund.

It is the general belief that the greatest stumbling-block in the way of the negro's education in the State is the lack of negro teachers capable of doing justice to other members of their race. More than $5,000 is distributed to negro schools from the Slater educational fund, while the Peabody fund gives $6,000 to white schools and $1,500 to negro schools in the State. The amount invested by the Slater North in institutions for the higher education of the Georgia negro is estimated to be not less than $2,000,000. All the schools of like character for whites in the State are not worth anywhere near that sum.

Manufactures.—In 1902 there was a great increase of manufacturing industries in the State. New cotton-manufacturing plants were established, and the aggregate value of these was $250,000, against $18,904,964 in 1901. A cement plant was established at Hartwell, and more than $1,000,000 was expended on it. At Columbus several million dollars were invested in electric and power supplied by Chattooga river, while
it is impossible to administer that system properly and disburse this large sum of money without some way of selecting those who are entitled to it. The pension rolls, under existing laws, are being burdened with men who never saw the enemy, and, in many instances, deserts. Another great need is to provide by law for the appointment of official examiners of all applicants for pensions not local in character, and pay them for their work.

Prisons.—The prison system in force in the State is that of leasing out the convicts to mine-owners, lumber-mills, turpentine-farms, and, in fact, to any persons who offer bids for their hire. From the hire of the convicts in 1902 the State received $202,329.25. On Oct. 1, 1902, the number of convicts in the Georgia Penitentiary was 2,351, consisting of 252 white men and 5 white women, 1,075 negro men and 80 negro women, an increase of 70 during the year. There were 1,074 convicts who could read and write, 184 who could read only, and 1,087 wholly illiterate. The number of deaths in the year was 69, against 5 in 1901, the rate being 2.3 per cent. A farm is operated by the Prison Commission near Milledgeville, where the women, children, and old, infirm, and diseased men are sent. The capital cost is $30.74 per convict per month. The farm was $19,331.93, while the actual money paid out for farm purposes was $32,719.48. In February, 1902, the Prison Commission purchased 31 acres adjoining the farm.

There were 2,221 misdemeanor convicts undergoing punishment in county chain-gangs, of which 103 were white men, 5 white women, 2,010 negro men, and 105 negro women. Two of these chain-gangs, with an aggregate of 965 convicts, were worked for private individuals, says the Prison Commission, in most instances contrary to the law. Thirty-three chain-gangs, with an aggregate of 1,256 convicts, were worked on public works.

The State leases its convicts for a term of five years, receiving about $100 a year per capita. The contractors, in many instances, have sublet these convicts, receiving as high as $250 per capita.

Military.—The State troops consist of about 5,000 men, organized into 5 regiments of infantry of 12 companies each, 1 regiment of cavalry of 10 troops, 1 battalion of heavy artillery of 4 companies, 2 battalions of light artillery, 1 naval battery of 2 companies, 1 battalion of negro troops composed of 7 companies of infantry, and 1 light battery of artillery. Each company's minimum strength is 40 men, and the average is about 50 men. The infantry are armed with the Springfield rifle, caliber 0.45; the cavalry with the 0.45-caliber carbines; the negro troops with 0.50-caliber Springfield rifles. The naval militia is equipped with 0.45-caliber Lee rifles. The heavy artillery is armed and equipped as infantry. One light battery is armed with 2 3.2-inch caliber breech-loading cannon. The other light batteries are armed with the muzzle-loading cannon. No camp has been held under State auspices since 1897, owing to lack of funds.

The new military law, which became effective in the latter part of December, 1902, provides that in case of call for troops by the State the Governor shall order out the militia regiments as they are now organized. In the event of war the State can furnish, organized, trained, and fairly equipped, not fewer than 4,000 men in one week. The enrollment is now one year; the change from the two-year term was made by the Legislature in December, 1902.

Confederate Soldiers’ Home.—A comparatively short time after the home for helpless Confederate veterans was opened, it was burned. In the latter part of 1902 it was rebuilt and furnished at a cost of $29,012.70, of which amount $18,500 was from the insurance, and the old building the rest was contributed by private citizens. The home stands in a beautifully wooded tract of 119 acres near Atlanta. It now has 63 inmates, and 8 will return when their lease expires. The cost of maintenance has been about $10 a month per capita. In 1901 the Legislature appropriated $16,000 for a maintenance fund for the home, and in 1902 the State authorities set aside a like amount.

Political.—The Democratic party held its State convention in Atlanta on July 2, 1902. The distinctive portion of the platform adopted was this: "We favor the enactment of such laws as will afford equal and exact justice to labor and capital alike, and the administration of those laws in such a spirit of fairness as will protect and foster the interests which are already in the State and encourage the establishment of new enterprises, thereby affording larger and more extended fields of industry for our citizens. We do not believe the cause of labor's betterment should be made a political issue in this State. The best interests of the people, as well as the furtherance of that cause, demand the complete separation of that question from personal party questions. We approve the wisdom and safety of the non-partisan policy which characterizes our present legislation upon this subject, and commend the same to the people of the State."

The following ticket was nominated: For Governor, Joseph M. Terrell; Attorney-General, John C. Hart; Comptroller-General, W. A. Wright; Secretary of State, Hiram Philips; and 100 other State officials. The convention then adjourned.

Hawaiian Agriculture.—O. B. Stevens; Prayer Commissioner, Thomas Eaton; Treasurer, Robert E. Park; State School Commissioner, W. B. Merritt; Justice of Supreme Court, Samuel Lumpkin and A. J. Cobb.

The Populist party held its State convention in Atlanta on Aug. 12, 1902. No platform was announced. James K. Hines was nominated for Governor, but he declined the nomination. The other men on the ticket nominated were: For Secretary of State, B. F. Lee; Treasurer, J. H. Taylor; Comptroller-General, W. W. Wilson; Attorney-General, P. F. Rickard; and Commissioner of Agriculture, W. L. Peck; State School Commissioner, S. H. Zellner.

At the election in October the Democratic ticket was successful. The Populist vote was small.

HAWAI'I, a Territory of the United States, formerly an independent kingdom, proclaimed a republic in 1894, and on Aug. 12, 1886, annexed to the United States in accordance with the annexation treaty signed at Washington on June 16, 1897. On June 14, 1900, the islands were organized as a Territory in accordance with an act of Congress, approved April 30, 1900, which admitted to United States citizenship all persons who at the date of the proclamation of annexation were citizens of the Hawaiian Republic.

Sanford B. Dole, President of the Hawaiian Republic, was appointed Governor of the Territory.

Area and Population.—The area and population of the islands according to the census of 1900 are given in the following table:

</table>
The increase in population since 1890 was 44,981, or 41.2 per cent. The number of Hawaiians in 1900 was 29,834, a decrease of 1,185 in four years; part-Hawaiians, 7,635, a decrease of 666; whites, 26,593, an increase of 6,105; Japanese, 62,122, an increase of 30,793; Chinese, 25,742, an increase of 6,360. Honolulu, the capital and chief port, situated on the island of Oahu, had 39,905 inhabitants in 1900.

There were 189 schools in 1899, having 15,460 pupils, of whom 5,043 were Hawaiian, 2,721 part-Hawaiian, 5,822 Portuguese, 2,437 Asiatics, 601 American, 213 British, and 337 German, and having 544 teachers, of whom 282 were American, 130 Hawaiian and part-Hawaiian, and 66 British.

Commerce and Production.—From Jan. 1 to June 14, 1900, the value of the imports was $11,988,000, compared with $19,059,000 for the entire year 1899. The value of exports of Hawaiian products for the year 1900 was $25,461,000, compared with $22,629,000 for the previous year. Sugar was exported in 1900 of the value of $23,771,344; coffee, $176,749; hides and tallow, $88,182; bananas and pineapples, $45,005; rice, $24,077. Of the total of the year 1900 amounts reported $1,156,554 came from Great Britain, $453,727 from Australia and New Zealand, $136,585 from Canada, and the rest almost exclusively from the United States. The chief imports were provisions, groceries, cereals, clothing, lumber, machinery, hardware, and cotton cloth. Of the exports of 1900 the United States received 99.6 per cent. By the year ending June 30, 1900, the exports were $3,000,000 less in value than in the previous year, owing mainly to lower prices for sugar, though most of the exports fell off.

Navigation.—Steamship lines run between Honolulu and San Francisco and the ports of Australasia, Japan, and China. The number of vessels entered during 1900 was 565, of 567,265 tons, having increased from 396 of 447,997 tons, in 1896.

Railroads and Telegraphs.—There are railroads in Hawaii, Maui, and Oahu islands having a total length of 100 miles. Telegraph-lines connect different points in Oahu, Hawaii, and Maui, and a cable is laid between the two former islands. The Marconi wireless telegraph was tried in the spring of 1901 for communication with the other islands. The total length of telegraph-lines is 250 miles. The telephone was introduced early into Honolulu and is used by all.

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 48,000 square miles; population in 1890, 94,385; in 1900, 161,772. Capital, Boise City.

Governor.—The following were the State officers during the year: Governor, Frank W. Hunt; Lieutenant-Governor, Thomas F. Terrell; Secretary of State, Charles J. Bassett; Auditor, Egbert W. Jones; Treasurer, John J. Plumer; Attorney-General, Frank Martin; Adjutant-General, J. L. Weaver; Superintendent of Public Instruction, Charles E. French; Mine Inspector, Martin H. Jacobs; State Engineer, D. W. Ross; Chief Justice of the Supreme Court, Ralph W. Quaries; Associate Justices, I. H. Sullivan and Charles O. Stockdale; Clerk, Solomon Hasbrouck.

The State officers are elected in even-numbered years, the term beginning in January of odd-numbered years. The Legislature holds biennial sessions beginning in January of odd-numbered years. Sessions are not limited, but members draw pay for only sixty days.

Valuation.—The State Auditor completed in September the computations of the assessed valuation of the State as finally fixed after the changes made by the State board. The grand total of the State was $61,291,896.36, an increase of $9,531,138.17 over the preceding year. The greatest increase was in Shoshone County—$4,547,419.96. Cassia and Elmore both showed decrease. In 1900 Cassia was ahead of the other counties in percentage of increase, but it has been slipping back ever since. Fremont County, which has developed very rapidly, did not show the gain in its assessment, having made an increase of only $92,566.45. The total of the assessments by counties reported to the State Board of Equalization was $60,282,704.60. The assessment as equalized by the State board was $51,648,827.76. The figures for railroads were $9,392,184.65; for telephones, $148,132.60; for telegraphs, $102,531.30; total as equalized, $61,291,896.36; assessment in 1901, $51,440,758.19; increase, $9,851,138.17.

The value of merchandise in the State, as equalized by the State board, was $3,041,980.23. The valuation of patented lands was given by the State board as $14,142,787.15; by the assessors at $14,463,586.96. The acreage was 2,981,286. The number of acres taxed and branches not heretofore in the first five months of the year was 34,099, the fees paid being $2,240. The entries for timber and stone land for the same period were about the same.

The Pacific and Northern Railroad was assessed at $3,500 a mile, a reduction of $250 a mile from last year's valuation. The Clearwater branch was assessed at the same amount last year. The Western Union Company's telegraph-lines were valued and assessed at $60 a mile for pole and first wire, and $15 for each additional wire, the valuation last year being $55 and $12 a mile respectively. The telephone-lines of the Rocky Mountain Bell Company and of the Independent Company, except the branch lines already assessed, were valued and assessed at $65 a mile for pole and first wire, and $15 a mile for each additional wire. The valuation of the Salmon river branch of the Oregon Short Line was fixed at $2,500 a mile. The Boise, Nampa and Owyhee and Idaho Northern roads were valued at $2,250 a mile, a reduction in the case of the first line of $500 a mile. The assessments on all main lines of railroad and branches not heretofore fixed were fixed at the same rate as in 1901, except the main lines of the Northern companies, which were assessed at $8,500 a mile, an increase of $230 a mile on the Great Northern for a distance of 80 miles, and of $230 on the Northern Pacific for 84 miles.

The tax levy was fixed at 46 mills. The rate in 1901 was 62 mills. The amount to be raised to run the State government was $245,000.

Education.—The semiannual apportionment of the public-school fund was made by the State Superintendent in July. The apportionment was made by counties, the total amount $576,975. This sum exceeded the apportionment for the same period in 1901 by $4,996.

Penitentiary.—According to the report of the warden of the State Penitentiary, the number of convicts on Nov. 1 was 120. Four convicts were received and 3 were discharged in October, during which month the bills presented and allowed on the maintenance fund amounted to $2,034.88, and on the improvement fund $50.

Mining.—A great mining revival set in this year, largely owing to the discoveries in Thunder mountain, which is expected to make Idaho one of the chief gold-producing regions of the world. Idaho has a greater area of gold-bearing territory than any other State in the Union, one
section of which, as large as the State of Pennsylvania, was very little prospected until this year, during which there has been an immense influx of prospectors. The Thunder mountain district has been now extended until it covers half a dozen important mineral sections, in which fine ledges in great number have been opened. The same work is going on beyond the Thunder range. Important discoveries have been made in Custer and Lemhi Counties. In Elmore County gold was developed in sections not before prospected, especially at Skeleton creek. Blaine County was invaded by an army of prospectors, who met with great success about the head waters of Boise and Wood rivers. Valuable gold properties were also opened in Nez, Pelz, Boise, Owyhee, Washington, and Warren Counties, some of the discoveries in Boise County being phenomenal. Several towns have sprung up in the Thunder mountain district. A postmaster was appointed at Roosevelt in February, and another at the Dewey mine in March. In April the mail-route from Idaho City to Roosevelt and Thunder mountain was selected by the Post-Office Department. The great ore bodies in the Thunder mountain district are all proved up in the company, but has not been explored to a depth of 150 feet. It is several hundred feet wide, and the grade of the ore is such that all the stamps the company can put up can be kept in operation. Nearly two miles eastward the same belt of ore is found on the Sunny-side group, and it has been traced more than two miles westward.

Wood.—The reports of the deputy inspectors to the State inspector in January show that there were 2,700,000 sheep in the State at the beginning of 1901, which number had increased to more than 3,000,000 in January, 1902. The wool clipped was 17,745,000 pounds; the amount received for it by the growers was $1,855,000; the number of sheep and lambs shipped was 796,991; the amount received for them was $1,980,000; the total amount received by Idaho sheep men for wool, sheep, and lambs was $3,460,000. As in the markets of the East the wool and mutton realized $3.75 to $4.00 per hundred, the total value at the point of consumption was $4,775,000.

A proclamation was issued by the Governor in March, establishing against sheep from neighboring States where scab was prevalent. The proclamation differed in some respects from those issued in former years, as it included only the county of Lemhi, the Federal inspectors having made provision under which all sheep approaching the line should be dipped and held twelve days before being permitted to cross, their admission then being optional with the Idaho deputy, who should determine whether there was danger of infection from any band.

Oll.—The Fossil Consolidated Land Company, Limited, was organized in March with a capital of $1,000,000 to operate in the Fossil oil-fields. It controls 1,010 acres in the district, and intends to purchase other oil-well lands in the neighborhood, for which purpose it has set aside a portion of its stock. The Idaho-Wyoming Oil Company increased its capital stock from $1,000,000 to $2,000,000. Oil was found in 11 assessment holes in November, in some at a depth of 25 feet. In the Spring valley district several wells had become daily producers; one of them was producing 45 barrels a day of a very high grade. This well is reported from the Holm Co.

Irrigation.—The Irrigation Department of the Census Bureau published the compilation for Idaho on June 15. For irrigation purposes the department has divided the State into 2 agricultural regions, the arid and the humid—the dividing lines beginning at the southern and eastern boundaries of Idaho County. The humid division contains vast areas of forest, and the rainfall is usually sufficient for the raising of general farm crops and fruits. The great Camas prairie of Idaho County, the high plateaus of Nez Perce, and the rolling hills of Lakah produce more than half the cereals raised in the State, and yield better crops than are grown in the southern irrigated counties. There were 6,803 farms in the State in 1890, covering 1,382,550 acres. Of other farms, 1,820 were in the humid section and 4,753 in the arid section. In 1900 there were 17,471 farms in the State—6,737 in the humid region, and 10,734 in the arid section. Of the 55,946,890 acres of land surface, 3 per cent. were included in farms, and only 2.6 per cent. were improved. Of the improved land 1,888,590 acres were outside the Indian reservations. The irrigated land constitutes 42.6 per cent. of the improved land. The investment by irrigation canals increased in ten years from $1,029,000 to $4,168,352. There are 36 canals, involving a constructive expense of $497,975, which distributed no water, and 16 canals involving $440,000, were failures on account of mismanagement. But the acreage under these ditches, which will be brought soon under cultivation, will undoubtedly be larger than the area now irrigated by all the ditches constructed since 1890. In 1890 the acres irrigated, outside the reservations, numbered 217,006; in 1900, 602,563. At a low estimate, the farm wealth of the State in 1890 was $1,029,000, and in 1900, $12,000,000 by irrigation. The number of acres of irrigated land for each mile of ditch is 121, while the number of acres under ditch for each mile is 270. The average cost of constructing the ditches was about $1,028 a mile, $3.79 an acre of land under ditch, and $8.46 an acre of land actually irrigated in 1899.

The State Land Board passed in April the application of the Washington Irrigation Company, which asked for the segregation of 100,000 acres of land under the Carey act. The land lies along Snake river, between Minidoka and the river. The company proposes to expend $750,000 in reclaiming the tract, which it asked the land board to withdraw from settlement. The board granted the application.

New Companies.—The report of the Secretary of State for the quarter ending Sept. 30 shows that the total amount received as fees for the quarter was $1,782.25, compared with the receipts for the same quarter in 1900, $704.70. The business of the office had more than doubled as a result of the growth and general business activity all over the State. The report shows that 33 notarial commissions were issued in the quarter, quadrupling the filings of 1900. The receipts for the present year will be more than $8,000. The increase in corporations is apparently the beginning of a vast development of the mineral wealth of the State. Among the more important incorporations during the year were the Vindicate Mining Company, of Mullan, with a capital of $1,000,000; the Golden Eagle Mining Company, of Meadows, with a capital of $3,000,000; the Flagstaff Mining Company, of Wallace, with a capital of $1,000,000; the Idaho Mining and Development Company, with a capital of $1,000,000; the Blackfoot Gold-Mining and Development Company, of Boise, capital $1,000,000; the Greyhound Mining Company, capital $1,000,000; the Stewart Mining Company, of Kellogg, capital $1,000,000; the Bullion Mining Company, limited, of Wallace, capital $1,000,000; the Maryland
Gold-Mining and Development Company, at Hail-
ley, capital $2,500,000; the Alice Mining Com-
pany, of Wallace, capital $1,000,000; the South
Sinker Gold-Mining Company, of Silver City, capi-
tal $1,000,000; the Idaho Mining Company, of
Wallace, capital $1,500,000; the Ajax Mining Com-
pany, capital $1,600,000; the Idaho-Iowa
Lateral and Reservoir Company for reclaimer
the desert lands of the looseka river valley;
ley of Idaho, capital $100,000; the Idaho Pros-
pects' Finance Company, of Boise, capital
$2,000,000; the Wake-Up-Jim Gold-Mining Com-
pany, capital $1,200,000; the Idaho Exploration
and Development Company, of Weiser, capital
$1,000,000.

Geological Maps.—The United States Geologi-
cal Survey issued in September reprints of the
Bear valley and Idaho basin map sheets, which
cover portions of the mountainous country of
western Idaho. Portions of Idaho, Custer, Boise,
Emore, and Alturas Counties are included in the
maps, as are also the Idaho City city region and the
rugged crest of the Sawtooth range for much of
its length. By the use of contour lines the moun-
tainous topography of the district is admirably
represented. The maps are large enough, about
half an inch to the mile, and are uniform
with those issued of other parts of the State.

Intermountain Fair.—The Idaho Intermoun-
tain Fair was opened at Boise, Oct. 22, and
was thronged with visitors. The mining exhibit
was particularly fine, embracing ores and precious
stones from every part of the globe. The agri-
cultural and horticultural exhibit, which occu-
pied the whole right-hand side of the building,
contained chiefly the products of the State in
these lines, and displayed many splendid speci-
mens of Idaho fruits and vegetables. The qual-
ity of the entries in the dairy department was also
exceptionally fine. The stock exhibit attracted
much attention, the exhibit of sheep excelling
anything of a similar sort that had previously
been shown in the State. The main building has
four wings, each 50 feet wide and 150 feet long.
The grand stand is an immense structure, capable
of holding 20,000 persons. There are several other
fine structures on the grounds, which are almost
encircled by box-stalls and pens for cattle.

Land Office.—The report of the Land Office for
January shows that the amount turned into the State
Treasury $219,620.82 in 1901. Of this, $137,189
was proceeds of sale of timber lands, the remainder
representing sale of school and other State lands.
The number of school, normal-school, and
university, and school of science lands sold was
15,997. In addition to the amount turned into the
general fund of the State, there was turned into
the common-school fund, interest earned upon the
general school fund, the sum of $45,609.77.

Legal Decisions.—In March the United States
Circuit Court handed down a decision that is con-
sidered of great interest to the mining interests
of the State. In The Empire State-Idaho Mining
and Development Company v. The Bunker Hill
and Sullivan Mining and Concentrating Company,
Idaho, judgment was reversed and cause remanded
with directions to enter judgment for the defend-
ant. This was what is called the King case. It
turned upon the extralateral rights of two claims
located side by side upon the same ledge, each
covering a portion of a very wide outcrop, the end
lines of the claims not being parallel. Judge
Beatty held that the lines of the older location
must turn. The location was the Viola, on the
great Bunker Hill vein. The adjoining claim
was the San Carlos. The point in contro-
versy was the ownership of ore bodies far below
the surface. As it seems difficult to cleave a
vein in two, permitting one owner to follow the
hanging-wall portion between lines in one di-
rection and giving the foot-wall owner the right
to follow it being wall lines laid in a greatly differ-
cent course, there was great interest in the decision
of this case.

In December the Supreme Court reversed the de-
cision of the lower court in the case of The
Lincoln Hardware and Implement Com-
pany. An interesting question of the mortgaging
of community property by the husband and the
status of such mortgage after the death of the
wife was involved. Kindall and two others pur-
based certain agricultural implements from the
Hardware and Implement Company and gave
chattel mortgages to secure their notes given in
payment. One of these mortgages covered the
plots then growing and to be grown on a certain
piece of land that was the community property
of Kindall and his wife, this mortgage being executed
without his wife joining in it. The Hardware
and Implement Company foreclosed the mortgage.
Kindall and his wife then began this action to en-
join the company from foreclosing the mortgage.
While this action was pending, Kindall died.
The court then permitted Kindall to prosecute the
injunction proceedings alone. The defense held
that, though the mortgage on the community
property might not have been good while Mrs.
Kindall lived, it was valid against him after her
death, a view held by the lower court and re-
versed by the Supreme Court.

Fort Hall Indian Reservation.—The Fort
Hall Indian Reservation was opened to settlers
June 17. It consists of 418,000 acres, about 100-
000 being fine farming land, and the rest known
to contain abundant mineral deposits. Nearly
3,000 prospective settlers and miners
rushed into the reservation when the sun
reached the meridian, raced madly for favored lo-
cations, and then ran back to Blackfoot to regis-
ter their claims at the Land Office. Although
the lands within the 6-mile limit of Pocatello had
not been thrown open to settlement, they were
sold to those who had claimed them in the usual
ways, and the hills east of the city swarmed with prospectors.

About 1,000 claims were staked on the first day
within 6 miles of Pocatello. The Fort Hall treaty
of April 22, 1868, provided that the lands should be
offered to the Indians for sale at the assessed value
at the time of their own selection of the lands ceded.
This excited much dissatisfaction among the white
settlers, who asserted that allotments had been made
in half-breeds and to Indians not belonging to the
reservation.

Political.—The Republican State Convention
met in Boise, Aug. 20, and nominated this ticket:
For Governor, John T. Morrison; Lieutenant-Gov-
ernor, James N. Stevens; Secretary of State, Will
H. Gibson; State Auditor, Theodore Turner; State
Treasurer, H. N. Coffin; Attorney-General, John
A. Bagley; Superintendent of Public Instruction,
Miss Mae L. Scott; Inspector of Mines, Robert
Bell; Justice Supreme Court, J. F. Ailshe; Con-
gress, Burton L. French.

The platform underlined the foreign policy of the
administration; denounced "the unpatriotic atti-
dute of the Democratic party" toward the army
and navy; declared that "the wisdom of the pro-
tective policy was manifest by its results," but favored a revision of the
tariff "which will place upon the free list
every article and product controlled by any mon-
The presidents of the State boards were as follow: Agriculture, Martin Conrad; Railroad and Warehouse Commission, James S. Neville; Pharmacy, Willis L. Ling; and Banking enabling Congress "to effectually regulate and suppress" all injurious combinations and aggregations of capital; condemned the present administration of the State, of its property, and its control, and its failure to provide adequate public policy; and the introduction of political parties into the management of educational establishments; and it inveighed against the apportionment for legislative representation made by the Federal Constitution for the counties for 1892 was $1,030,292,435. This was the valuation as given by the Board of Equalization; that given by the local assessors was only $292,517,117. The valuation of the Mississinewa stock of corporations other than railroad stock was $22,705,627. The equalized value of all railroad property, including rolling-stock, improvements, and right of way, was $86,270,000.

**Banks.**—The following statement of earnings and dividends is tabulated from reports of 188 State banks of Illinois that were doing business for the twelve months ending June 30, 1902: Capital, July 29, 1901, $19,055,000; surplus, $10, $25,725; undivided profits, $4,429,580; total dividends, consisting of loans, bonds, stocks, and other investments, $4,082,057; at the beginning of the year the constitution provided for the election of United States Senators by the people; recommended the wise and economical administration of the present State Government, shown by the fact that the State has been brought to a condition according to which it is managed on a cash basis; invited voters to compare the conduct of the business of the State Land Board under Republican and Democratic administration; favored an amendment to the State Constitution providing for initiative and referendum; favored an eight-hour day for all underground employees, an employment of married women equal property rights with men.

**INDEPENDE**

---

opoly, and such other articles and products as are beyond the need of protection"; declared that trusts are a great and growing evil, and favored an amendment to the Constitution providing for initiative and referendum; favored the Fowler currency banking bill and government by injunction; favored Government ownership of railroad, telegraph, and telephone lines; demanded an amendment to the Constitution providing for the election of United States Senators by the people; commended the wise and economical administration of the present State Government, shown by the fact that the State has been brought to a condition according to which it is managed on a cash basis; invited voters to compare the conduct of the business of the State Land Board under Republican and Democratic administration; favored an amendment to the State Constitution providing for initiative and referendum; favored an eight-hour day for all underground employees, an employment of married women equal property rights with men.

The Socialist, Populist, and Prohibition parties also nominated tickets. The candidates on the Republican ticket were received in the November election. The Republican candidate for Governor had 31,936 votes; the Democratic, 26,019. The election returns gave the Republicans majorities in both houses of the Legislature.

ILLINOIS, a Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,193 in 1840; 851,470 in 1850; 1,717,951 in 1860; 2,539,981 in 1870; 3,077,871 in 1880; 3,826,351 in 1890; and 4,281,560 in 1900. Capital, Springfield.

The following were the State officers during the year: Governor, Richard Yates; Lieutenant-Governor, William A. Northcott; Secretary of State, James A. Rose; Auditor, James S. McCulloch; Treasurer, Fred A. Busse; Attorney-General, H. J. Hamlin; Adjutant-General, James B. Smith; Superintendent of Insurance, Henry Yates; Printer Expert, Charles P. Cunningham; and Recorder of the Supreme Court. Carroll C. Boggs, James B. Ricks, Jacob C. Wilkins, Joseph N. Carter, John P. Hand, James H. Cartwright, Benjamin D. Magruder.

The presidents of the State boards were as follow: Agriculture, Martin Conrad; Railroad and Warehouse Commission, James S. Neville; Pharmacy, Willis L. Ling; and Banking enabling Congress "to effectually regulate and suppress" all injurious combinations and aggregations of capital; condemned the present administration of the State, of its property, and its control, and its failure to provide adequate public policy; and the introduction of political parties into the management of educational establishments; and it inveighed against the apportionment for legislative representation made by the Federal Constitution for the counties for 1892 was $1,030,292,435. This was the valuation as given by the Board of Equalization; that given by the local assessors was only $292,517,117. The valuation of the Mississinewa stock of corporations other than railroad stock was $22,705,627. The equalized value of all railroad property, including rolling-stock, improvements, and right of way, was $86,270,000.

**Banks.**—The following statement of earnings and dividends is tabulated from reports of 188 State banks of Illinois that were doing business for the twelve months ending June 30, 1902: Capital, July 29, 1901, $19,055,000; surplus, $10, $25,725; undivided profits, $4,429,580; total dividends, consisting of loans, bonds, stocks, and other investments, $4,082,057; at the beginning of the year the constitution provided for the election of United States Senators by the people; recommended the wise and economical administration of the present State Government, shown by the fact that the State has been brought to a condition according to which it is managed on a cash basis; invited voters to compare the conduct of the business of the State Land Board under Republican and Democratic administration; favored an amendment to the State Constitution providing for initiative and referendum; favored an eight-hour day for all underground employees, an employment of married women equal property rights with men.

The Socialist, Populist, and Prohibition parties also nominated tickets. The candidates on the Republican ticket were received in the November election. The Republican candidate for Governor had 31,936 votes; the Democratic, 26,019. The election returns gave the Republicans majorities in both houses of the Legislature.

may be classified as follows: Illinois joint-stock fire and marine companies, 6; Illinois mutual fire-insurance companies, 9; joint-stock fire and marine insurance companies of other States, 112; foreign fire and marine insurance companies, 42; mutual fire-insurance companies of other States, 12; total, 181. This shows a net loss of 17 companies as compared with the number authorized to transact business in this State at the date of the last report.

The aggregate capital stock and deposits of the stock and foreign companies doing business in the State at this date is $3,788,209, less than the aggregate capital at the date of the last report. The total assets of the companies are $414,016,880, an increase over the previous year of $3,417,358. The total surplus was $49,670,553, a decrease of $3,151,690. The total amount of capital of these companies is given as $44,230,060, a decrease from the previous year of $3,786,500.

The amount of reserves written off was $1,472,902,925, a decrease of $15,212,163. The net excess of receipts over disbursements for 1901 was $15,633,574.

The risks in force at the close of the year were $23,570,392,918, an increase of $365,667,156.

The business done in the trunk line fire and marine life insurance companies shows an increase of 8,339 policies, and $7,178,998 more insurance, exclusive of industrial business, over the previous year. The net increase of insurance in force on new and renewal insurance was 49 per cent., as against 44 per cent. in 1900. The total premiums received, apart from industrial business, amounted to $18,441,968, an increase of $1,510,789, or 9.1 per cent. on the bushel on Aug. 1 to $6,150,789.

The entire industrial business written shows an increase of 6,869 policies and $435,885 of insurance. The total business of all life-insurance companies shows an increase in income of $48,200,310, in expenditures of $27,559,083, in assets of $155,409,412, in liabilities of $110,869,786, and an increase in surplus of $44,539,629.

The 44 fidelity, surety, and casualty companies show the following aggregate results: Capital, $20,354,400; admitted assets, $128,335,984; liabilities, $100,463,423; net surplus, $21,872,561; net income, $5,446,761.

There were at the date of this report 22 assessment life and 6 assessment accident companies doing business in the State, with total admitted assets of: Life, $17,304,221; accident, $263,231.

The total admitted assets of 105 fraternal beneficiaries in the State are $21,700,875.

The report of the Railroad and Warehouse Commission for the year ending June 30, 1901, shows the total mileage of steam-railroads in the State to be 17,351 miles, an increase over 1900 of 571 miles. The mileage of surface and elevated electric roads is 218 miles, which is an increase over last year of 69 miles. The total capital of all steam-railroads in Illinois is $5,140,821,620, an increase of $723,169,620. The increase was not so great as during the previous year, but is considered remarkable. The capital stock of elevated and surface lines was $88,386,450, an increase during the year of $5,328,150. Propositionally this is a far greater increase than is shown by the steam-railroads. The total amount of taxes paid by the steam-railways was 4,725,332, an increase of $51,721. The taxes paid by surface and elevated electric roads was $153,169, an increase of $61,929.

For the first time the State Department has been able to accumulate information as to the dollar-wages paid by the railroads. The highest average salary is paid to general officers, and amounts to $16 a day, and the lowest average salary is paid to trackmen, and is $1.28. The highest average salary paid by surface and elevated electric roads is $6.40, and the lowest is $1.43 a day.

The number of passengers carried on the steam-rails was 40,085,781, and the passenger earnings per mile were $2.402, an increase per mile of $2.15. The number of tons of freight handled was 110,177,821. The number of persons employed on steam-railroads in the State of Illinois was 88,583, to whom was paid in salaries $51,999,886, an increase of $639,176 over the year 1900.

Agricultural.—The State Board of Agriculture issued a report, Aug. 1, 1902, showing the condition of the crops and the number of bushels of those already harvested. The area of wheat harvested this season, 1,774,329 acres, is 85,000 acres less than that of 1901; nevertheless the 1902 wheat crop exceeds that of 1901 by 5,475,885 bushels. The total crop, 36,088,783 bushels, is the largest harvested in the State since 1894, when the area was very much larger. The average yield per acre, 21 bushels, is the highest average ever reported. The ruling price of the grain Aug. 1 was 63 cents a bushel, making the value of the entire crop legal tender for $22,900,000. The business done by the life and fire insurance companies shows an increase of 8,339 policies, and $7,178,998 more insurance, exclusive of industrial business, over the previous year. The net increase of insurance in force on new and renewal insurance was 49 per cent., as against 44 per cent. in 1900. The total premiums received, apart from industrial business, amounted to $18,441,968, an increase of $1,510,789, or 9.1 per cent. on the bushel on Aug. 1 to $6,150,789.

The entire industrial business written shows an increase of 6,869 policies and $435,885 of insurance. The total business of all life-insurance companies shows an increase in income of $48,200,310, in expenditures of $27,559,083, in assets of $155,409,412, in liabilities of $110,869,786, and an increase in surplus of $44,539,629.

The 44 fidelity, surety, and casualty companies show the following aggregate results: Capital, $20,354,400; admitted assets, $128,335,984; liabilities, $100,463,423; net surplus, $21,872,561; net income, $5,446,761.

There were at the date of this report 22 assessment life and 6 assessment accident companies doing business in the State, with total admitted assets of: Life, $17,304,221; accident, $263,231.

The total admitted assets of 105 fraternal beneficiaries in the State are $21,700,875.

The report of the State Superintendent of Public Instruction for 1902 exhibits the following facts relating to the public schools: The last school census found 1,601,715 persons between the ages of six and twenty-one years. There were 22,273 more boys than girls. The average daily attendance in all grades was 765.057. There are 11,734 school districts in the State, and 12,856 schoolhouses, 169 of them built within the year. But 17 of the pioneer log schoolhouses remain in the State. There were 27,186 teachers employed, at wages averaging $54.55 for men and $54.18 for women. The total expenditures for teachers amounted to $12,192,075.

In the year 1901 the total expenditure for public schools amounted to $20,000,000.

There are 1,008 private schools reported in the State, and 350 high schools. The high schools cost for maintenance $1,531,552, and the total number of pupils in them was 41,961; the number of teachers employed was 1,906, the pay-roll amounting to $1,314,600.

The whole number of persons between the ages of six and twenty-one years reported as unable to read and write was 614.

Mining.—There are 54 coal-producing counties in Illinois. In the year ending July 1, 1902, the total output of 915 mines was 30,021,300 tons. The aggregate value of this coal at the mines was $28,272,690. The total number of employees was 46,005.

Charities.—The bulletin of the State charitable institutions for the quarter ending Sept. 30, 1902, shows the following facts:

The number of inmates present in all the institutions, Sept. 30, was 11,055, the average num-
ber present during the quarter being 10,565. The per capita cost of patronage was $41.11. A comparison of the liabilities and available resources of the institutions shows that the surplus for all on ordinary expense accounts was $101,906. The amount of appropriations provided in the State treasury undrawn Oct. 1, 1902, was $1,588,673.

The number of inmates present in the insane hospitals at the end of the quarter was as follows: Northern, Elgin, 526 males and 607 females, total 1,133; cost to State for quarter, $424,419. Eastern, Kankakee, 1,063 males, 1,040 females, total 2,063; cost to State, $72,150. Central, Jackson- sonville, 880 males, 618 females, total 1,498; cost, $37,870. Southern, Anna, males 576, females 472, total 1,048; cost, $37,245. Western, Watertown, males 355, females 312, total 667; cost, $21,773. Asylum for Incurable Insane, Peoria, males 380, females 320, total 700; cost, $23,346. Asylum for Insane Criminals, 162 males, cost $6,004.

The Illinois Soldiers' and Sailors' Home, at Quincy, had an enrollment of 1,919 inmates. The average per capita cost for the quarter was $34.28. The increase in the cost of living is illustrated by the fact that the average per capita cost last year for the same institution for one quarter was only $29.91.

The Asylum for Feeble-Minded Children, at Lincoln, had 1,984 inmates, 585 males and 499 females. The total cost to the state was $38,406, or $37 per capita net. The balance of cash on hand and cash due Sept. 30, 1902, was $88,898.

The Institution for the Deaf and Dumb, at Jacksonville, had 474 inmates, 292 males and 182 females. Cost per quarter $14,271, or $30 per capita. Surplus, $15,729.

The Institute for the Blind, Jacksonville, had 207 inmates, 124 males and 83 females. The cost to the State was $10,928, or $50 per capita.

The Home for Female Juvenile Offenders, at Geneva, had 200 inmates, maintained at an expense of $44 per capita.

The Soldiers' Orphans' Home, at Normal, had 352 inmates. The Soldiers' Widows' Home, at Bloomington, was maintaining 62 inmates at a cost of $38 per capita.

Fire-Prevention Beef Office.—The free employment offices of Illinois were created in 1899, and the report of work done in the three Chicago offices and the Peoria office in the year 1902 indicates that the militia system was abandoned in favor of regular employment. The total number of male applicants was 30,157, of whom 26,661 secured employment. The number of female applicants was 14,703, of whom 13,520 were successful. A glance at the detailed list of places secured shows the following figures: Female—nurses, 300; chambermaids, 970; general household, 414; factory girls, 812; waitresses, 770; dressers, 793; tailors, 1,085; laborers, 11,506; factory hands, 997; cooks, 463; housemen, 820; janitors, 362.

It is seen that the offices are of greatest benefit to large numbers of whom sought and found employment, and also that increasing numbers of skilled laborers are coming to understand the benefits of the system.

Food Commission.—This board was created in 1899, and consists of a commissioner, an assistant, and 6 inspectors, to enforce the laws in respect to food in public markets and places of public resort. The report for 1902 shows a total of 927 food samples analyzed, of which 527 were found to be pure and 397 were adulterated. It is the duty of the commission to prosecute dealers who are guilty of handling adulterated goods, and, as a result of these analyses, 338 suits were instituted in various courts, and 242 convictions were secured.

Chicago.—Business conditions in Illinois are best indicated by the situation in Chicago, where the business of the State, as well as that of the Mississippi valley, centers. The three business features that come nearest the life of a city—real estate, building, and fire and life insurance—show unparalleled prosperity. Building operations in the last year exceeded by a considerable margin those of any year for eleven years. There has been an average advance of about 15 per cent. in office space, and from 15 to 20 per cent. in store space. The building permits for the year amounted to $48,445,850, compared with $35,432,460 for 1901, the rate of increase being 36.75 per cent.

Insurance has closed a year of notable prosperity. Fire-insurance made an underwriting profit of about 10 per cent. While the premiums have been increased, the losses are still close to 60 per cent. of the premium income. The expenses on Chicago business are about $55,000,000. There has been a gain of more than $1,000,000 in life premiums. Chicago paying more than $11,000,000 in life-insurance. In the aggregate, the citizens of Illinois produced $55,000,000 for insurance of all kinds. The total fire losses for the year in Chicago were $4,812,000. Because of heavy losses, rates have been advanced 25 per cent. on mercantile stores, 10 per cent. on mercantile buildings, and 25 per cent. at the stockyards.

The real-estate market has improved, but not in a ratio to correspond with other things. There has been a sharp demand for central business, and manufacturing property. The notable feature of the market is the demand for factory property, which has advanced from 15 to 20 per cent. The best idea of Chicago's industrial growth is afforded by the value of the permits taken out for factory and warehouse construction, amounting to more than $5,100,000, an increase of 90 per cent. over the year before. The real-estate transfers filed for record aggregate $126,536,745, compared with $114,336,592 for 1901.

Progress on the Chicago river canal has been steady. The work followed closely upon the acquisition of property, and the season's work shows 2,158 linear feet added to the previous amount of 3,57 feet, of the most substantial wharves ever constructed on the river. Three new bascule bridges have been built, and 2 others are nearly completed.

A total of $5,000,000 was spent in track elevation and construction of subways. The number of miles of main track elevated was 7.77, and of other track 30.75 miles.

The year was the busiest in the history of the Chicago Bureau of Charities. The total amount of $40,239 was expended in relief work, distributed among 11,760 families. Of these families 8,400 were not previously registered. Of 15,422 applications for relief investigated by the Chicago Relief and Aid Society, 3,470 were found to be unworthy, and disapproved.

The financial operations in Chicago were large. Deposits in the national and State banks showed a gain of 7 per cent. over 1901. At one time in the year the total deposits were $500,000,000. The Board of Trade closed the year with a surplus of $21,000, compared with $10,805 last year. The clearings for the year were $83,590,507, compared to $74,476,955 for the previous year.
The wholesale dry-goods business surpassed all previous records. An increase of 10 per cent. in the volume of business brought the receipts of the wholesale establishments up to $173,030,000, exceeding the figures of 1901 by more than $15,000,000. The volume of lumber shipments from Chicago was 900,000,000 feet. The local consumption for the year is estimated at $1,175,000.

Arbitration.—The year 1902 marked a distinct advance in arbitration and conciliation in the adjustment of differences between employers and employees. The State Board of Arbitration was created in 1893; but it was hampered in its earlier years by a defective law and did not approach the highest degree of usefulness until within a recent period. With its enlarged powers and efficient membership the board has become an important factor in the industrial world. Its work in 1902 affected nearly all of the more important cities of the State. The most conspicuous results, however, were accomplished in Chicago, where, through the mediation of the board, the most serious labor disturbances of the year were adjusted. These included the strike of the department-store drivers, the strike of the auto-trade stock-hands, and the strike of the freight-handlers. The latter was the more far-reaching in its effects, completely tying up the railroad freight business into and out of Chicago, and affecting the commercial interests of all the cities in the vast territory tributary to that city. The cost of the strike was estimated to be at least $1,000,000 a day, and there was widespread confidence in the success of the State Board of Arbitration in hastening its end. The strike was declared off July 16, having been in effect ten days.

INDIANA.—A Western State, admitted to the Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census since admission, was 147,176 in 1820; 343,031 in 1830; 683,565 in 1840; 988,416 in 1850; 1,330,428 in 1860; 1,680,637 in 1870; 1,978,301 in 1880; 2,192,404 in 1890; and 2,516,482 in 1900. Capital, Indianapolis.

Government.—The following were the State officers in 1902: Governor, Winfield T. Durbin; Lieutenant-Governor, Newton W. Gilbert; Secretary of State, Union B. Hunt; Auditor, William H. Horsley; Comptroller, Frank L. Jones; Treasurer, Edward W. B. Hamilton; Attorney-General, William L. Taylor; Superintendent of Public Instruction, Frank L. Jones; Adjutant-General, John R. Ward; Commissioner of Insurance, Cyrus W. Black; Commissioner of Public Lands, L. G. Rothchild; Statistician, Benjamin F. Johnson; Geologist, Willis S. Blatchley; Tax Commissioners, J. C. Wingate, Parks M. Martin; Supervisor of Natural Gas, J. C. Leach; Secretary of the Board of Forestry, W. H. Freeman; President of the Board of Health, J. H. Forrest; Factory Inspector, D. F. McBee; Fish and Game Commissioner, Z. T. McSweeney; Secretary of the Board of Charities, Amos W. Butler; Chief Justice of the Supreme Court, James H. Jordan; Associate Justices, John V. Hadley, Alexander Dowling, Leander L. Hooks, Francis E. Baker, succeeded in January by John H. Gillett; Clerk, Robert A. Brown. All the State officials are Republicans.

A Governor is elected once in four years at the time of the presidential election. Other State officers are elected once in two years, in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years, and consists of 50 Senators and 190 Representatives.

Finances.—The State received from the General Government in July $365,590.20, the civil war claim. The State debt was reduced this year by $8,187,000, and is now $2,887,015.12, on which the annual interest is $101,565.

The tax duplicate of corporation property assessments in the State this year amounted to $191,078,300.53, an increase of $7,789,778.27.

On account of the failure of the gas supply and the consequent diminution of the value of gas property, the board reduced the assessment of pipeline companies $688,929.36. Telegraph companies' assessments were decreased $39,082.50. Transportation companies, including sleeping-car and refrigerating-car companies, were decreased $29,762.77. The board increased the assessment on steam-railroad property $3,824,836. On the property of electric and street railways it increased assessments $1,902,860. On telephone companies the increase was $923,860. On express companies it was $174,841.50.

The figures on the property of the various classes of corporations were: Telephone companies, $5,005,323.30; telegraph companies, $2,478,183.30; steam-railroads, $1,627,797.87; electric railways, $6,339,312; transportation companies, $846,048.23; express companies, $2,055,913.30; pipeline companies, $8,195.

The assessed value of all property in 1902 was $1,436,305,524. The Auditor estimates that this, together with other sources of revenue, will bring into the treasuries $18,650,000.

Decisions.—By a decision of the Supreme Court in a suit brought by the Auditor to collect taxes on the good-will of the property of a newspaper, the good-will of a business can not be taxed.

By a decision in May the Supreme Court declared the mortgage-deduction law invalid. Two of the judges concurred in a minority report. They insist that the mortgage-deduction law is unconstitutional in four particulars. About 80,000 taxpayers in Indiana are affected by the court's decision. Mortgage deductions are claimed on property amounting to $40,000,000 in value, and the benefit to the taxpayers in deductions under the law will not fall far short of $800,000.

A suit begun by the State in 1872 against the Vandalia Railroad was won in the Supreme Court in November. The Legislature, in an act in 1847, provided that after the stockholders should receive as dividends an amount equal to the sum invested and 7 per cent. per annum, the Legislature might then regulate the tolls, and all net profits thereafter, above a sum sufficient to pay an annual dividend to the stockholders of 7 per cent., should go to the fund. The Vandalia must pay a judgment of $913,905 with interest at 6 per cent. Principal and interest, the judgment amounts to $1,028,143.

The bonded debts of the 5 largest cities of the State are: Indianapolis, $2,446,800; Evansville, $2,155,000; Fort Wayne, $624,800; Terre Haute, $345,000; South Bend, $290,000.

Education.—The number of illiterates in the State in 1900 was 90,539. The percentage of persons between the ages of ten and fourteen years able to read and write was 99.45. Indians standing sixth in the list of States and Territories in this respect. In 1890 it stood thirteenth, with 93 per cent.

The report of the Superintendent of Education for the year ending July 31 shows that the total school fund was $10,443,885.12, of which the schools received 6 per cent., distributed semianually. There was an addition of $53,588.90 to this fund, principally from fines. Of the fund the $821,522.96 is in the hands of county treasurers.

The total expenses of maintaining the schools of Indiana, including all forms of expenditure,
was $8,585,354.98. The increase in the school attendance over the preceding year was 2,902 pupils. The total number of pupils admitted to schools was 60,224. There are 9,887 schoolhouses in the State, only 3 of which are log buildings.

The average daily wages of teachers in all common and high schools was $2.61. The average in cities was $2.99 and in country districts $2.33. The average length of terms was one hundred and forty-six days—one hundred and seventy-nine in cities and one hundred and twenty-six in county.

A report on the operation of the compulsory education law shows that the 108 truant officers brought into school 25,025 children at a cost of $27,885.50. The cost of assistance rendered poor children was $19,801.48. The average total expenditure for each child was $2.23.

The enrollment at the State Normal School at Terre Haute in the year ending Oct. 31, 1901, was 1,804, the largest number, 1,200, attending during the spring term. The summer-school attendance was 673. The fiscal year began with a balance of $13,072.65 in the general fund and ended with a balance of $16,123.78. From the State tax of 7½c of 1 mill, $65,910 was received. There were 475 students during the fall term, and 95 students during the spring term.

The building of the former normal school at Muncie is to be opened as the Palmer University in September, having received an endowment of $100,000 from Frank Palmer of New York, in addition to another $100,000 to be raised by the Christian Church of the country.

A class of 55 was graduated at the Indiana Law School at Bloomington. From the Medical College of Indiana 72 were graduated in April, of whom 4 were women.

A department of commerce has been added at the State University; the course requires two years and is to furnish training for business careers.

Charities and Corrections.—The number in the insane hospitals Oct. 31, 1901, was 3,961; there were 404 insane in county poor asylums, and 31 in county jails. Of those in the 4 State asylums, 2,098 were women.

The report of the Institution for the Deaf and Dumb was 384, of whom 218 were boys.

From reports received by the Board of State Charities the population of the poor asylums of Indiana on Aug. 31, 1901, was 3,091—2,113 men and 1,078 women. In a Charities Board bulletin the following information is given:

"A few years ago there was spent in outdoor poor relief, including medical aid, in Indiana over $300,000. This has been reduced in six years to less than $210,000 a year. Ten years ago 14.8 persons in each 10,000 of the State’s population were inmates of the poor asylums. Now there are 12.2 persons in each 10,000."

During the year ending May 31 the number of teachers in the Girls’ Industrial School was 137; number of pupils, 857; average attendance of pupils, 660; number of garments made, 1,267; amount expended, $614.95.

Reports made to the Board of Charities for the year ending Oct. 31, 1901, indicate that during the year there were confined in the 92 county jails of Indiana 26,115 males and 1,890 females, an increase of 350 over 1900. The report says: "A synopsis of the report shows that of the total number of prisoners 15,922 were serving sentence, 733 were confined as insane, and 5,200 were tramps." Attention is called to the number of tramps received. Some counties maintain jails as a reserve line of public expense. In one county the books showed that the regular in-and-out fee and full board were charged for every tramp received. Those who came in one evening and were let out again were paid for by the county for two days’ board at 40 cents and an in-and-out fee of 60 cents, a total of $1.30, and the tramp received a night’s lodging and 1 or 2 meals. Figures taken from the monthly reports show that for the first six months of this year, 3,232 tramps were harbored in Indiana jails at a cost of $4,483.96, of which $1,487.05 was for sheriff’s fees and $2,987.04 for board.

There were 9,111 inmates in the 13 State institutions May 1. The cost of maintenance per capita for the quarter then ending was: Central Hospital for Insane, $45.77; Northern Hospital for Insane, $37.11; Eastern Hospital for Insane, $44.67; Southern Hospital for Insane, $44.52; Soldiers’ Home, $39.05; Soldiers’ and Sailors’ Orphans’ Home, $42.11; Institution for Deaf, $39.97; School for Feeble-Minded Youth, $37.50; State Prison, $39.85; Reformatory, $36.28; Industrial School for Girls and Woman’s Prison, $49.96; Reform School for Boys, $52.74; Institution for Blind, $85.48.

Banks.—There are 114 State banks, all in excellent condition. This year 13 new banks were organized, 1 retired from business. There are 5 savings banks. The trust companies are coming into general use as depositories for savings.

The latest available report on State banks answers the call made Nov. 25, 1902. A comparison with the report made Oct. 18 shows that deposits have increased more than $800,000, loans and discounts more than $700,000, while overdrafts have decreased $40,000 over the last call.

On a combined capital and surplus of $750,550 the surplus and profits amount to $1,530,619.62.

The annual report of the savings-banks, issued in February, shows an increase in assets over the report of a year ago of $750,097.40.

Building Associations.—The State has 403 associations, with a membership of 112,822, and assets amounting to $29,289,266. Their assets have increased $729,730.14. This is the first year since 1890 that there has not been a falling off in the volume of business. In addition to this there has been an increase in loans of $1,100,748.04 and a decrease in real estate held of $958,198.50. The increase in due, prepaid and paid-up stock and deposits has been $602,300.94.

Life-Insurance.—The result of the enactment of 1899 is that the entire life insurance companies is included under the law, and now these companies find ready admission into other States, where, previous to the enactment of the law, they were debarred.

Statistics of all the companies for 1901, standard life and approved assessment and fraternal organizations, show a total paid in the State of $4,202,963.

The Antitrust Law.—This law, passed in 1901, was in effect declared unconstitutional by the decision of the United States Supreme Court in regard to the similar statute of Illinois. Both laws are invalidated by an exemption in favor of live stock and agricultural products in the hands of the raiser or producer, or of labor organizations. Under the rulings of the court, an antitrust law, to be constitutional, must apply indiscriminately to all combinations, with no exemptions or exceptions whatever.

Agriculture.—A census bulletin issued in June shows that the farms of Indiana June 1, 1900, numbered 211,897, and were valued at $411,735-340. Of this amount $154,101,880, or 18.3 per cent., represented the value of buildings. On the same date the value of farm implements and machinery was $27,330,370 and that of live
stock $109,550,761. These values added to that of farm land make the total value of farm property $768,016,471.

The total value of farm products for 1899 exceeds that for 1898 by $126,890,936. The average area of farms has declined from 130.4 acres in 1850 to 97.4 acres in 1900. Considerably more than two-thirds of the area in farms is tilled by the owners or part-owners.

The value of live stock in 1900 was $109,550,761, of which horses represent 37.1 per cent.; cattle, except cows, 20.7 per cent.; and dairy cows, 16.7 per cent. The value of the products of the dairy in 1900 was $15,729,594, while the value of the poultry and eggs was $15,014,937.

Manufactures.—In manufactures great progress is shown during the decade. The report of 1900 shows 18,015 manufacturing establishments. The aggregate capital invested in 1900 was $234,- 481,528, an increase of 78 per cent. over 1890. The number of persons employed in 1900 was 155,- 856, an increase of 31,857 since 1890, the aggregate of wages paid was $66,847,317, against $51,- 749,976 in 1890, and the value of the products was $375,338,100, an increase of almost 67 per cent. since 1890. This remarkable growth of manufacturing industries was largely due to natural gas.

By the factory inspector's report for 1902, a further increase of employment is shown, the total being 178,019, of whom 26,200 were women; there were 2,622 boys and 1,196 girls under sixteen.

Latter figures than those of the census are also shown by the report of the State Statistician, giving a comparison of 10 representative industries, which have a total of $38,714,977 capital invested in 1901, against a total of $24,380,833 in 1898. Each of the 10 industries shows a large increase in the value of the product for 1901 over that of 1898. In 1898 the value of the product was $85,283,795, and in 1901 it was $121,434,106. The greatest increase is in the beef and pork packing industry, being $18,103,273. The total amount paid for wages in 1898 was $16,368,807, and in 1901 $21,973,820.

The coal product in 1901 was given as 6,962,940 short tons, valued at $7,078,842. Valuable deposits of iron ore have been found along the line of the projected Indiana Southern Railroad, and a report of an examination by experts who have recently made an examination there. In addition to the coal deposits beds of limestone have also been found. The samples of the iron ore have been taken, and it is reported that there is practically no admixture of sulfur, and the same condition of freeness from sulfur is found in the coal veins in the immediate neighborhood.

Lawlessness.—A strike on the street-railway in Terre Haute in January was the occasion of an outbreak of the kind, in which one man, a miner, lost his life.

A negro, guilty of assault upon 2 women, was hanged by a mob near Sullivan, Nov. 20. The sheriff, from whom he was taken by the mob, was deposed from office by the Governor, in accordance with a law passed in 1901. He was, however, entitled by the same law to a hearing before the Governor, and may be reinstated if he can show that he did all in his power to protect his prisoner.

A national federation of negroes was incorporated at Indianapolis, Aug. 23, the object of which was declared to be "to protect the colored races from mob violence, to aid a general advance- ment of the race, and punish lynchers of colored people, secure equal rights for colored people in all States, and to secure legislation to pay compensation to widows of colored men deprived of their lives by other than natural causes."

In September great excitement was caused by the discovery of wholesale grave robberies in the vicinity of Indianapolis. The bodies were sold to medical colleges. Several indictments were found in November against alleged grave-robers, most of whom are negroes.

Soldiers' Memorial.—The dedication of a monument to the memory of the soldiers and sailors of Indiana who took part in the civil war was witnessed by an immense concourse at Indianapolis in May. The corner-stone of the monument was laid in 1899. Among those who took part in the dedication exercises were the Governor, Major G. V. Menzies, Gen. J. W. Foster, Gen. Lew Wallace, James Whitcomb Riley, and Commander Starr, of the Grand Army.

Political.—An election for State officers, excepting Governor, was held in November. There were 8 tickets in the field—Republican, Democratic, Prohibitionist, Populist, Socialist, and Social Labor.

The Republican State Convention met in Indianapolis, April 23, and named the following candidates: F. W. Drane, of Marion, Indiana, for Governor; J. T. Tufts, of Marshall County, for Secretary of State; W. A. Morris, of Blackford County, for Treasurer; Samuel M. Scrivner, of Lawrence County, for Auditor of State; John H. Gillette, of Jefferson County, for Attorney-General; Charles W. Miller, of Clinton County, for Clerk of Supreme Court; R. A. Brown, of Allen County, for Superintendent of Public Instruction; W. E. Pasnett, of Harrison County, for State Treasurer; Julian W. Gilroy, of Clark County, for State Senator; and John H. Crooks, of Washington County, for Speaker of the House.

The resolutions, which were very long, were largely devoted to approval of the national policy and of the leaders of the party. The present State administration was commended. Other declarations were:

"We pledge the people that the Republican party will not confer special privileges on railway or other combinations, but will maintain and preserve the right of lawful competition and the supremacy of the laws over all corporations and monopolies.

"The law touching the garnishment of wages should be revised; and the laws for the protection of miners must be enforced by expert who has recently made an examination there. In addition to the coal deposits beds of limestone have also been found. The samples of the iron ore have been taken, and it is reported that there is practically no admixture of sulfur, and the same condition of freeness from sulfur is found in the coal veins in the immediate neighborhood.

"The Democratic party demands the adoption and enforcement of proper laws regulating nominations, securing to every man the right to express his choice for the office he prefers, and the right to know to whom he belongs, whether the nominations are made by a direct primary or a delegate or mass convention."

The Democrats met in State convention in Indiana on June 4 and made nominations as follows: For Secretary of State, Albert Schoonover; Attorney-General, W. E. Stilwell; Auditor, James R. Rigs, of Cincinnati, Ohio; Treasurer, Jereau Herff; Clerk of Supreme Court, Adam Heimerberger; Superintendent of Public Instruction, Samuel L. Scott; Superintendent of Public Instruction, Samuel L. Scott; State Statistician, Myron D. King; State Geologist, Edward Barrett, Jr.; Judge of Supreme Court, Fifth District, Timothy E. Howard; 3 Judges of the Appellate Court from the Southern District, John R. East, W. H. Bracken, and John D. Magee; 3 Judges of the Appellate Court from the Northern District, R. H. Hartford, James T. Sauderson, and H. G. Zimmerman.

The platform denounced trusts, the Dingley tariff law, the Philippine policy of the Government, and the Fowlkes bill; and condemned "the Republican party for refusing to give the Interstate Commerce Commission power to enforce
UNIVERSALD STATES OF AMERICA (IOWA). 723

its decisions against discriminations in railroad rates." On the currency it said: "We recognize as an economic fact the increase of standard money arising from the vast increased production of gold from our own and foreign mines, and the prodigious influx of foreign gold into this country, as a result of an exceptional demand for our products arising from foreign wars and other causes, and we point to the results consequent upon this increase of the circulating medium as a demonstration of the truth of the quantitative theory of money."

On State affairs the following declarations were made:

We oppose granting to corporations of any other State or States the power to acquire any railroad organized and operating under the laws of this State.

We are in favor of restoring to citizens of the State the right to appeal to the Supreme and Appellate Courts in any case within jurisdiction of a justice of the peace, where the amount in controversy, exclusive of interest and costs, exceeds $50.

We condemn the Republican Governor of Indiana for his violation of the Constitutions and laws of the United States and the State of Indiana as a violation of his obligation to honor the requisition of the Governor of Kentucky upon regularly returned indictments for murder against fugitives from justice, and denounce this flagrant violation of the Constitution of the United States and the State of Indiana as a species of official lawlessness, vicious in itself and subservive of that comity among the States which is an essential element of the Union of the States."

In convention, April 16, the Prohibitionists named the following candidates: For Secretary of State, James M. Dungan; Auditor of State, Dr. J. Levi Lord; Treasurer of State, Preston Rider; Attorney-General, Sumner W. Haynes; Clerk of Supreme Court, Charles F. Holler; Superintendent of Public Instruction, Andrew F. Mitchell; State Geologist, Earl Stinespring; State Statistician, J. Lewis Speicher.

The People's party made nominations as follows in convention at Indianapolis, June 4: For Secretary of State, William B. Gill; Auditor, Joseph B. Cline; Treasurer, Henry Brocksmith; Attorney-General, David F. Boger; Clerk Supreme Court, James T. But; Superintendent of Public Instruction, Louis Patterson; State Statistician, E. S. Pope; State Geologist, Albert Shook.

Extracts from the platform follow:

"We declare in favor of municipal ownership of street-cars, water, light, and heating plants in Indiana, and against the granting of further franchises to private corporations for such purposes."

"We favor the election of county school superintendents by a direct vote of the people."

"We condemn the practise of farming out on contract the men confined in our State prisons as violators of the laws."

"We adhere most positively to our former position on the finance question, which has been, is, and will be the paramount question in American politics."

"We condemn in unmeasured terms the bill now before Congress, known as the Fowler bill, which seeks to give banks and corporations the power to issue on cash deposits."

In State convention at Terre Haute, July 5, the Socialists placed in nomination a State ticket as follows: For Secretary of State, E. H. Meyer; Auditor, James Hutchinson; Treasurer, Samuel D. Straw; Attorney-General, William McGregor; Statistician, George B. Strum; Geologist, John H. Adams; Judges of Appellate Court, William Raugh, P. J. Macomber, David Young, William J. Crater, H. R. Kepper; Superintendent of Public Instruction, Miss Martha Biegler.

The Republican ticket was successful at the polls, having a larger plurality than in the last presidential year. Following are the official figures of the vote for Secretary of State: Storms, Republican, 298,819; Schoonover, Democrat, 263,555; Dungan, Prohibition, 17,785; Gill, People's, 1,330; Meyer, Socialist, 7,111; Dreyer, Social Labor, 1,758.

IOWA, a Western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,193 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; 1,911,696 in 1890; and 2,231,829 in 1900. Capital, Des Moines.

Government.—The following were the State officers in 1902: Governor, Albert B. Cummins; Lieutenant-Governor, John Herriott; Secretary of State, William B. Martin; Treasurer, Gilbert S. Gilbertson; Auditor, Frank F. Merriam; Attorney-General, Charles W. Mullan; Superintendent of Instruction, Richard A. Flagg; Asistant Attorney-General, Melvin H. Byers; Labor Commissioner, C. F. Wennerstrum, succeeded April 1 by E. D. Brigham; Dairy Commissioner, B. P. Norton, succeeded April 1 by H. E. Wright; Custodian of Public Credit, J. D. McGarrah, succeeded April 1 by T. P. McCurdy; Veterinary Inspector, J. I. Gibson, succeeded by P. O. Koto; Railroad Commissioners, E. A. Dawson, D. J. Palmer, Edward C. Brown; Geologist, Samuel Calvin; Fish and Game Commissioner, George A. Lincoln; Librarian, Johnson Brigham; Secretary of the Board of Health, J. F. Kennedy; Secretary of the Board of Agriculture, G. H. Van Houten; Secretary of the Executive Council, A. H. Davidson; Mine Inspectors, John Verner, J. W. Miller, D. Sweeney; Chief Justice of the Supreme Court, Scott M. Ladd; Associate Justices, Emlin McClain, H. E. Deemer, J. C. Sherwin, and C. M. Waterman, resigned, and succeeded July 11 by Charles A. Bishop, Clerk, C. T. Jones. All are Republicans.

A State election is held every November, but the term of State officers is two years, the Governor, Lieutenant-Governor, Superintendent of Instruction, one Justice of the Supreme Court, and one Railroad Commissioner being chosen in the odd-numbered years, and the Secretary, Auditor, Treasurer, Attorney-General, a Justice, and a Railroad Commissioner in the alternate years. The Legislature meets in January of the even-numbered years.

Finances.—A summary of the financial report of the biennium 1900-01, made to the Legislature this year, was given in the Annual Cyclopaedia for 1901.

The collections made by the so-called "tax-ferrets" in 1901 amounted to $903,609, about 10 per cent. of which was due to the State.

The railroad assessment was raised this year to $51,112,814, an increase of $4,041,550 over that of 1901. The aggregate taxable valuation of the express companies in Iowa for 1902 is $366,273; last year it was $261,687. The increase in the actual valuation would be four times the increase in the taxable valuation, or $14,178,740.

The actual valuation of the telegraph and telephone property of the State is placed at $6,512,496. The taxable valuation is $1,825,124, or one-fourth the actual valuation.

Last year the telephone and telegraph com-
compaines had actual valuation of $5,200,096, and the taxable valuation was $1,300,248.

The war claim of $450,417.39 of Iowa against the General Government was allowed, and an appropriation was made by Congress this year for its payment.

Education.—By the census report Iowa stood second among the States and Territories in 1900 in respect of the percentage of persons from ten to fourteen years of age able to read and write, with 99.03 per cent., Nebraska standing higher with 99.68. In 1890 Iowa stood first, with 99.23 per cent. The number of illiterates of ten years and over in 1900 was 40,172.

The school report for 1902 shows a decrease in the number of children of school age, 758,810 in 1902 and 735,159 in 1901. The enrolment in 1902 was 500,173; in 1901 it was 562,602. The attendance was a little larger in the later year. The total amount expended in 1902 was $9,558,800; in 1901 it was $9,321,652. The attendance in private schools rose from 43,715 to 49,169; the enrolment in high schools was 21,692 in October, with 3,083 in the graduating classes.

Fire destroyed a wing of the main building of the Agricultural College at Ames, Aug. 14, with a loss of $10,000. The Legislature authorized a tax of one-fourth of the value of buildings and land of every agricultural college and an agricultural building to be erected the coming year. A "corn-judging school" is to be held at the college Jan. 5-17, 1903. Every farmer in the State will be present, bringing samples of corn and other seeds.

On June 11 took place the forty-second annual commencement of the College of Liberal Arts of the State University. At this time the College of Law College, and the twelfth of the College of Dentistry, at which time ground was broken for the new medical buildings.

A new university, the Memorial, established by the Sons of Veterans, was opened at Mason City in September with an enrolment of 50. At present the course is that of a military academy, occupying three years and preparing for the college course hereafter to be established.

Coe College, at Cedar Rapids, graduated 24 in June, and Des Moines College 15. Upper Iowa University, at Fayette, has received a new library from Andrew Carnegie.

Charities and Corrections.—Following is the report for one month, May, of the number of inmates in each of the state institutions and the expenses of each: Anamosa, convicts, 417, $7,014; Fort Madison, convicts, 451, $7,151; Clarinda, insane, 1,001, $17,906; Independence, insane, 1,098, $23,099; Mount Pleasant, insane, 1,067, $19,744; Council Bluffs, deaf, 196, $4,407; Vinton, blind, 142, $2,526; Davenport, orphans, 500, $6,129; Marshalltown, veterans, 363, $7,729; Glenwood, feeble-minded, 916, $11,725; Eldora, reformatory, 518, $5,397; Mitchellville, reformatory, 202, $2,726; Cherokee building, $22,232, totals, 7,001, $141,588.

The main building and the chapel of the School for the Deaf, at Council Bluffs, were burned May 9. The loss was estimated at $225,000. The State does not insure its buildings. There was also a loss of $21,000 by fire at the Anamosa Penitentiary.

The Board of Control has prepared figures showing a large increase in the number of insane in the State, and private institutions in the past year. There has been a net increase of 136, not including paroles and dismissals.

The Board of Control has fixed prices for the various classes of inmates, and persons addicted to the excessive use of narcotics in two of the State hospitals, as provided for in the law on that subject passed by the last General Assembly. In November 139 inebriates were confined in two of the hospitals.

A home for ex-convicts has been built on the outskirts of Fort Dodge by Hon. L. S. Coffin on his own farm. Its purpose is to receive the most deserving prisoners as they are discharged from the penitentiaries of the State, to place them in quiet, homelike surroundings, where they can regain their self-respect and efface the prison taint, and finally to find for them situations where they may begin life anew.

Deposits.—In the 310 savings and 235 State banks increased almost $1,000,000 between June 15 and Sept. 15. On June 18 they had deposits amounting to $133,692,464. On Sept. 15 they had $134,513,583 of deposits. In a period of two years the deposits increased $43,400,000.

Insurance.—The number of life companies transacting business in the State Jan. 1 was 128; the policies in force, 382,064; the amount of insurance in force, $534,394,418. The joint-stock and mutual fire-insurance companies wrote $211,055,076 in risks and paid $2,532,707 in losses. The State and county mutual insurance associations wrote $91,325,782 in risks and paid $4,852,002 in losses. All kinds of companies paid $4,111,060 in losses.

Railroads.—The railroad mileage in 1901 was 9,353,920; in 1902 it was 9,614,060. Other items in the two years were as follows: Net earnings, 1901, $746,385; 1902, $748,575; rates, 1901, $576,953; 1902, $449,871; net earnings per mile, 1901, $1,850; 1902, $2,003,086. There were 193 railroad accidents in 1902, of which 9 were to passengers.

The report shows a decrease in the compensation to employees, considering the daily average. In 1901 the average daily compensation was $1.84. In 1902 this dropped to $1.82. At the same time there was an increase in the aggregate of wages paid and in the number of employees.

Industries and Products.—The amount of coal produced in the State in 1901 was 5,578,522 short tons, valued at $8,016,574.

The number of farms in the census year was 228,622, valued at $1,497,554,790. Of these farms 46,840, or 20.6 per cent., were farms of less than 40 acres.

The Dairy Commissioner's report of butter shipments shows that there were 4,425,930 more pounds shipped out in 1901 than in 1900, a total of 90,808,645 going out.

The rains of 1902 were more damaging to crops than the drought of 1901. The value of the corn, wheat, oats, barley, rye, flax, potatoes, and hay was estimated in December as worth $215,722,339. In 1901 the estimate was $274,000,000.

The number of creameries fell from 994 in 1900, with 9,417 patrons, to 920 in 1902, with 8,532 patrons.

The number of manufacturing establishments in the census year was 14,819, with capital amounting to $102,733,102; the value of the products was $185,000,000.

The wooded area of the State, according to the estimate of the topographer of the national Geological Survey, is 7,000 square miles.
liquor, or aid in the delivery and distribution of any intoxicating liquor so ordered or shipped; provided that nothing herein shall prohibit traveling salesmen soliciting orders for the purchase, sale, and shipment of intoxicating liquors from persons legally authorized to sell or dispense the same."

The Supreme Court decides that the law is unconstitutional in that it interferes with interstate commerce.

Legislative Session.—The General Assembly was in session from Jan. 13 to April 11. W. L. Eaton was chosen Speaker of the House, N. E. Kendall, Speaker pro tem., and W. F. Harriman, President pro tem. of the Senate.

In the Senate were 11 Democrats and 39 Republicans in the House, 16 Democrats and 84 Republicans.

The constitutional amendments proposed were to provide for biennial instead of annual election of judges and to give to each county one member of the House of Representatives and to such larger counties as have the fixed ratio of population an additional member, the number of members of the Senate, however, to be limited to 108.

Among the larger appropriations were these: To the Board of Control of State institutions, $710,557; to the State educational institutions, $434,000; to the Commission, $2,500,000; St. Louis Exposition, $125,000; National Guard, $104,000; for erection of Vicksburg monuments, $150,000; to finish Cherokee Insane Hospital, $15,000; additional support for State institutions, $75,222; pavilion at State fair grounds, $37,500; monuments at Chattanooga, $35,000; State Library Commission, $12,000; State Historical Society, $9,500; for transferring patients to Cherokee, $21,600.

The levy of taxes for buildings at the State educational institutions was authorized—one-fifth mill for the university, and the same for five years for each of the others—the Agricultural College and the Normal School. Other acts relating to taxation were:

Making taxes on assets of any corporation, partnership or firm which are placed in the hands of a receiver a prior lien, and providing that they shall be first paid in full by the receiver.

Authorizing the levy of a 4-mill road tax.

Providing that property not to exceed $800 in actual value of any honorably discharged Union soldier or sailor of the Mexican War or of the war of the rebellion, or of the widow remaining unprovided for such soldier or sailor, shall be exempt from taxation.

Permitting communities to vote 5 per cent. taxes in aid of railroads once in ten years.

Reducing the taxes upon foreign insurance companies from 31 to 2½ per cent. upon gross premiums.

Fixing the amount to be raised during the year 1902 by taxation at $2,300,000; during the year 1903, at $2,000,000. On the present valuation this will make a levy of about 4 mills for the two years.

Repealing the section requiring boards of library trustees to fix a levy for the maintenance of libraries and permitting a levy of 1 mill in all cities having 22,000 population and 2 mills in cities having more than 22,000 for maintenance, and a levy of 3 mills in cities of more than 25,000 for building.

Acts affecting railroads provided that railroads shall report in the aggregate to the Executive Council the following: Net income derived from business originating in Iowa and terminating in other States, from business originating in other States and terminating in this State, from business neither originating nor terminating in Iowa, but carried across a part of this State. All of these items are to be included in one sum.

The State mine examiners are required to examine every mine having an average output of 50 tons or more as often as once in six months; and a board of 5 examiners is to be appointed to examine candidates for appointment as mine inspectors, mine-hoisting engineers, and mine foremen. Members of this board must hold certificates of competency and have had at least five years actual experience immediately preceding appointment.

The Board of Medical Examiners is required to issue certificates to practise to qualified osteopaths.

The age to which girls may be detained at the Industrial School was raised from eighteen to twenty-one.

The Support fund of the State institutions was fixed as follows: The Institution for the Deaf and Dumb, at Council Bluffs, $22 a month per capita for all purposes; $22 a month per capita for all salaries and supplies for the College for the Blind, at Vinton, for each resident scholar in that institution, for nine months in each year; the Soldiers' Home, at Marshalltown, $10 a month, for officers and others; the insane hospitals at Clarinda, Independence, and Mount Pleasant shall not exceed $12 a month per capita; at Cherokee, $15 when the population is under 600, $14 when the population does not exceed 750, $13 when the population is in excess of 900, and $12 thereafter, provided, however, that all in excess of $12 shall be paid out of the treasury of the State.

The allowance to the Eldora Industrial School was increased from $9 to $10 a month.

Other measures were:

Reorganizing the Supreme Court and increasing the salaries of the members from $4,000 to $6,000 per annum.

Increasing the salary of the Governor from $3,000 to $5,000. The Governor receives house rent amounting to $500 a year and $800 for services on the Executive Council, so that the increase is really from $4,100 to $6,100.

To punish kidnapping by imprisonment in the penitentiary by any term between ten years and life.

To provide that any person convicted of the murder of another person shall not receive any interest in the estate of the decedent as surviving spouse.

Punishing by imprisonment for not more than twenty years persons who advise, counsel, encourage, advocate, or incite murder, although no such killing takes place.

Providing for a department in one of the State hospitals for the treatment of inebriates, dipsomaniacs, etc.

Requiring children between seven and fourteen years to attend school at least twelve school weeks in each year.

Recognizing corporations organized for the care and placement of abandoned children.

Making the laws of Iowa with reference to negotiable instruments uniform with the laws of other States upon this subject; among other things this law practically abolishes the three days of grace.

Providing that savings-banks may loan not to exceed one-half of their capital stock to any person upon farm land worth twice the amount loaned.

Giving farmers' institutes $100 a year State aid instead of $50.
United States of America

Permitting savings-banks to take deposits to twenty times their capital stock, instead of ten times, as at present.

Using the conveyances of real estate in which the husband or wife conveyed the inchoate right of dower of the other spouse.

Providing that the inheritance between parent and child by adoption shall be the same as between parent and children born in lawful wedlock.

Relieving the State Game and Fish Warden of liability for destroying illegal fishing and gaming apparatus; promoting catfish to be game-fish, placing pickerel in the class of game-fish with reference to the closed season; prohibiting the killing of fish by drugs or dynamite, etc.; making the open season for squirrels to begin with September instead of June; making rail, plover, and sandpiper and maruh birds game.

Authorizing the organization of naval militia.

Political.—For the offices to be filled at the November election the Republican State Convention, at Des Moines, July 30, named the following candidates: For Secretary of State, W. R. Martin; Auditor of State, B. F. Carroll; Treasurer of State, Gilbert S. Gilbertson; Attorney-General, C. W. Mullan; Judge of Supreme Court, Scott M. Leady; Judge of Supreme Court, C. L. B. Cooper; Clerk of Supreme Court, J. C. Crockett; Supreme Court Reporter, W. W. Cornell; Railroad Commissioner, E. A. Dawson.

The more significant declarations of the platform were those relating to tariff revision and control of trusts, and there was some controversy over these, which was settled in the Committee on Resolutions in favor of a reiteration of last year's utterance, with an addition to the trust plank, congratulating President Roosevelt on the inauguration of judicial proceedings to enforce the antitrust laws.

Last year's platform, which is reaffirmed, contained the following paragraph concerning the tariff: We favor any modification of the tariff schedules that may be required to prevent their affording shelter to monopoly."

"We assert the sovereignty of the people over all corporations and aggregations of capital and the right of the people to enforce regulations, restrictions, or prohibitions upon corporate management as will protect the individual and society from abuse of the power which great combinations of wealth have acquired."

Attention was drawn all over the country to these declarations of the platform by the action of Hon. D. B. Henderson, Speaker of the House of Representatives, who declined to be a candidate for re-election in the Third District because he was not in accord with his constituents, not believing that the evil of trusts could be effected by revision of the tariff in the direction of free trade.

The Democratic Convention, at Des Moines, Sept. 3, made nominations as follow: For Secretary of State, Richard Burke; Auditor of State, J. S. McLuin; Treasurer of State, Dr. R. U. Chapman; Attorney-General, John D. Denison; Judge of Supreme Court (long term), Thomas Stapleton; Judge of Supreme Court (short term), J. H. Quick; Railroad Commissioner, Thomas Benson; Supreme Court Clerk, Jesse Tripp; Supreme Court Reporter, John Dalton.

By expressing the policy of the administration in regard to the Philippines, the permitting of shipments of war supplies from our ports for the use of the British in the Boer War, denouncing the pending Fowler banking bill, and demanding election of United States Senators by direct vote of the people, the platform made the following declarations:

"The tariff policy, originally adopted for the avowed purpose of raising revenue to meet the enormous burdens of the civil war, has been turned to the use of individual and class interests until it has become the creator of countless unearned fortunes and of great combinations of capital, organized in the form of trusts, which are strangling competition in many of our industries, destroying individual effort, crushing ambition largely in every line of industry, and already acquiring a power which enables them to dictate in their own interest the prices of labor and raw material and the cost of transportation of finished products."

"We charge that discrimination in freights by common carriers is the handmaid of an exorbitant protective tariff in fostering the gigantic trusts that have become a menace to the welfare of the masses, and we demand such changes in our interstate commerce act as may be necessary to secure the speedy punishment by imprisonment of any officer or agent of a corporation engaged in interstate commerce, who is guilty of such discrimination, and the enactment of further provisions that shall make such discrimination a ground for prohibiting the offending corporation from transacting the business of a common carrier in the business of interstate commerce."

A minority report from the Committee on Resolutions proposed a reaffirmation of the Kansas City platform in regard to silver change, but it was rejected by a vote of 344 to 384.

The ticket of the Prohibition party, whose convention was held at Waterloo, Aug. 21, was: For Secretary of State, W. W. Lawrence; Auditor of State, John W. Leedy; Treasurer of State, F. P. Fetter; Railroad Commissioner, E. H. Albright; Attorney-General, J. R. Ferguson; Judge of Supreme Court, J. A. Harvey; Clerk of Supreme Court, E. A. Graves; Reporter of Supreme Court, W. P. Briggs.

The platform declared that the convention "reverently acknowledged God as the author of civil government and Jesus Christ as the ruler of the nations of the earth, and that his law is the magna charta of human liberty, to which all legislation should conform."

The Socialist party met in State convention at Davenport, Sept. 2, and adopted a platform in which declared the purpose of the party to acquire for society the control of Government and the ownership of capital represented by mines, machinery, and all means of production and distribution. The following State ticket was nominated: Secretary of State, W. A. Jacobs; Auditor of State, T. J. Grant; Treasurer of State, S. R. McDowell; Attorney-General, I. S. McCrelia; Judge of Supreme Court, A. D. Pugh; Clerk of the Supreme Court, A. M. Larson; Railroad Commissioner, James Lorimer.

The Republican candidates were elected by a plurality of 79,214.

Republicans were elected to Congress in all the districts except the second, where M. J. Wade, Democrat, was elected by 1,188 plurality.

Louisiana Purchase Flag-Day.—Dec. 20 was set apart, by proclamation of the Governor, as Louisiana Purchase Flag-Day. This day was the ninety-ninth anniversary of the acquisition of the territory of the Republic of Louisiana by the United States, and it was proposed to observe it by a display of the flag on public buildings and business houses and dwellings if practicable.

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,980 square miles,
The population, according to each decennial census, was 107,206 in 1840; 364,390 in 1870; 706,096 in 1880; 1,427,096 in 1890; and 1,4,104,495 in 1900.

**Government.**—The following were the State officers in 1892: Governor, William E. Stanley; Lieutenant-Governor, Harry E. Richert; Secretary of State, George A. Clark; Treasurer, Frank Grimes; Auditor, George E. Cole; Attorney-General, A. A. Godard; Superintendent of Public Instruction, Frank Nelson; Secretary State Board of Agriculture, F. D. Coburn; Adjutant-General, S. M. Fox; Superintendent of Insurance, W. V. Church; Oil Inspector, S. O. Spencer; Grain Inspector, R. J. Northrup; State Printer, W. Y. Morgan; Bank Commissioner, Morton Albaugh; Labor Commissioner, W. L. A. Johnson; Members of State Board of Charities, Henry J. Allen (president), Edwin Snyder (secretary). All the elected officers are Republicans. Supreme Court—Frank Doster, Chief Justice; William A. Johnston, William R. Smith, Edwin W. Cunningham, Adrian L. Greene, Abram H. Ellis, and John C. Pollock, Justices (Judge Hite and Judge Burch were appointed on the Governor's recommendation). Provision was made for a Court of Appeals, of 6 members, to relieve the Superior Court of a portion of its work. The Court of Appeals expired by the expiration of the term in 1869. At the general election of 1890 a judicial amendment to the Constitution, providing for the increase of the membership of the Supreme Court to 7, was adopted, and the 4 additional members—Cunningham, Greene, Ellis, and Pollock—were appointed by the Governor. With the exception of the Populist Chief Justice, all are Republicans.

The State officers are elected in November of the years of even number. The Legislature meets biennially in January of the odd-numbered years. The session is limited to fifty days.

The State Tax Commission report shows the financial affairs of the State to be in good shape, the payment of taxes, fees, bonds, and interest being prompt and regular. The total delinquent on the 1st day of August (1892) are only $62,914.94, compared with $4,748.77 two years ago, and $164,835.88 four years ago. The total assessed valuation of property for 1892 was $339,853,397, an increase of $16,430,927 over that of 1890, and $363,728,557 over that of 1881. The State tax levy for the year was $51 mills, the same as for the preceding years. Property in Kansas is customarily assessed at from one-third to one-tenth of its actual value. This year a State Tax Commission, created by the last Legislature, drew up for presentation before the next Legislature a tax law designed to correct the inequalities of the present method of assessing property. The total appropriations made by the Legislature for the fiscal year ending June 30, 1892, amounted to $2,624,905.90. Of this amount, $2,238,493.61 was drawn, leaving unexpended $366,412.35. The entire bonded indebtedness of the State, amounting to $832,000, is held by the State school funds. On July 1, 1903, $220,000 of the State bonds will fall due, and on Jan. 1, 1904, $159,000. The Treasurer this year says that with reasonable prudence it will not be necessary to refund them, and recommends payment when due. In 1892, the State had a surplus of $10,938.18, which was applied to the payment of debt. For the fiscal year ending June 30 amounted to $3,585,350.19; disbursements, $3,545,609.33; leaving a balance of $267,706.85.

The semianual examination of the treasury, held Dec. 20, 1902, showed cash on hand to the amount of $241,283.50, distributed as follows: General revenue, $1,933.10; State-House, $251.07; State-House (completion), $4,000; livestock sanitary inspection, $2,285.05; permanent school, $11,385.82; annual school, $16,802.34; University permanent, $9.47; University interest, $1,352.50; Normal School permanent, $687.98; Normal School interest, $52.95; Agricultural College permanent, $365.49; Agricultural College interest, $1,281.74; insurance examination, 80; Stormont Library interest, $1,474.25; municipal interest, $1,472.84; State twine plant revolving fund, $1,212.448.68.

The bonded indebtedness of all municipalities in Kansas, comprising all securities outstanding issued by counties, cities, townships, boards of education, and school district boards, amounted, on June 30, to $32,614,000. Adding the indebtedness of the State, $532,000, the total is $35,266,000.

**State Property.**—The Auditor's estimate shows the property owned by the State to be worth $11,186,500. In this amount is included $1,000,000 of endowment funds of Union University, $1,225,000; Emporia Normal, $570,000; Manhattan Agricultural College, $1,083,000; Quindaro Industrial School, $21,500; Penitentiary, $1,584,500; Hutchinson Reformatory, $310,505; Dodge City Soldiers' Home, $108,000; Ellsworth Bickerdyke Home, $17,250; forestry stations at Dodge City and Ogallala, $5,415; Peabody silk station (unused), $2,500; Osawatomie Insane Asylum, $800,300; Topeka Asylum, $791,100; Parsons Asylum, $118,000; Topeka Reform School, $186,050; Winfield Imbecile Asylum, $138,000; Beloit Industrial School for Girls, $113,500; Atchison Orphans' Home, $183,000; Kansas City Blind School, $156,250; Olathe Deaf and Dumb School, $272,905; Fort Hays Experiment Station and Normal Farm, $14,688. The fees from the various departments collected for the fiscal year ending June 30, 1902, were: Oil Inspector, $19,944; Grain Inspector, $34,205; State Auditor, $4,631; State Treasurer, $2,534. The Clerk of Supreme Court, $14,133; Bank Commissioner, $8,688; stenographers, $2,715; Live Stock Sanitary Commission, $4,260; Normal School, $3,400; charter fees, $40,390; fees for examining insurance companies, $2,203; 2-cent. tax collected by State Superintendent of Insurance from insurance companies for distribution among the fire departments of the State, $153,625.

For the expenses of 1902 the last Legislature appropriated $2,624,905.90. The expenditures were $2,628,905.61, leaving a balance of $366,312.35.

There was turned back into the general fund $88,599.38 of the appropriation made for the completion of the State-House. The Adjutant-General turned back $21,292.40. The Agricultural College had a balance of $17,568.39 and the Penitentiary $38,000.

**Banks.**—The statement called for at the close of business on Nov. 25, 1902, showed that there were 47 banks doing business in Kansas. There were 47 State and private banks. The total deposits in all banks were $82,549,501.61; total loans and discounts, $67,700,842.65; total overdraws, $1,045,
033.45. The individual deposits in the national banks aggregate $30,537,098.01; in the State banks, $90,641,467.90. While there are more than three times as many State banks as national banks, the capital stock of the former aggregates only $7,751,000, compared with $9,255,500 for the latter. As to surplus funds the State banks have $1,768,703.56; the national banks, $1,675,086.56. It was expected that the November statement would show a decrease in deposits over the statement of the preceding September, but there was an increase in the State banks amounting to $75,856.91, and in the national banks $180,576.90. In the year 65 State banks were incorporated, and 10 national banks began business. The report of the Bank Commissioner shows that 85 State and 15 private banks have an unimpaired surplus equal to or greater than 50 per cent. of their capital. With but few exceptions these are in small towns, with good agricultural surroundings, their capital ranging from $5,000 to $50,000. There were no bank failures in 1902.

Insurers.—On Dec. 20, 1902, there were authorized to do business in Kansas 296 insurance companies: 70 life, 42 fire, 21 casualty, 20 mutual, 56 fraternal beneficiary. Four companies retired in the year: 2 fire, 1 mutual, 1 fraternal. Since June 1 one company entered, 1 mutual. The department issued to agents 10,595 licenses. Up to Dec. 20, 1902, the fees collected amounted to $255,461.35, of which $182,000 went to the general fund and $75,261 to the fund for distribution among the fire departments of the State, this fund being raised by a tax on the companies doing business in the State. The Insurance Department netted the treasury more than any other department of State work.

Education.—Kansas has a school population of 508,820 between the ages of five and twenty-one; total enrolment, 389,272. There are 9,106 schoolhouses and 11,709 teachers. The value of all school property is $18,003,324. The amount expended for education in 1902 was $6,171,295. Of this amount, $4,904,562.55 represents the total expense of the public schools. There was collected for the public schools for the year $6,505,240.11, which left a balance of $700,078.56. The permanent school fund amounts to $7,500,000, and the interest of this amount is distributed semiannually. The permanent fund of the State University has a fund of $200,000, the yearly interest amounting to $10,000. The fund of the State Agricultural College aggregates $500,000, and the interest is $20,500. These funds are increasing yearly as the result of the sale of land held in trust by the State for the schools. More than 500,000 acres of school land remain unsold. Compromises were effected with four of the far western counties whose delinquent bonds are held in the permanent school fund. A portion of the interest was remitted, and the rate lowered. The demand for school land is increasing. The Auditor's records show that in 1902 the land sales aggregated $178,427, and most of it was for the permanent school fund. The rentals for unsold school land for the year amounted to $20,790. A detailed statement of money paid out for education for the past year shows: Public schools, $4,904,562; county high schools, $1,007,705.00; business colleges, $252; shorthand and schools of telegraphy, $10,085; manual training schools, $6,155; medical schools, $8,000; Soldiers' Orphans' Home, $4,000; Industrial School for Boys, $2,752; Swedish Orphans' Home, $2,000; denominational schools (academies and colleges), $493,219; normal institutions, $6,500; State educational institutions, $314,432; federal educational institutions, $319,000; Young Men's Christian Association (educational work), $19,045; total, $6,171,295.

A statement of the value of all school property is: Public schools, $11,608,419; county high schools, $214,799; business colleges, $252; schools of telegraphy, $25,000; manual training schools, $19,296; medical schools, $60,000; Industrial School for Boys, $175,500; Industrial School for Girls, $110,300; denominational schools (academies and colleges), $2,768,100; private normals, $50,000; elocution and oratorical, $2,500; State educational institutions, $3,176,095; federal institutions, $292,100; total, $18,003,324.

There are but $3,101,899 in school bonds outstanding, of which $249,740 were issued in the past two years. During the same period 137 new schoolhouses were erected at a cost of $253,219. There are 3,823 women teachers and 3,304 men. The men receive an average monthly salary of $44.24; the women, $38.95. The average length of the school term is 23.15 weeks. The average levy of taxes for school purposes is 11.05 mills. Wyandotte ranks first in value of school property, $385,000. Haskell is the other extreme, $2,150. One county had 4.1 per cent. indebtedness whatever. In proportion to school population Kansas has a school enrolment larger than that of any other State in the Union. There are 25 counties in which women are superintendents of public instruction. Kansas ranks fifth among the States in percentage of persons who can read and write—49.48. Ten years ago it ranked fourth. Seven-tenths of the total school children enter high schools; only 6 per cent. go to college.

Kansas has 5 manual-training schools; 12 county high schools; 100 city high schools that prepare students for entrance to the State University; schools of telegraphy; 2 oratory and elocution; 2 music, 10; business colleges, 23 (in addition, some denominational and private schools also support business departments); medical colleges, 2; private normals, 3; denominational schools, 30; colleges and universities, 26; State educational institutions, 5; preparatory schools, 7; Young Men's Christian Association schools, 7.

The State University, at Lawrence, has 80 instructors; enrolment, 1,233; graduates last commencement, 14; endowment, about $145,000; expenditures for current year, $165,000; tuition, per annum, $10; for non-residents, $25; average total annual expense per student, $135; volumes in library, 37,584. The State Normal School, at Emporia, has 44 instructors; enrolment, 2,034; value of buildings and apparatus, $248,000; volumes in library, 15,000; expenditures for current year, $65,065.37. The Western Branch of the State Normal School, at Hays City, founded in 1902, has 3 instructors; enrolment, 70; land owned, 4,100 acres, valued at $80,000; value of buildings and apparatus, $6,900.78. The State Agricultural College, at Manhattan, has 63 instructors; enrolment, 1,396; land owned, 323 acres; value of buildings and apparatus, $494,708; endowment, $491,181.30; volumes in library, 21,103; pamphlets, 20,000; value, $53,625; total receipts for year, $73,747.35; total expenditures, $73,697.10; these colleges, $330,075; shorthand and schools of telegraphy, $10,085; manual training schools, $6,155; medical schools, $8,000; Soldiers' Orphans' Home, $4,000; Industrial School for Boys, $2,752; Swedish Orphans' Home, $2,000; denominational schools (academies and colleges), $493,219; normal institutions, $6,500; State educational institutions, $314,432; federal educational institutions, $319,000; Young Men's Christian Association (educational work), $19,045; total, $6,171,295.
ments have been made by the Government to cooperate with the State in experimental irrigation. The Elevator, the Agricultural College at Manhattan are the largest institutions of their kind in the world.

The Kansas Medical College, in Topeka, has 33 instructors; enrolment, 98; value of buildings and apparatus, $25,000; expenditures for year, $4,000.

Washburn College, Topeka, has 25 instructors; enrolment, 238; value of buildings and apparatus, $189,000; endowment, $75,000; volumes in library, 10,000; expenditures for year, $30,107.80. A well-equipped observatory, which will cost about $75,000, is in process of construction at Washburn.

Western University (industrial school for negro youth), at Kansas City, has 10 instructors; 4 lecturers; enrolment, 103; value of buildings and apparatus, $40,000; expenditures for year, $7,000.

Topeka Industrial and Educational Institute (for negro youth) has 9 instructors; 2 lecturers; enrolment, 134; value of buildings and apparatus, $10,325; expenditures for year, $3,655.36; supported by donations.

Hill School at Lawrence (federal), has 66 instructors; enrolment, 891; land owned, 1,000 acres; value of buildings, $250,000; expenditures for year, $312,900.

Traveling Libraries.—The traveling-library department of the State Library contains more than 10,000 books, having doubled the number in the past two years. Libraries to the number of 120 Indian and 1,500 local libraries contain 50,000 books, made up in any manner to conform to the orders sent in. The majority of them are sent out to schools, both in cities and rural districts. In many instances these traveling libraries lead to the establishment of permanent ones in the communities that use them. The heartiest reports in their favor come from county districts and small towns. The State appropriation is $4,000 annually, $3,000 of which is to be used in the purchase of new books. Frequent calls are made for these libraries from study clubs. 

The State Penitentiary.—Besides the 8 institutions directly under the control of the Board of Trustees of State Charities and Corrections, there are 28 independent charities that receive State appropriation, the value of the property from $300 to $2,000 a year. One, the Kansas Children's Home Society, receives $2,000; another, the Kansas Industrial and Educational Institute for Colored Youth, receives $1,500; 15 receive $700, and the others from $300 to $2,000 per year. Reports made by 25 of these concerns show 1,138 inmates and patients, and buildings and property valued at $456,300.

The Topeka State (insane) Hospital has 1,258 inmates; expenditures for fiscal year ending June 30, 1902, $180,717.04. The Oswatattit State (insane) Hospital has inmates, 1,094; officers and employees, 172; expenditures for the fiscal year, $150,217.09.

The School for the Deaf, at Olathe, has inmates, 230; officers and employees, 42; expenditures for the fiscal year, $47,790.31.

The School for the Blind, at Kansas City, has inmates, 105; officers and employees, 21; expenditures for the fiscal year, $22,986.50.

The Soldiers' Orphans' Home, at Atchison, has inmates, 257; officers and employees, 41; expenditures for the fiscal year, $32,429.20.

The State School for the Feeble-Minded, at Topeka, has inmates, 109; officers and employees, 35; expenditures for the fiscal year, $41,887.20.

The Girls' Industrial (reform) School, at Beloit, has inmates, 123; officers and employees, 20; expenditures for the year, $28,563.54.

The School for Feeble-Minded, at Winfield, has inmates, 288; expenditures for the fiscal year, $48,553.54.

The School for the Feeble-Minded and the asylums at Topeka and Oswatattit are sadly overcrowded, unable to receive patients that are held in private asylums. At Parsons a third asylum is in course of construction. It is being built with especial reference to the care of epileptics. All patients of this kind will be assembled there. Provision was made by the last Legislature for inspection of the poorhouses, jails, and lock-ups of the State by members of the Board of Charities and Corrections. Reports made by the inspectors show that in nearly all instances the inmates of the poorhouses are comfortably clothed and well fed, but in many instances the quarters are poor and the conditions unsanitary in the extreme. Many buildings were found unfit for use, but the law gives the inspectors no power to condemn. Some of the oldest and wealthiest counties in the State have the meanest and worst-kept poorhouses. In a general way, the inspectors reported that the State is a disgrace to civilization, many of them being both unsanitary and unsafe.

The State Industrial Reformatory (for boys), at Hutchinson, has 291 inmates; 43 officers and employees; total value of all property, $503,491.22; total expense for the fiscal year, $90,370.93.

The State Penitentiary has 1,089 inmates; 85 officers and employees; the appropriation for the last fiscal year was $179,300; balance of appropriation unexpended, $10,91; total cash earnings, $50,940.76; cash expenditures over cash receipts, $128,350.24. Against this excess of cash expended over cash received are set earnings to the amount of $110,280.11, for which no cash was remitted, leaving a debit balance against the Penitentiary of $17,070.13. In 1902 the Penitentiary mine furnished the various State institutions with 70,315.05 worth of coal and $13,231.84 worth of brick. The Penitentiary plant is furnishing all the brick that will be needed for the new Parsons asylum at a cost of a trifle more than $2 a thousand. In the warden's judgment it has been demonstrated that the process of building the plant has been successful. In the year the plant turned out 1,101,690 pounds of twine; cash sales amounting to $105,521.58. In September the plant paid the State the $115,000 due on the revolving fund, the $150,000 which was appropriated to start the plant, making said fund whole, the balance then on hand being $22,713.41, in cash and raw material. Aside from the financial success, the plant is considered as of special value in keeping the price of twine made by the trust below an exorbitant figure.

Less than 6 per cent. of the prisoners released under the terms of the parole law violated the conditions under which they received liberty.

**Products.**—In 1902 Kansas, in common with other States of the West, suffered considerably from long-continued dry weather. In 1902 the farmers' principal trouble was caused by floods in Kansas streams that were greater than any that had occurred in many years. One result was that the yield of wheat was cut down materially, and the quality of what was raised was injured in great degree, but the yield of corn was the greatest in the State's history.

The yield of winter wheat was 54,323,830 bushels. Its home value is given as $28,083,943.60.
The area sown, as returned by township assessors in March, was 6,254,474 acres. The area reported sown for next year’s crop is 6,090,105 acres, being a decrease of 234,364 acres, or 3.7 per cent, below last year’s sowing, which was much the largest ever reported. The shrinkage in spring-wheat sowing, so conspicuous annually of late years, is greatly mitigated by evidence this year, with but 46,293 acres, and a yield of 325,397 bushels, worth $155,545.57.

The corn area was 6,990,764 acres (which includes the 5,619,500 acres reported by assessors, plus 1,071,174 acres of the plowed-up wheat-land first planted to corn) and yielded 201,367,102 bushels, worth $78,321,052.28.

The yield of oats was nearly 60 per cent. greater than last year, or 32,906,114 bushels, the largest yield since 1892.

The yield of potatoes, on a conspicuously diminished area, 60,018 acres, was 8,193,632 bushels, the largest and best crop by far since 1899, with a value of $3,180,856.71.

The net increase in value of this year’s agricultural production over that of 1901 is $20,014,343; and of live stock $2,099,680. In two years the increase in value of agricultural productions has been $25,072,588, and of live stock $11,049,059.

The wheat crop increased over the values of three years before amounts to $80,071,029.

The quantity of old corn in the hands of farmers on March 1 was 7,724,942 bushels. The year before it was 10,124,589 bushels, and two years before 48,255,677 bushels. The quantity of old wheat in farmers’ hands March 1 was 9,664,598 bushels. The year previous 7,966,555 bushels, and two years previously 4,624,858 bushels.

Other products of 1902 are: Rye, 3,728,269 bushels, valued at $1,884,321.31; barley, 2,183,873 bushels, valued at $801,381.88; buckwheat, 2,770 bushels, valued at $2,216; castor-beans, 4,400 bushels, valued at $5,500; cotton, 136,000 pounds, valued at $6,200; flax, 1,432,876 bushels, valued at $1,713,570; hemp, 10,200 pounds, valued at $610; tobacco, 15,150 pounds, valued at $1,615; broom-corn, 16,584,205 pounds, valued at $405,640; olive, Hungarian milled, 400,100 bushels, valued at $74,482; pigeon pea, 1,700 bushels, valued at 200 gallons, valued at $685,114; value of asparagus, Kafr corn, milo maize, and Jerusalem corn for forage, $12,378,894; tame hay, 803,934 tons, valued at $401,467; wheat straw hay, 1,920,637 tons, valued at $3,282,548; wool-clipp, 472,427.50, valued at $97,114.05; cheese, butter, and milk, $8,412,217.65; poultry and eggs sold, $6,706,262; animals slaughtered or sold for slaughter, $21,340,589; horticultural and garden products and wine, $1,905,550.50; honey and beeswax, 405,150 pounds, valued at $800,351.20; wood marketed, $186,150; total value of products, $215,998,995.

Railroads.—Kansas has 8,753.55 miles of main track, and 1,636.25 miles of sidings. The assessed valuation of all railroad property is $90,276,209.

In 1902 two branches were constructed by the Missouri, Kansas and Texas in the southeastern portion of the State; one from Moran to Iola, the other from Mineral Junction to Joplin, their aggregate length being about 37 miles. The Kansas-Southwestern, a line 59.35 miles long, from Cale Junction to Anthony, became the property of the Santa Fe. The Kansas and Southern, an 87-mile line in Indian territory, connecting Westmoreland with Blaine, on the Leavenworth, Kansas and Western, operated independently, went into the hands of receivers in the fall. The Kansas City, Pike, and Chicago, chartered in May, 1900, to build from Kansas City to Fort Stillwell, on the west coast of old Mexico, has in operation a portion of its line, south from Anthony, in Harper County, into Texas. Grading has been done for a portion of its road-bed in Lyon County. In November preparations were begun on an electric line to connect Wichita with McPherson. Surveys had also been completed for an electric line from the valley of the Kaw, connecting Kansas City, Mo., and Topeka. Only 5 of the 105 Kansas counties, and but 7 county seats, are without railroad communications.

National Guard.—The Legislature of 1901 passed a militia law, and the organization of the National Guard of the State is made to conform as closely as possible to the organization of the regular army. The membership of the National Guard is: Officers, 126; enlisted men, 1,232. There are 2 regiments of infantry, and an artillery battalion. All equipment required by the organized militia of the State is supplied by the United States to the amount of $21,241.82 annually. This equipment remains the property of the United States, the State being held to close accountability. The value of the property for which the State of Kansas is responsible at the close of the fiscal year ending June 30, 1902, is: Ordnance and ordnance stores, $42,020.72; quartermaster’s supplies, $55,759.01; aggregate, $97,779.73. This equipment consists of two old Napoleon smooth-bore, muzzle-loading field-guns have been discarded, and the artillery is now equipped with 4.3-inch breech-loading steel guns. The infantry is equipped with the Springfield rifle. The militia took part in the military maneuvers conducted by the regular army at Fort Riley in September, the Legislature having made an appropriation for an annual muster, and on being invited to do so, the militia men participated with the regulars in their mimic war. For the maintenance of the National Guard for the fiscal years ending June 30, 1904, and June 30, 1905, the Adjutant-General recommends that the Legislature make an appropriation of $60,040.

Free Employment Agency.—December closed the twentieth month for the State Free Employment Bureau established by the last Legislature (1901). In that time 4,694 applications for work were received, of which 5,971 were supplied. It is believed by the office that 1,640 were not filled by reason of the applicants being wanted for work in the State.

The wages offered were largely in excess of the ruling rates during previous years, yet men could not be obtained from any source. The total figures, as shown by the director’s consolidated report, are: Work and help desired, 6,687; furnished, 4,937; not secured, 1,750. The State employment agent works in connection with the clerks of cities of the first and second class, the clerks receiving no additional remuneration for this work. All books and blanks are furnished by the State, the clerks furnishing a room in which to do the business. No charges are made to those seeking employment. In 1902, 1903, and 1904, the income of the office, a large number of the most part, housemaids and common laborers have benefited in greatest degree by the new law, although it is planned for all classes.
work. The matter of seeing that the law is obeyed is in the hands of the State Labor Com-
mmissioner. The first decision of the law by taking 9 cases into court—the same number as last year. In 55 cases the law was enforced without litigation; about one-fourth of the number of new cases settled in this manner to date with it in the previous year; but the number of men affected by the decisions was about 5,000, against one-
fifth that number in the previous year. Several cases this year involved large numbers of men. In several instances the State Labor Commis-
sioner acted as a mediator in disputes arising be-
tween workmen and employers, and affected amicable settlements. The year was marked by a great increase in the strength and extension of labor-unions, the number growing from 337 to 396, the new unions and the increases in the old ones making the total number of members greater by 17,000.

Antiliquor Work.—Mrs. Carrie Nation, the erratic Kansas woman who in 1901 began a spec-
tacular campaign against liquor in Kansas, smashing several bars herself, after being re-
leased from jail in Topeka in the early part of the year, set out on a lecturing-tour, and ap-
ppeared in the camps in the field. She returned to Topeka in November, and the day after her ar-
ival created a disturbance on the street and was promptly placed in jail, in default of pay-
ment of the fine imposed, whereupon she returned to her old plan of writing letters to newspapers, denouncing officials, from President Roosevelt down to the police judge of Topeka, for what she termed the contumancy in the liquor traffic. After eleven days in jail she was released, where-
upon she immediately began to hold meetings again, and to work on the organization of a new political party, its object being the suppression of the liquor traffic.

An investigation following the November elec-
tions, made by the State Temperance Union, re-
vealed that in 36 out of 62 counties reporting the enforcement of the prohibitory law was an issue in the campaign, while in 40 it was not. Announcement was made by the union that an aggrieved party could appeal to the Supreme Court for the purpose of winning the spring municipal elections.

More than ordinary interest was manifested in the work with regard to the prohibitory law during the year, partly because of the fact that in Topeka, always the head and center of the work for prohibition, a Democrat was seated as mayor after a contest case had been carried to the Supreme Court, and open saloons were al-
lowed to run in the capital city on payment of a monthly "fine"—a plan followed in practically all the larger towns of the State and in many of the smaller ones, but which was new to Topeka.

Legal Decisions.—In the case of The Atchison,
Topeka and Santa Fé Railway Company v. The Kan-
sass City, Mexico and Orient Railway Com-
pany (not yet reported) the Supreme Court held that "one railway corporation may, under the general statutes of eminent domain, condemn for its right of way real estate belonging to an-
other corporation not in actual and necessary use for railway purposes."

In the Consolidated Electric Light and Power Company v. Daniel Healy and Co. (not yet reported) the court said in its syllabus: "It is the law of this State that one who maintains on his pre-
isses what is called an "attractive nuisance," that is, a place wherein to those of ordinary knowledge and prudence, is so enticing to others excusably lacking in intelli-
gencc and caution as to induce them to venture to it, is liable for resulting injuries to the latter; and the same rule of liability applies if the person on his own premises a dangerous instrumentality not in itself attractive, but placed in such im-
mediate proximity to an attractive situation on the premises of another as to constitute a danger to the one and not of itself dangerous,"

Rural Free Delivery.—At the beginning of the year, 539 rural free-delivery routes were in operation in the State, the carriers' monthly wages amounting to $15,387.96. By the end of the year there were in operation 652 routes, the December payment of carriers' wages being $33,-
000. There were pending 417 applications for new routes, and 94 reports were awaiting the action of the department in December.

Political.—State elections are held in Kansas in the even-numbered years. Six tickets were placed in the field in 1902: Republican, Demo-
cratic, Prohibition, Socialistic, and Populist. The Democratic forces represented the old-line Demo-
crats and the great majority of the old Populist party. For the first time in Kansas these two organizations went into the field under a single ticket heading on the Australian ballot. This was made necessary by the passage of a law by the Legislature of 1901 prohibiting the use of the names of any candidates from appearing under more than one ticket heading on the ballot. It had been the practise for the Democrats and Populists to nominate the same candidates, run-
ing them under both "Democrat" and "Demo-
cratic" headings. Both parties held their con-
ventions as usual, but by agreement there was a division of offices, and it was decided to call the fusion forces "Democrats." This action marked the death of the once dominant Popu-
list party in Kansas. The original Democrats met in convention at Wichita, on May 22, and nominated their portion of the ticket as follows: For Justice of the Supreme Court, two-year term, John C. Cannon; six-year term, J. D. McClure; Governor, W. H. Craddock; Secre-
tary of State, C. H. cedar; Auditor, W. W. Lewis; Superintendent of Instruction, William Sense. Mr. Sense withdrew and his place was taken by William Stryker. The Democrats passed resolutions in which they reaffirmed their faith in the national platform of 1900; denounced trusts, and declared the Republican party was responsible for them; denounced the Republican Legislature for passing the ballot law making it impossible for a candidate to have his name in more than one place on the ballot; favored re-
form in the tax laws of the State, and such changes in the law as would reach trusts and monopolies and give to municipalities the right to determine as to methods of taxation respecting local matters; declared for the owner-ship and operation of all public-service functions by and in the control of the people; declared in favor of electing a Legislature free from "rail-
road domination"; declared in favor of legisla-
tion prohibiting railroad passes; approved the position taken by the Democratic members of Congress with respect to the duty of the United States toward the Philippines; condemned the "official action and inaction" of the Republican administration for "cowardly dodging" on the Kansas prohibitory question; declared in favor of resubmitting the prohibitory amendment to a vote of the people.

On June 24 the Populist wing of the party met in Topeka and completed the ticket by nomi-

UNITED STATES OF AMERICA. (KANSAS) 781
tang: For Justices of the Supreme Court, six-year terms, Edwin S. Waterbury and Benjamin F. Mil- toton; nine-year terms, Nathan H. Clowers; Lieutenant-Governor, Fred J. Close; Treasurer, David H. Heffebower; Superintendent of Insurance, Dan Hart; Congressmen at Large, Jeremiah B. Botsford, S. B. Hefley, and E. J. Bonar. The resolutions passed in which they reaffirmed the principles of the last national platform; demanded initiative and referendum as necessary to secure needed legislation in the interests of producer and laborer and to correct abuses; demanded the enactment of a primary election law by means of which fair expression of opinion in selecting candidates might be secured; approved the declaration of the Democratic State platform in regard to trusts, taxation of corporations, public ownership, and passes; denounced the Republican party for "subserviency to trusts and combines," and its maintenance of an "unnecessary and burdensome tariff on lunch-made goods"; and for its refusal to give promised relief to Cuba by reducing sugar tariff; denounced the tariff law passed by the Republicans; criticized the Republicans for failure to provide a railroad commission elected by popular vote; denounced the extra session of the Supreme Court which he charged was "not National but in the hands of the Republican Legislature in 1901"; demanded that railroad property be assessed at as high rate as the property of "natural citizens"; favored graduated taxation, State Insurance, and the reduction of the extravagant expenditures for public printing by the installation of a plant owned by the State; demanded, on the part of the next Legislature, a rigid examination of all the books followed by the American Book Company in introducing its publications into the schools; deposed the death of President McKinley, and demanded legislation to stamp out the "whole viperous brood of murderous anarchists" in the United States.

On May 25 the Republicans met in State convention in Wichita, and nominated: For Justices, six-year terms, H. F. Mason, J. C. Pollock, A. L. Greene; four-year term, A. H. Ellis (Justice Ellis died on Sept. 25 and his place on the bench filed by A. D. Burch, whose name was also placed on the ticket instead of that of Justice Ellis); two-year term, E. W. Cunningham; Governor, W. J. Bailey; Lieutenant-Governor, D. J. H. Hansen; Secretary of State, J. R. Burrow; Treasurer, T. T. Kelly; Auditor, Seth G. Wells; Attorney-General, C. C. Coleman; Superintendent of Instruction, Insley L. Dayhoff; Superintendent of Insurance, Charles H. Luling; Congressman at Large, Charles F. Scott. The Republicans passed resolutions in which they reaffirmed adherence to the national platform of 1900; mourned the death of President McKinley and demanded early passage of law for protection of Presidents from similar assaults; heartily approved the administration of President Roosevelt, and pledged him support for nomination in 1904; declared in favor of liberal pensions for soldiers of the civil war, their widows and orphans; condemned the attacks made on the army in the Philippines; approved the efforts of the administration to enforce the Sherman antitrust law; reaffirmed faith in a protective tariff, and recommended such reciprocal relations as would open new markets without interfering with home industries; approved legislation barring Chinese immigration; approved abrogation of the Clayton-Bulwer treaty; and condemned the "government's" non-intervention in Cuba. The Prohibitionists nominated: For Governor, F. W. Emerson; Lieutenant-Governor, W. Buffing-
UNITED STATES OF AMERICA. (KENTUCKY.)

Ray: Attorney-General, R. J. Breckinridge, succeeded April 1 by Clifton J. Pratt; Superintendent of Education, H. V. McChesney; Commissioner of Agriculture, J. B. Chenault; Chairman of the Railroad Commission, C. C. McChord; Prison Commissioners, J. M. Richardson, E. Fennell; State Inspector, H. B. Hines—all Democrats but Pratt; Chief Justice of the Court of Appeals, T. H. Paynter, Democrat; Associate Justices, J. D. White, Democrat; George DuRelle, Republican; A. Roling Burnam, Republican; B. L. D. Guffy, Republican; J. F. Hobson, Democrat; E. C. O'Rear, Republican; Clerk, S. J. Shackleford, Democrat.

The term of office of State officials are held in November of the years next preceding presidential elections.

The term of office is four years. The Legislature consists of 38 Senators and 100 Representatives, and is required to meet after the first Monday of January in even-numbered years.

Education.—The number of illiterates in the State, according to the census of 1900, was 202,- 914; the average age of pupils between ten and fourteen years of age who were able to read and write was 91.56. In 1890 it was 85.17. Relatively, Kentucky occupies about the same place on this account that it has long been one of the principal streets, July 17. Another was lynched at Russellville in August for assault and murder—his victim a girl sixteen years old, daughter of his former employer, with whom he had run away.

On Feb. 12 a battle was reported at Middlesboro between officers and mountaineers. The officers were trying to arrest a saloon-keeper. In the fight the saloon was burned. The number of the dead was supposed to be at least 6. The saloon was notorious for the number of men that had been killed there—53 before the fight in February.

Under the title "Race War," an account was given in March of an occurrence at Madison Bend in which 2 negroes were shot and 3 were beaten almost to death. Their offense was stealing chickens.

Election Frauds.—Two men were convicted in the federal court at London, in November, of gross frauds committed in Lexington at the November election of 1890; and 3 others were indicted by the London Grand Jury on similar charges in Louisville in the election of 1902. They were charged with violation of the federal election laws in regard to registration. During the congressional registrars met in June and refused to allow a number of colored voters to register because of their Republican affiliations.

Legislative Session.—The General Assembly was in session from Jan. 7 to March 12. N. W. Utley was president pro tem. of the Senate, and Gerald Finn was Speaker of the House. There were 26 Democrats in the Senate and 74 in the House: 12 Republicans in the Senate and 25 in the House.

The House adjourned Feb. 3, on motion of a Representative, who said: "Mr. Speaker, I move that this house now adjourn out of respect to the memory of Gov. William Goebel, who died and passed to heaven two years ago to-day."

The Senate also adjourned.

The power of appointment of the legal assistant for the Attorney-General was taken from the Attorney-General and given to the State Auditor. The courts had decided that Clifton J. Pratt, Republican, was the rightful claimant of the office of Attorney-General, then held by R. J. Breckinridge, Democrat. The Auditor announced that he would reappoint Breckinridge's assistant.

The right to vote in school elections in sec-
ond-class cities was taken from women; but they have the right to serve on school boards.

The law regarding the sale of the dower rights of intestate women was amended.

The charters of cities of the second, fourth, and sixth classes were amended. It was provided that the State shall pay its proportion of the cost of improvements of streets in cities of the second class.

A free public library in Louisville was provided for, enabling the city to accept the Carnegie offer of $200,000. The establishment of libraries in cities of the second class was provided for; and the creation of a free-library commission.

The office of Inspector of Labor, with a salary of $1,200, was created.

Mine operators are required to pay employees once in two weeks, instead of once a month.

A new revenue law was enacted. The so-called "McCain" tobacco law was repealed; as was also the law allowing county judges, on petition of citizens, to call out guards to protect property from mobs.

A bill was passed to protect wild birds and their nests. It does not refer to game-birds. A bill was passed, also, to prohibit the docking of horses' tails, but it was vetoed on the ground that it would interfere with the sale of Kentucky horses in the East, and that the statute on cruelty to animals, if enforced, would prevent the practice if it could be shown to be cruel.

A bill requiring the certificates of registration to be issued to voters in cities and towns of Kentucky without presentation of which at the polls on the day of the general election no such voter could exercise his right of suffrage was passed in the lower house and signed there, but was reported to have disappeared without reaching the Senate.

The double-liability clause of the statute on corporations was repealed. The new law relieves all corporations from double liability on its stock save banks, trust companies, and insurance and investment companies.

The life-insurance laws were amended so that policies shall have a cash surrender value only after the third annual premium has been paid. There are four classes of insurance companies for investments of accumulations was enlarged.

Among the appropriations were $17,000 annually for the State militia; $15,000 for improvement at Forts Sumter, Porter, and Totten; $20,000 for improvements at Eddyville prison; $10,000 for the Children's Home Society; $110,000 for the Eastern and Central Asylums, and $60,000 for the Deaf-Mute School, at Danville; $2,000 for a monument over Confederate graves at Perryville; $15,000 annually for the State fair; $16,000 for the colored normal school at Frankfort, the name of which was changed to the Kentucky Normal and Industrial School.

Other measures passed were: Providing for the maintenance of a Confederate home by the State. Ceding to the Government jurisdiction over certain land in Boyle County for the establishment of a military park at Perryville.

Providing for the erection of levees along the Ohio river by ceding to the United States Government jurisdiction over certain land.

To suppress "blind tigers."

Making the first Monday in September, Labor Day, a legal holiday.

Making abduction for ransom a felony.

Making attempted rape a felony.

Fixing $100 as the per capita for inmates of the House of Reformation.

Creating a board of examiners for barbers in cities of the first, second, and third classes, and requiring an examination by the board before a certificate is issued allowing the practise of the trade. The bill has also provisions for the inspection of barber shops for the purpose of preserving sanitary conditions.

Authorizing the legal voters of a county to vote a tax for extension of the common-school term.

Political.—The contest for the minor State offices that arose from the disputed election when Goebel and Taylor were the candidates for Governor was ended this year by the decision that Clifton J. Pratt, the Republican candidate for Attorney-General, had been legally elected. Mr. Pratt, who had been compelled by a former decision to give up the office to R. J. Breckinridge, the Democratic candidate, took possession of the office again April 1.

At the November election the Democratic candidates for Congressmen were elected in all the districts except the Eleventh, where Vincent Boreing, Republican, had 8,013 plurality. Justices Guffy and DuRelle, of the Court of Appeals, were defeated by the Democratic candidates, W. E. Settle and H. S. Parker.

The eligibility of Gov. Beckham, under the State Constitution, to succeed himself has been questioned; but a bill has been introduced that would have agreed that he is eligible and he has announced his candidacy for the nomination at the Democratic primary to be held May 9, 1905. The action of the State Committee in calling the primary was strongly opposed by a section of the party, and proceedings were taken to serve an injunction.

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,730 square miles. The population, according to each decennial census since admission, was 162,923 in 1820; 215,739 in 1830; 362,411 in 1840; 517,726 in 1850; 708,002 in 1860; 726,915 in 1870; 939,946 in 1880; 1,118,587 in 1890; and 1,381,625 in 1900. Capital, Baton Rouge.

Government.—The following were the State officers in 1902: Governor, William W. Heard; Lieutenant-Governor, Albert Estopinal; Secretary of State, John T. Michel; Attorney-General, Walter Guion; Treasurer, Ledoux E. Smith; Auditor, W. S. Fraze; Superintendent of Education, J. V. Calhoun; Adjutant-General, Allen Jumel; Commissioner of Agriculture and Immigration, Jordan L. Crump; Commissioner of Public Instruction, C. A. Davis; Commissioner of Prisons, L. G. Lee; Railroad Commissioner, C. R. E. Jackson; Inspector of Banks, W. L. Foster, Overton Cade; Registrar of the Land Office, J. M. Smith; Chief Justice of the Supreme Court, Francis T. Nicholls; Associate Justices, Newton C. Blanchard, Joseph A. Breux, Frank A. Monroe, O. O. Provosty; Clerk, T. McC. Hunman. All are Democrats.

The term of the State officers is four years; they are elected in April of the years of presidential elections. The Legislature meets biennially in May of the even-numbered years; the length of the session is limited to sixty days.

Finances.—The Treasury transactions for 1900-'01 are summarized as follow: The total receipts from all sources, including cash balances on hand and transfers, for 1900, to Dec. 31 of that year, are $5,549,274.84. The total disbursements for all purposes for the same period, $4,243,583.31; balance, $1,305,691.63. The gross receipts for the year 1901 and cash balances on hand aggregated $5,188,733.49; the disbursements, $4,975.75. The total receipts in 1902 were $4,150,067.60, and the balance on hand $1,392,047.37.

The Treasurer's report says the gross receipts to the general fund for 1900 amounted to $329,630.00, while the expenses of the general fund for the
same period were $1,055,717.04, an excess of expenditures over receipts of $120,686.22. This was promptly met by a borrowing to the credit of that fund, amounting to $214,433.80.

In 1901 the receipts of the general fund were $1,015,499, while the expenses were $575,964.37, showing an excess of $149,534.83.

Since the organization of the Pension Board in 1898 there have been 1,871 beneficiaries, and $175,000 has been paid out.

The total of State assessments for 1902 was $315,583.48. For 1901 it was $301,215.22.

The official schedule of appraisement of railroads, telegraph, telephone, express companies, etc., in the State, shows a net increased assessment of approximately $2,000,000. This increase is almost wholly made up of new lines and actual increased values.

Education.—The number of illiterates in the State ten years of age and over was 381,145 in 1900. Of these, 284,028 were negroes and 566 Indians and Chinese. In the percentage of persons from ten to fourteen who were able to read and write, Louisiana stood near the head of the list of the States, with 67.12 per cent. It is pointed out that there are three facts which explain the proportion of illiteracy in the State: First, the large negro population; second, the fact that in the southern part of the State a majority of the population speaks a foreign language, and is therefore difficult to reach through the public schools; third, the large proportion of children compared with adults and wage-earners.

In 1901 the total enumeration of school-children in the State was 404,757, and the enrolment in the schools 190,936. The demand for 1901, including balance on hand, amounted to $1,396,892, and expenditures $1,236,647.57. For 1902 it was estimated that the apportionment of $1 mill for the schools would yield $475,000, to which are to be added the interest on sixteenth sections, amounting to $62,838, which, with the proceeds from the poll-tax and the local taxes for schools, aggregate about $1,500,000. This sum when prorated among the 404,757 children of educable age, gives a per capita of $3.70. Prorated among the 186,896 children enrolled in the public schools, the per capita is $5.80.

The number of pupils in Catholic schools is given as 23,386.

The Peabody Normal School, at Alexandria, reported pupils in 1901, including balance on hand, amounted to $1,396,892, and expenditures $1,236,647.57. For 1902 it was estimated that the apportionment of $1 mill for the schools would yield $475,000, to which are to be added the interest on sixteenth sections, amounting to $62,838, which, with the proceeds from the poll-tax and the local taxes for schools, aggregate about $1,500,000. This sum when prorated among the 404,757 children of educable age, gives a per capita of $3.70. Prorated among the 186,896 children enrolled in the public schools, the per capita is $5.80.

The Rice College of the State in 1901-92 was given in September as 880,000 bales. There were 6 cotton-mills, with 1,029 looms and 66,652 spindles, consuming 18,017 bales.

At a meeting of citizens interested in the production of sugar, at New Orleans, in January, a protest was adopted against the proposition to remit the duties on sugar brought in from Cuba.

The rice-crop of Louisiana and Texas, in 1901, was estimated at 3,250,000 bags of which Louisiana probably produced 2,720,000 bags and Texas 530,000. The estimated production of the two States, 1902, was 3,100,194 bags.

The census bulletin gives the number of farms in Texas, in 1900 as 115,918, and of Nebraska, 9,115, the State industrial schools at Ruston and at Lafayette, the Louisiana State University and Agricultural and Mechanical College at Baton Rouge, the Southern University at New Orleans, the Institute for the Deaf-Mutes and for the Blind at Baton Rouge, are maintained by the State, save the State University, at Baton Rouge, which is maintained by the State and the United States jointly. Tu- lane University, at New Orleans, is liberally aided by the State by means of the exemption of its rent-bearing property from taxation. The Legislature of 1902 appropriated the sum of $175,900 for new buildings, repairs, additions, equipments, etc., for the Institute for the Blind, the State Normal School, the industrial schools at Ruston and Lafayette, and the State University, at Baton Rouge.

Conclusively, the average distribution of the convicts in 1901 was: Within walls, 105; at Angola, 653; at Hope, 184; at levee camps, 320; total, 1,039.

The value of farm property was $198,536,906 in 1900 and $110,447,005 in 1900. Of the owners of farms in the census year 36,255 were white and 8,400 were colored. Of the tenants, 18,531 were whites and 48,703 were colored. In 1900, 21.2 per cent. of the total acreage was operated by colored farmers, while less than 10 per cent. was actually owned by them. The average of corn to the acre in 1902, by the preliminary estimate, was 12.5; the average for ten years, 16.4.

The growth in the value of mill-products was from $67,806,713 in 1890 to $121,181,683 in 1890.

The leading industry of Louisiana is the manufacture and refining of sugar and molasses. The 384 establishments reported in 1890 gave employment to 6,504 wage-earners, or 15.4 per cent. of the wage-earners employed in the State, and the products were valued at $47,801,091, or 39.5 per cent. of the total value of the products of the State.

The manufacture of lumber and timber products ranks second in importance, with 432 establish-
ments, 10,171 wage-earners, and products valued at $17,405,513.

The manufacture of cottonseed oil and cake holds third place among the manufacturing industries of the State. There were 24 establishments in 1800, with 1,317 wage-earners and products valued at $7,292,652. The refining of cottonseed oil is a branch of the industry recently established in New Orleans.

Lawlessness.—Two negroes were lynched in West Carroll Parish, in January, for the murder of a police juror who attempted to arrest them for stealing from him. Another negro murderer was lynched in Vidalia, March 19. Near Cocoa, in June, a negro was hanged by a mob for criminal assault, and another for the same crime near Homer, Aug. 7.

A street-car strike in New Orleans in October was attended with rioting and bloodshed. The entire National Guard of the State was called to the city.

Legislative Session.—The Legislature was in session from May 12 to July 10. J. Y. Sanders was Speaker of the House.

The nominations of Justices Provery and Breaux to succeed themselves were confirmed. Bills of organization of 4 and 7 congressional districts of the State into 7 congressional districts, the State being entitled to one more Representative by the last census. The legislative districts also were redivided.

A revenue bill passed with the following provisions: Providing for an attorney of the Board of Assessors in New Orleans; depriving the boards of review of assessments of the power of cutting down assessments; providing for the taxation of standing timber owned by a person other than the landowner; providing for the redistribution of the 6-mill tax, which, on an assessment of $301,000,000, will yield revenues as follow: General fund, 11 mill; $451,500; school fund, 12 mill, $451,500; interest tax fund, 2 mills, $602,000; engineer fund, 1 mill, $301,000. There is an additional provision that a sum equal to one-eighth of 1 mill shall be transferred from the surplus in the general fund to the school fund, which will bring that fund up to $491,125.

A revenue bill was passed affecting New Orleans only, but important in its provisions. It gives to the voters in general the management of the fund for the sewerage and water-supply. A 12-mill tax in the city put up this fund, amounting to about $14,000,000, and voted that the handling of the money should be put into the care of the Drainage Commission, to which should be titled the property taxpayers, to be appointed by the mayor.

The bills affecting New Orleans were, besides the merger bill, an appropriation of $200,000 for a court-house; an act allowing cities to anticipate their revenues for ten years; changing the date of the city election to November 10, 1904, and every fourth year thereafter; providing for the succession of the city to the property of the Drainage Commission, of a firemen's pension fund, by using as a nucleus 1 per cent. of the city licenses collected; and the constitutional amendment elsewhere mentioned, enabling the city to fund $500,000 of certificates invalidated by a court decision.

Other acts were:

For an exhibit of Louisiana's resources at the Louisiana Purchase Exposition, making an appropriation of $100,000.

Making an appropriation to celebrate the centennial anniversary of the transfer of the territory of Louisiana to the United States at New Orleans in December.

To establish an insane asylum for colored persons, and making an appropriation of $100,000 for it.

To provide substantial artificial limbs for the citizens of the State who lost a limb or limbs in the military service of the Confederate States.

Among the larger appropriations were: Expenses of the General Assembly, $20,000; State printing, two years, $70,000; public schools, $450,000; constructing and repairing levees, $300,000; interest consolidated bonds, $435,112; militia, $29,500; and for maintenance of State institutions, as follows: Institute for the Blind, $12,000; for the Deaf-Mutes, $21,600; university, $15,000; Normal School, $27,200; Industrial Institute, $15,000; Southwestern Industrial Institute, $12,000; Southern University, $10,000; Asylum for Insane, $140,000; Charity Hospitals, $122,000; Lepers' Home, $10,000; Soldiers' Home, $17,500; pensions, $75,000; support of Penitentiary, $290,000. The general appropriation bill carries a million dollars a year. The special appropriations reached nearly $500,000.

A bill providing that no history should be used in the schools of the State that did not give credit for the victory at Santiago to Admiral Schley was passed, but was vetoed. A bill to create the position of a representative by the people of the State. A proposal to amend the Constitution so as to allow the Governor to succeed himself was not pressed, as the Governor disapproved of it.

Among important bills that failed was an anti-trust bill and an antilynching bill, giving the Governor power to transfer prisoners and grant change of venue where lynchings are threatened. A separate street-car bill was passed. A general bill for violation of the law it was attacked as unconstitutional, and the judge of the Second Orleans Criminal Court sustained the demurrer.

Court Decisions.—In June the United States Supreme Court decided that Louisiana or any other State has the right to pass laws excluding bodies of people from going into a city or community which is quarantined.

In case involving the question whether the wages of a locomotive engineer were exempt from seizure for debt under the provision of law exempting "laborers' wages" the State, affecting New Orleans only, but important in its provisions. It gives to the voters in general the management of the fund for the sewerage and water-supply. A 12-mill tax in the city put up this fund, amounting to about $14,000,000, and voted that the handling of the money should be put into the care of the Drainage Commission, to which should be titled the property taxpayers, to be appointed by the mayor.

The bills affecting New Orleans were, besides the merger bill, an appropriation of $200,000 for a court-house; an act allowing cities to anticipate their revenues for ten years; changing the date of the city election to November 10, 1904, and every fourth year thereafter; providing for the succession of the city to the property of the Drainage Commission, of a firemen's pension fund, by using as a nucleus 1 per cent. of the city licenses collected; and the constitutional amendment elsewhere mentioned, enabling the city to fund $500,000 of certificates invalidated by a court decision.

Other acts were:

For an exhibit of Louisiana's resources at the Louisiana Purchase Exposition, making an appropriation of $100,000.

Making an appropriation to celebrate the centennial anniversary of the transfer of the territory of Louisiana to the United States at New Orleans in December.

To establish an insane asylum for colored per-
$4,000. Dissenting opinions were that the loss could not be so divided, that the agreement of the buyer to assume all risks either covered the extraordinary case of the destruction of the trees or covered only the order of trees.

Public Works.—Work was begun in the summer on a canal to run 75 miles from Washington, through St. Landry and Acadia Parishes, to the Bayou de la Salle, and into Calcasieu Parish. This canal will be 250 feet wide, and there is an ample water-supply at Washington, on a branch of the Atchafalaya and Mississippi rivers. It is proposed to build this canal and equip it with the most modern appliances, sufficient to irrigate from 500,000 to 700,000 acres, which to-day is prairie.

A good Intent dry-dock, at Algiers, opposite New Orleans, sank Dec. 27. It was built thirty-five years ago, and cost originally $36,000, but many thousands have been spent in improvements upon it.

Biological Station.—A biological station has been established at the mouth of Calcasieu river, in Cameron Parish. A large building has been erected, and many specimens of the Gulf's rich fauna have been collected.

Alleged Violation of Neutrality.—A flurry of excitement was caused in the spring by the statement of Gen. Pearson, representative of the Boers, that there was at Chalmette a base of supplies and enlistment station for the use of the British in the South African War. The Governor laid the facts before the Government at Washington. As hostilities ceased soon afterward, there was no occasion for further action.

Political.—At the election in November for members of Congress only 20,265 votes were polled, although the number of possible voters in the State is 235,344. In New Orleans, where there are about 40,000 citizens qualified to be voters, only about 16,000 were registered, and not all of these voted.

The small number voting is due in part to the effect of the new Constitution in disfranchising a large percentage of otherwise qualified voters, in part to the requirement of a poll-tax payment of $1, which in part to the fact that there is practically but one party, there is little interest in elections. The 7 members of Congress are all Democrats.

The constitutional amendments were submitted, 4 of which were carried. They are: 1, to make valid certain contracts for works of public improvement in New Orleans; 2, relating to the payment of judicial expenses; 3, creating a special board of appraisers; 4, changing the specifications of property exempt from taxation. The exemptions include church, school, and library property, household property to the value of $500, mining and certain manufacturing property for ten years; certain exemptions to railroads hereafter built and completed before 1904, and property used by the National Guard for military purposes.

The 2 amendments that were defeated were: 1, the repeal of the poll-tax payment as a requisite for voting; 2, changes in the judiciary system, creating more judgeships, and providing that only cases involving $5,000 or more can be carried to the Supreme Court. The limit remains $2,000.

Reports of registered voters and poll-taxes paid appear to give proof of the claim that the poll-tax requirement has not operated to disfranchise negroes, those registered having as a rule paid the tax, while many white citizens have refused or neglected to do so. These figures showing that in 10 parishes where there were 11,096 white voters 21,951 poll-taxes were paid in 1900.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to the decennial census since admission, was 236,288 in 1820; 391,455 in 1830; 501,793 in 1840; 701,264 in 1850; 625,278 in 1860; 626,915 in 1870; 648,396 in 1880; 661,086 in 1890; and 694,466 in 1900. Capital, Augusta.

Government.—The following were the State officers in 1902: Governor, John F. Hill; Secretary of State, Byron Boyd; Treasurer, Ormandal Smith; Attorney-General, George M. Seiders; Superintendent of Education, W. W. Stetson; Adjutant-General, Augustus B. Farnham; Commissioner of Labor, Samuel W. Matthews; Bank Examiner, F. E. Timberlake; Insurance Commissioner, S. W. Carr; Liquor Commissioner, James W. Wakefield, who died June 6 and was succeeded by Justin M. Leavitt; Railroad Commissioners, Joseph B. Peakes, B. F. Chadbourne, Parker Spofford; Assessors, George Pottle, Otis Hayford, F. M. Simpson; Librarian, Leonard D. Carver; Pension Agent, E. C. Miliken; Commissioner of Agriculture, Augustus W. Gilman; Land Agent and Forest Commissioner, Edgar E. Ring; Superintendent of Buildings, E. C. Stevens; Registrar of Statistics, A. G. Young; Steamboat Inspectors, Horace Atwood, J. M. Taylor; Chairman of Commission of Inland Fisheries and Game, L. T. Carleton; Chief Justice of the Supreme Court, Andrew W. P. Wiswell; Associate Justices, Lucilius A. Emery, W. F. Whitehouse, Sewall C. Strout, Albert R. Savage, Frederick A. Powers, Henry C. Peabody, and Albert M. Spear, the last named succeeding William H. Fogler, who died in February; Clerk, W. S. Choate. All are Republicans except Justice Strout.

The term of the State officers is two years. The election takes place on the second Monday in September of even-numbered years. The Legislature meets biennially the first Wednesday in January in the odd-numbered years; the session is not limited.

Finances.—The Treasurer's report for 1901 was rendered in February. The total receipts for the year amounted to $2,392,022.88, with the cash on hand at the beginning of the year, $198,879.01, makes the sum of $2,590,901.87 to be accounted for.

The total expenditures for the year amounted to $2,293,044.70, leaving a balance on hand Dec. 31, 1901, of $297,837.17, or the sum of $95,938.16 more than was on hand at the beginning of the year 1901.

The bonded debt amounts to $2,053,000; the temporary loans to $250,000; the trust funds, upon which interest is paid, to $794,092.

The State has liabilities amounting to $177,894.08, upon which no interest is paid, being deposits of insurance companies. Other liabilities amount to $856,191, and $361,726.13 is due counties for county taxes paid, making the total liabilities of the State $4,169,813.25.

The income from the organization of new corporations and the increase of capital stock of old ones in 1901 was $50,775. For the first ten months of 1902 it was $75,095.

The taxes on savings-banks amounted to $500,470.92 in 1901, and $537,729.51 in 1902. The tax on loan associations was $214.43 in 1901 and $262.47 in 1902. The taxes on railroads in 1901 amounted to $291,460; the increase in 1902 was about $35,000. Other receipts were: Trust and banking companies, $810; income from life, fire, and marine insurance, $592.36; telegraph, telephone, and express companies, $25,186.23; insurance companies, taxes and fees, $86,953.28; collateral inheritances, $35,
UNITED STATES OF AMERICA. (Maine.)

1891.41; public lands, income, $13,408.08; shore reclamation, Indiana, $3,474.50; lines and licenses, fish and game, $8,582.98; from United States, account Spanish War, $28,263.21. The receipts from dog licenses amounted in 1901 to $28,968; payments for damage to domestic animals by game, 18,000 the year. The remainder of the fund goes back to the town treasuries.

Valuations.—In 1901 the total valuation of the state, except the wild lands, was $317,667,594. The wild lands were valued in 1900 at $10,197,407. The money at interest in the State, so far as the assessors were able to ascertain for taxation for 1905, amounts to $11,308,877.

The total debt of all the towns is given as approximately $8,780,100, or 2.7 per cent. of valuation. This does not include the plantations. More than two-thirds of the total is owed by the cities; 122 towns are free from debt, and 12 have a surplus. The real and personal property of the 20 cities as locally assessed amounts to $141,894,429; the valuation by the assessors is lower, amounting to about $120,000,000.

Education.—The number of illiterates of ten years and over in the State, as shown by the census of 1900, was 29,060. By the percentage of those between ten and 15 who were able to read and write, Maine stood twenty-eighth in the list, with 97.92 per cent.

The apportionment of the school fund and mill tax for 1902 disposed of $509,280.77, which is an increase of $28,118.59 over the amount apportioned in 1901. The returns to the superintendent of public schools show the total number of pupils in the State to be 21,953, the same that in 1901, with a living a fraction over $2.77 for each pupil. The number reported in 1901 was 211,834, which gave a fraction over $2.65 per pupil.

Half of the savings-bank tax goes to the schools. The increase of this and of the State valuation has largely added to the school fund in recent years. The cost of providing free textbooks averages about 98 cents to a pupil. The law compels towns to furnish them; the State provides for unincorporated places. The average wages of male teachers in 1901 were $33.65 a month, of female teachers, $26.72 a week.

The class of 1902 at the Castine Normal School numbered 50. In 1901 211 free high schools were receiving aid from the State.

The catalogue for 1902-03 shows 36 instructors and 391 students at the institution. Of these students there are 275 in the college proper and 124 in the medical school. This shows a gain of 2 instructors and 50 students over the previous year.

The class of 1875 presented the college with new entrance gates at the centennial celebration. A library building has been given by T. H. Hubbard.

The eighty-third Colby University opened in September with an entering class of 72, of whom 32 were women. At Bates College, Lewiston, a new library, the gift of Mr. Corum, was dedicated in October.

The Legislature of 1899 made an appropriation to carry into effect the act establishing free public libraries. On Oct. 29, 1899, the first library was sent out, and the selection of books for each was prepared for circulation. Although only $1,000 a year is available for the purpose, there were in 1902 68 libraries going the round of the State with about 1,400 volumes.

Military.—The number of men subject to military duty in the State in 1901 was 102,339. About 600 men were encamped at Camp Hill for the annual muster in August. The National Guard numbers 666.

In 1901, 2,571 pensioners received State aid. The annual appropriation is $60,000.

Charities and Corrections.—Report of the General Hospital, covering its thirty-second year, shows that for the year ending Sept. 30, 1,287 patients—636 male and 631 female—were admitted. There were 102 under treatment at the close of the year. In the year 75 patients died at the hospital, 741 were discharged as recovered, 297 as relieved, 21 as not relieved, and there were 112 who were examined and advised but not treated. The expenditure of the hospital for the year was $63,305. There is a deficit of about $7,000. The notable event of the year was the completion of the nurses' home to accommodate 50 nurses.

A building for surgery purposes is being constructed, costing about $33,000.

There were 92 pupils in the School for the Deaf at Portland, in 1901. The State appropriation is $17,500 a year.

The Reform School has received 2,395 boys since its first opening; there were 141 Dec. 1, 1901.

Railroads.—In 1901 reports were received from 22 steam roads and 19 railroad companies. In 1901, 21 steam and 18 street railways, consolidations having reduced the number. The gross income per mile of the 21 steam roads varies from $512 on the Wiscasset and Quebec to $13.84 on the Boston and Maine. Only a small part of the former line was in operation up to June 30, 1901, and the gross income of all the lines operated by the company is included in the average of the Boston and Maine.

There are 347.72 miles of street-railway in operation. In the construction and equipment of the street railways more than $10,000,000 has been expended, and yet the aggregate bonded indebtedness of the 18 systems in existence is only $5,723,517.83. The gross earnings for the past year aggregated $1,449,043.97, and the operating expenses amounted to $1,035,104.87.

Highways.—The Legislature of 1901 appropriated $15,000 to aid towns in building and repairing roads. One road is to be designated as the main thoroughfare and to be known as a State road. Towns establishing such roads may secure State aid not exceeding $100 to each, which will be half the amount expended. The Secretary notified that year by 41 towns, applicants, but only 5 had complied with the full provisions of the law.

Steamboats.—There are in the inland water of the State, as nearly as can be ascertained, 17 steam- vessels. The inspectors have licensed buoys to 147 masters and pilots and 156 engineers. Seventeen new steamers were added to the service in the year.

Banks.—Report of the State Examiner for 1901 is summarized as follows:

There are 51 saving banks, with assets of $57,462,171.03; 18 trust and banking companies, $420,235.55, and 34 loan and building associations, $2,565,580.96; making 103 institutions, with bonded assets of $52,655,877.56.

For the first half of 1902 the figures were: Five one-savings-banks, with total liabilities of $52,655,877.56.
The resources included cash on deposit at $255,250.38 and cash on hand of $255,250.38. The total liabilities are $503,480.24, with total cash reserves of $255,250.38, and cash on hand of $255,250.38.

The insurance companies were as follows: Risks written, $255,250.38; amount paid in premiums, $255,250.38; losses incurred, $255,250.38; losses paid, $255,250.38.

The total risks written by the miscellaneous companies was $503,480.24, against $255,250.38 in 1900. The total of losses paid was $255,250.38, while in 1900 the losses paid amounted to $255,250.38.

Four assessment companies are doing business in Maine. These totals are as follows: Policies, $1,000,000; amount paid, $1,000,000; premiums received, $1,000,000; claims paid, $1,000,000.

There were 177 establishments engaged in the canning and preserving of fish in 1900, with 5,507 wage-earners, and products valued at $1,348,401. In the manufacture of paper and wood pulp, Maine ranked third with 53 establishments with 2,851 wage-earners and products valued at $222,275.

The wooded area of the State is given as 23,700 square miles, 79 per cent. of the total land area. There were 717 establishments engaged in the manufacture of lumber and timber products in 1900, the industry second in rank, with 8,834 wage-earners and products valued at $13,489,401.

Legal Declaration. A petition, signed by thousands, was given by the Supreme Court in December. The act of 1901 requiring hawkers and peddlers to pay a license fee was declared unconstitutional.

The new defensive war which the Government has allotted Casco Bay will consist of completed of 38 rifles. Eighteen of these will be 12-inch, 10 10-inch, and 10 8-inch, to cost for guns $1,382,164 and for carriages $546,000. The large disappearing guns at Fort Williams, Portland Head, are the largest in the world. They have a range of 10,000 yards and fire 5 shots before the first one reaches its destination.

In addition there is constructing a mortar battery to contain 46 12-inch guns, to cost $1,382,164, and their carriages an additional $336,000. These, with the fortifications at Diamond and Cushing's islands, complete a line of defense which would effectively take care of any fleet that any country might send here.

The whole eastern end of Diamond Island has recently been acquired by the Government.

The ancient fortifications at Pemaguit, known as Fort William Henry, have been conveyed to the State by the Pemaguit Monument Association, and are in the charge of a commission. The foundations of the old fort, which was destroyed by Iberville, have been uncovered and a part of the wall rebuilt from the original materials, corresponding to the plan of the old fort; and it is desired to carry on the work still further, for which the Legislature is asked to make appropriation.

Centennial Anniversaries. Several towns this year celebrated the one hundred and fiftieth anniversary of their incorporation—Waterville, Minot, Brownfield, and Lincolnville. York reached this year the age of two hundred and fifty years.

Bownolham. Half the business portion of this village was destroyed by fire Dec. 14.
U.S. OF AMERICA. (MARYLAND.)

Political.—A Governor, members of Congress, and a Legislature were elected in September.

The Republican convention, at Portland, June 11, renominated Gov. Hill and adopted a platform affirming the party principles, approving the policy of the administration, favoring legislation to suppress anarchy, and saying on State affairs: "Let the party hold the strong line of the administration of Gov. Hill, under which the Republican pledges of two years ago have been fully and faithfully carried out. As a result of wise legislation, the great corporate interests are bearing a larger portion of the public burdens than ever before in the history of our State. Within a few weeks the last dollar of the temporary loan, incurred largely on account of the war with Spain, will be paid. Along with this good work has gone also a substantial reduction in our permanent debt. All this has been accomplished without any increase in the State tax rate."

At Bangor, June 17, the Democratic convention nominated Samuel W. Gould for Governor and adopted a platform demanding, "the immediate abolition of all tariffs upon trust-made articles."

"We ask," it said, "why it is that the Maine Congressmen permit the steel trust to charge the ship-builders of Maine $1.65 per hundred for the same material which the English only charges the English of New England 95 cents, thereby crippling one of our State's leading industries?"

The Prohibitionists met at Bath, June 4, and nominated James Pond for Governor. Charles L. Fox was the candidate of the Socialists for the post.

The vote for Governor, Sept. 8, stood: Hill, Republican, 38,349; Gould, Democrat, 38,364; Ferriguio, Prohibition, 4,376; Fox, Socialist, 1,973. Republicans were elected to Congress in all the 4 districts.

The Legislature will have, on joint ballot, 158 Republicans to 24 Democrats. Three Republican candidates in Lewiston will contest the election of the Democratic candidates.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was: 1790, 119,783; 1820, 388,948; 1840, 589,034; 1850, 867,049; 1860, 788,894; 1870, 834,945; 1880, 1,042,390; 1890, 1,105,304; 1900, 1,297,140.

Government.—The following were the State officers during the year: Governor, J. Walter Smith; Secretary of State, Wilfred Bateman; Comptroller, Joshua W. Hering; Treasurer, Murray Vandiver; Adjutant-General, John S. Saunders; Attorney-General, Isidor Rayner; Superintendent of Education, M. Bates Stephens; Commissioner of Insurance, Lloyd Wilkinson; Commissioner of Public Lands, E. Stanley Toadvin—all Democrats; Chief Judge of the Court of Appeals, James McSherry; Associate Judges, David Fowler, A. Hunter Boyd, Henry Page, I. Thomas Jones, John B. Briscoe, Samuel D. Schmucker, and James A. Pearce; Clerk, Allan Rutherford—all Democrats except Schmucker and Rutherford, Republicans.

The term of the State officers is four years; they are elected in November of the years preceding the presidential elections, and take office January 1st. State Appropriations and estimates for the current biennial period for current expenses are annual, beginning in January of even-numbered years, and are limited to ninety days.

Johns Hopkins University.—Feb. 22 is observed at the Johns Hopkins University as Decoration Day. This day in 1902 marked the silver jubilee of the university and the formal transfer of the presidency of the institution from Dr. Daniel Colt Gilman, who organized the university and directed its destiny from its beginning, to Prof. Ira Remsen, who had been associated with President Gilman on the faculty from the opening of the university. Eighty-three educational institutions had at least one member of their faculty present, most of them being represented by their presidents. The ceremonies extended over three days. During the exercises an announcement was made that the donors of the university of a tract of land in the city estimated to be worth $1,000,000 had relieved the university of the conditions originally connected with the gift of raising an additional $1,000,000 in cash. But $750,000 of the $1,000,000 had been raised, and as some of the subscriptions had been made conditional upon the raising of the entire $1,000,000, the friends of the university continued their efforts until June 28, when President Remsen was able to announce that the entire million-dollar fund, though no longer a condition, had been completed.

Landscape architects have been laying out the tract, which contains 151 acres of beautifully wooded lands, and the university has, in accordance with an act of the General Assembly, purchased a strip of land near the university, which the legislature had authorized to be purchased for 10 acres to the city for a public park. The trustees will follow the principle that has guided the policy of the university from the beginning and not use any of the principal for the support of the park.

The Commemoration Day was also made notable by the largest gathering of alumni of the university ever assembled, and the presentation to retiring President Gilman of a beautifully engraved and illuminated address signed by 1,012 alumni. The presentation address was by Dr. Woodrow Wilson, an alumnus of Johns Hopkins, now president of Princeton University.

In his first annual report President Remsen said: "A false impression has been spread abroad in regard to the present condition of the university. It will probably be a surprise to many to learn that the university has no debt. It has had misfortunes, but, by the good management of the trustees and the generous aid of the citizens, and of the State and of the Federal Government, it has in every instance met its obligations. A cautious policy has been necessary, but the caution has been wisely exercised so as to affect as little as possible the members of the University. As a result, the university has been practical in the increase of the salary of those who are entitled to recognition by virtue of the character of their work. This has been the cause of a good deal of hardship, but this has been in the main without complaint. The loyalty of our staff during the long period of depression is worthy of the highest praise. While the buildings of the university form a striking contrast to the costly collections that so many of the older and some of the younger institutions rejoiced in, and while many a visitor has expressed astonishment and disappointment, at the first sight of these plain structures, the fact should be emphasized that the equipment of these buildings has never been allowed to deteriorate. The laboratories are, and always have been, supplied with everything needed for the purposes of the work carried on in them. I do not believe any important piece of work, whether in the line of instruction or of research, has ever been held up for lack of means. Large sums have been expended from the beginning for the purposes of encouraging research."

Railroad,—The strong desire of the Baltimore and Ohio Railroad interests to secure a line to the Atlantic coast.
seaboard, with tide-water terminals, gave the city of Baltimore its long-looked-for opportunity to dispose of its controlling interest in the Western Maryland Railroad at a reasonable figure. The city had guaranteed the company's bonded indebtedness, and as the road was just beginning to pay its fixed charges, the road's debt to the city had been constantly growing. When it became known that a syndicate representing the Wabash interests had put in a bid for the road, competition became brisk. The Reading Railroad and other syndicates also put in bids. The bid of the Wabash syndicate of $8,751,570.45 was accepted in preference to the higher bids of its competitors, one of which was $10,000,000. The contract with the Wabash syndicate requires the purchasers to avail themselves of the extensive tide-water franchises of the Western Maryland and build terminals here.

The syndicate also purchased the interest of Washington County in the road upon the same terms upon which it acquired Baltimore city's interests. Since acquiring the Western Maryland the Wabash has bought considerable property along the water-front, and work on the terminals has already been in progress to extend the waterfront a considerable distance. Prior to purchasing the Western Maryland, the Wabash secured control of the West Virginia Central and Pittsburg Railroad. This is to be connected with the Western Maryland, to give the Wabash a transcontinental road.

The annual report of the Baltimore and Ohio Railroad shows remarkable results achieved in the construction of that company, the "cradle of railroads," which a few years ago was bankrupt. The receivers issued enormous blocks of securities to provide for improvements and new equipment. Their equipment purchases aroused opposition from the bondholders and bankers, who misapprehended their acts. Not only were large amounts of securities issued, but the maintenance expenditures of the company were also largely increased. In two years the maintenance of way and maintenance of equipment expenditures rose from $4,838,000 to $7,653,000, an increase of almost 60 per cent. In three years the Baltimore and Ohio was almost entirely reconstructed, and from a state of absolute bankruptcy it was placed upon a dividend basis. There were issued in reorganization the reorganization bondholders' certificates and reorganization expenses, nearly $42,000,000 of bonds, $10,000,000 of convertible debentures, $24,000,000 preferred stock and $6,000,000 of common stock. About $19,000,000 of cash was realized from the sale of these securities, of which more than $30,000,000 was spent for new equipment and improvements to the road.

The annual report shows gross earnings for the entire system of $622,153,150. This includes the controlled or affiliated lines, most of which were acquired during the year covered by the report. On the Baltimore and Ohio system proper the gross earnings amounted to $31,178,000. The net income for the twelve months amounted to $9,021,000.

Commerce.—Baltimore largely increased its customs receipts in 1902, as the result of an enormous increase in imports; but the exports show a marked decrease. The customs receipts amounted to $4,699,116.03, an increase of $2,829,078.63, as compared with the receipts of 1898. The value of the imports was $74,697,768, a decrease of more than $41,000,000 since 1898. In the five years the revenue from collecting the revenue fell from 13.3 cents to 5.5 cents on the dollar. The total expense of collecting in 1902 was $271,230.38, and in 1898 $250,400.69.

The following is a summary of the collections of internal revenue in 1902, in comparison with 1901: Assessments, penalties, etc., $120,371.80, decrease $770,781.21; fermented liquors, $1,486,601.30, decrease $444,134.45; distilled spirits, $2,484,890.52, decrease $396,521.17; cigars and cigarettes, $737,580.76, decrease $65,047.76; snuff, $225,000.27, decrease $53,257.34; tobacco, $765,445.90, decrease $342,971.34; special taxes, $194,053.49, decrease $24,298.72; oleomargarine, $72,721.32, increase $6,079.28; adhesive stamps, $99,729.94, decrease $499,841.49; renovating butter, $861.30, decrease $861.50. The collections amounted to $6,164,312.90, a decrease of $2,489,434.04, caused principally by the abatement of the war-revenue taxes. While the collection from fermented liquors, cigars, tobacco, and snuff are less than in the previous year, the actual manufacture and sale of the articles themselves show a substantial increase over the previous year. The decrease in distilled spirits is occasioned by the closing of one of the largest plants. The grain trade was not satisfactory. The previous year's failure of the corn-crop and the shortage of cars after the last corn-crop was ready for sale probably affected the corn-export trade, although the amount of corn exported in December—3,898,851 bushels—was very satisfactory, the quantity exported for the preceding months of the year having been only about 1,000,000 bushels more.

The exports of bituminous coal, foreign, from Baltimore in 1902 were 245,864 tons, against 405,505 tons in 1901.

Industries.—The charter records of the Superior Court show that in 1902 196 corporations, with an aggregate capital stock of $14,657,400, were formed in Baltimore for business purposes. Of these, 171, with a total capital stock of $6,073,000, are for manufacturing and trade. The remaining 25, with a total capital stock of $8,783,500, are building associations and land and loan companies.

In the shirt-making industry of Baltimore, the total product of 1901 was worth about $7,000,000; the value of the product of 1902 will probably reach $10,000,000.

In the clothing trade the volume of business exceeded that of any previous year, and the number of employees employed by manufacturers is greater. Fully 25,000 persons are employed in this industry, with steady work at good wages. The output is estimated between $19,000,000 and $20,000,000. The receipts from the clothing trade in this market in 1902 were 34,662 hogheads, about 3,000 hogheads more than in 1901. The increase was partly caused by unusually heavy receipts of the new crop, estimated at 1,800 hogheads.

Immigration.—The number of alien immigrants that arrived at this port in 1902, on whom the tax of $1 each was collected, was 47,603, compared with 27,014 in 1901 and 19,135 in 1900. They come from the following countries: Austria-Hungary, 32,435; German Empire, 5,057; Italy, 32; Roumania, 29; Russian Empire, 9,820; England, 110; Turkey in Europe, 43; Ireland and Denmark sent 1 each; Norway, 2; Scotland, 3; West Indies, 9; Servia, 13; Spain and Switzerland, 15 each. The number of immigrants that settled in Maryland, and the race or people to which they belong, in the year ended Dec. 31, 1902, was: English, 53; Roumanian, 5; German, 793; Hebrew, 632; Russian, 10; Polish, 633; Russiak, 6; Croatian and Slavonian, 5; Hungarian, 24; Roman Catholic, 106; Lithuanian, 71; Magyar, 46; total, 2,510.

Legislative Session.—The regular biennial session of the Legislature began on Jan. 1 and con-
continued until April 1. The Senate consisted of 17 Democrats and 9 Republicans, and the House of 51 Democrats and 44 Republicans. John Hubner was elected President of the Senate, and Noble Mitchell Speaker of the House. Six hundred and thirty-three bills were passed and several resolutions. One of these was a memorial urging Congress to take action to give recognition to Commodore Winfield Scott Schley as the commander of the American fleet at the battle of Santiago. There was also a joint resolution for a joint committee to adjust the Maryland-Virginia boundary-line, and to decide upon joint legislation for the preservation of the food supply of the Chesapeake Bay. A resolution was also adopted, urging the acquisition by the Government and the enlarging and deepening of the Chesapeake and Delaware Canal. The more important laws that were passed during the session were:

Amending the election law and removing some of its defects. It requires notice to all persons suspected of not being entitled to registration and an abundant opportunity for a hearing, before their names are stricken from the list. It also provides that no person coming into Maryland from another State shall be entitled to vote until one year after his intention to become a citizen of this State, shall, upon his application, have been inscribed in a book kept for the purpose by the Circuit Court clerks in the various counties and by the clerk of the Superior Court of Baltimore city. The law also provides that the names of the various candidates shall be printed on the official ballots in 12-point (pica) type, one-eighth of an inch high and in depth. At the recent elections the names of candidates in some of the counties were printed in a small, antiquated type for the evident purpose of puzzling or misleading voters who had a meager education, the invalidating of the ballot of the Negro voter being especially aimed at.

That no room or apartment in any tenement or dwelling-house shall be used except by the immediate members of the family residing therein, which shall be limited to a husband and wife and their children, for the manufacture of any article of clothing, feathers, artificial flowers, cigarettes, or cigars. Before such dwelling can be used for such purposes there must be an inspection by the Chief Officer of Industrial Statistics and a permit issued by him.

A compulsory school-attendance law. A child that is found to be an habitual or incorrigible truant to be “parental school,” to be established in each county and in the city of Baltimore.

For the appointment of a commissioner to codify the incorporation laws of the State and to prepare a general system of incorporation law, to be submitted to the next Legislature.

For the appointment of a tuberculosis commission.

Forbidding the employment of minors under sixteen years of age in handling intoxicating liquors, or in any brewery or bottling establishment where liquors are prepared or offered for sale.

To prevent the desecration of the national flag. It provides that the flag or coat of arms of the United States or any imitation thereof shall not be attached to or imprinted on any goods, wares, or merchandise, or any advertisement of the same.

Providing for a State library commission, to consist of 7 persons, of whom at least 2 shall be women. The State Comptroller on Dec. 31, 1900, Superintendent of Public Instruction, and the librarian of the Enoch Pratt Library to be ex-officio members, the others to be appointed biennially by the Governor. Its duties are to advise all public and free libraries and all committees and persons proposing to establish them as to the best means of selecting and cataloguing books and other details of management; also to organize and conduct traveling libraries.

Placing the primary elections of both parties upon practically the same footing as the general elections.

Authorizing the Mayor and City Council of Baltimore to issue stock to an amount not exceeding $1,000,000 for enlarging and improving the water service. The ordinance was submitted to the voters at the municipal election, and was ratified by a large majority.

Changing the law for a State board to examine persons desiring to practise medicine in the State. Two State boards are now provided for, one named by the Medical and Chirurgical faculty of the State of Maryland, and the other by the Maryland State Homeopathic Society, which are to examine respectively the candidates of the two schools of medicine. Physicians who have been practising in States which allow Maryland practitioners to practise without taking an examination are to be entitled to practising.

Prohibiting railroad companies from issuing, selling, or receiving tickets for passage through the city of Baltimore without coupons attached to and from the city, and allowing a stop-over privilege.

Providing a pension fund for teachers who have taught in the public or normal schools twenty-five years and have reached the age of sixty years. In the event of their becoming physically or mentally disabled they are entitled to an annual pension of $200.

Providing for the issue of bonds to the amount of $800,000, the proceeds to be used for the erection of an addition to the State-House in Annapolis, for the removal and demolition of the State Library Building and annexes, for construction of a plant to heat all the State buildings, for the completion of the Fifth Maryland Armory, and the construction of an annex to the Maryland House of Corrections.

For a State Board of Undertakers, to be appointed biennially by the Governor and to consist of 7 members, of whom 5 shall be undertakers of at least five years’ active experience.

For a State Board of Pharmacy, to be composed of 5 persons, to be appointed by the Governor. The law provides that no person shall open or conduct a pharmacy unless such person has received a certificate from the board, and no pharmacy shall at any time be left in charge of any person not a certified pharmacist to compound prescriptions or sell poisonous drugs.

Providing for the creation of a commission to investigate the cause, origin, treatment, prevention, and cure of the disease in horses called cerebro-spinal meningitis.

Making the counterfeiting of any kind of deed, will, promissory note, or document of value of any kind a felony.

For the more complete support of the Maryland Agricultural College, containing the provisions necessary to meet the requirements of the congressional acts known as “the land grant act of 1862,” “the Hatch experiment station act of 1887,” and “the Merrill act of 1890.”

Baltimore.—The city was able to meet every one of its financial obligations in 1902, and on Dec. 31, 1900, the city was in nearly $200,000 in bank. The city comptroller announced that every department lived within its appropriation for the year, and that there will probably be an unexpected bal-
ance of $1,500, which will be turned into the sinking fund. Last year the city expended about $3,402,849.92.

The Fire Department consists of 513 active men, including substitutes. The cost of operation for 1903 was as follows: Salaries, $347,305.21; expenses, $1,530,946.93; salaries and equipment of the 23 Engineering Company, $18,277.74.

City Engineer Fendall reports the expenditure of $175,000 in repairs to cobble and improve streets and $25,000 on the maintenance of and repairs to the city bridges.

Building Inspector Preston's report shows that the amount spent for improvements to public buildings for the city was $428,215.86, while for repairs and rebuilding there was spent $178,898.

The Street-Cleaning Department expended $328,925.15, out of a total appropriation of $369,040.

The collector of water rents and licenses reports the receipt of $17,055.83 from the sale of dog licenses and $31,542.92 from the sale of wagon, street-car, telephone pole, theatrical, pool, and other licenses. From water rents he collected about $853,000.

The chief engineer for the Subway Commission reports the completion of 600,000 feet of duct work in the year. Almost the only unfinished work is the connection of the Pratt Street powerhouse and substation of the United Electric Light and Power Company with the subway system.

In 1901, the net cost to the taxpayers on account of the jail, exclusive of salaries, was $13,716.10, being the lowest in the history of the institution. This record was surpassed in 1902, the net cost for the year being $10,455.35, a decrease of 24 per cent.

Political.—The Legislature, at its biennial session, elected Arthur Pue Gorman, Democrat, to succeed George L. Wellington in the United States Senate. Mr. Gorman, who was Mr. Wellington's predecessor, will take his seat on March 4, 1903. The Legislature also elected Murray Vandiver to succeed himself as State Treasurer.

At the November elections 6 members of Congress were elected, of whom 4 were Republicans and 2 Democrats. The political delegation having been solidly Republican.

MASSACHUSETTS, a New England State, occupies an area of 8,351 square miles. The population, according to each decennial census, was 378,787 in 1790; 422,945 in 1800; 472,040 in 1810; 523,159 in 1820; 610,408 in 1830; 737,099 in 1840; 904,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,783,085 in 1880; 2,238,943 in 1890; and 2,905,346 in 1900. Capital, Boston.

Government.—The following were the State officers in 1902: Governor, Winthrop Murray Crane; Lieutenant-Governor, John L. Bates; Secretary of State, William M. Olin; Treasurer, Edward S. Bradford; Auditor, Henry E. Turner; Attorney-General, Herbert Parker; Insurance Commissioner, Frederic L. Cutting; Adjutant-General, Samuel Dalton; Savings-Bank Commissioner, Warren E. Locke; James O. Otis; Prison Commissioner, F. G. Pettigrove; Margaret P. Russell, Henry Parkman, Mary V. O'Callaghan, Arthur H. Wellman; Chief of the Bureau of Labor Statistics, Warren H. Norton; Commissioner of the Board of Education, Frank A. Hill; Secretary of the Board of Agriculture, James W. Stockwell; Chief Justice of the Supreme Court, Oliver Wendell; Associate Justice, Thomas H. Hoag, appointed to the bench of the United States Supreme Court. He was succeeded by Associate Justice Marcus P. Knowlton, and Henry K. Braley was promoted from the Superior Court bench to fill the vacancy caused by Justice Knowlton's promotion. Other Associate Justices, James M. Morton, John Lathrop, James M. Barker, John W. Hammond, and William C. Loring; Clerk, Henry A. Clapp. All are Republicans.

The term of the State officers is one year; they are elected in November. The Legislature meets annually on the first Wednesday in January. The length of the session is not limited.

Finances.—The gross debt of the Commonwealth, actual and contingent, Jan. 1, 1902, was $77,896,635. Of this amount, $25,738,223 is represented by loans issued for State purposes exclusively, and $51,158,412 by loans issued for the benefit of cities and towns. Applicable to the loans issued for strictly State purposes are sinking-funds amounting to $13,278,180, making the net actual State debt $12,460,053. For the redemption of the contingent debt there are sinking-funds of $3,312,853, which makes the net contingent debt $48,645,558.

The Auditor's estimate of the sum needed for the expenditures of 1903 was $637,023.90. The reimbursement of towns for the care of the insane added $15,000 more to the expenses of the executive department than was needed in 1901. The Treasurer's department called for an increase of $10,000 for premiums on securities for the Massachusetts school fund, and a decrease of $1,000 on clerical assistance. For State and military aid $18,600 more was required; and for the Attorney-General's office $4,000 more.

In the estimates for 1903 the high prices of fuel and other supplies caused increases; and in addition each department is compelled by the new law to pay for its own printing. The Cattle Bureau asks for $100,000 for exterminating contagious diseases among animals. Last year the appropriation was $58,000. The Insurance Commissioner asks $15,700 for salaries, $29,025 for extra clerks, $4,000 for incidentals, and $4,600 for printing. The Civil-Service Commissioners ask for $25,550, an increase of $900 to cover printing. The Tax Commissioner desires $25,400, with an added sum of $9,500 for salaries; the Attorney-General $40,000, as last year, for salaries and contingent expenses; the Harbor and Land Commissioners $43,200, an increase of $1,000; the Highway Commission $34,350 for salaries, traveling expenses, etc. The Fish and Game Commissioners desire $5,830 for salaries, $1,550 for travel and incidentals, $780 for clerical expenses, and $18,445 for enforcement of game-laws, distribution of fish, etc. The Court of Land Registration asks $35,000; the Savings-Bank Commissioners the usual amount, with $5,000 added. The Auditor's estimate is $20,600, no increase; the Commissioners of War Records $10,000, as last year; the editor of the Province Laws, $1,200, an increase of $1,000. Treasurer Bradford asks for an increase of $15,000. He says that on April 1 $1,500,000 Bos-
ton and Albany bonds, a part of the investment, matured and were paid. Other investments in time securities are constantly maturing, so that on Nov. 5 there was $87,258.42 of the fund in cash, producing only 2 per cent. per annum.

The deputy chief of the district police asks for the fire marshal’s department $21,800, an increase of $1,000 for traveling expenses and of $800 for additional stenographer; for the district police proper the chief asks $104,100, an increase of $500. Judge Dewey, for the bar examiners, asks $1,500, as last year; the State Board of Charity $352,500, an increase of $15,800.

Education.—The number of illiterates in the State reported by the census of 1890 was 134,645. In the percentage of children from ten to fourteen who were able to read and write Massachusetts stood ninth in the list of States and Territories, with 99.33 per cent. In 1890 it stood second, with 99.17 per cent.

Caroline Hazard succeeds Alice Freeman Palmer (deceased) as member of the State Board of Education.

The enrolment at Harvard for 1892-93 shows 334 instructors and 4,261 students. The proportion of instructors to students is greater than ever. There are 120 more students than in the year preceding, and 811 more than the usual number of persons enrolled for instruction in 1892 is 5,858. The Law School shows its usual steady growth in number as this year’s total being 640. The requirement of a college degree as a qualification for admission to the Medical School, the full force of which is felt this year, is the first time in the history of the institution a decrease of about 50, 445 men being registered. The Dental School shows an increase, with 112 students. The Graduate School has 316 students against 312 last year. The Theological School remains as before, and the Bussey Institute, or Agricultural School, registers an increase of one. The catalogue notes the opening of two museums—the geological section of the Museum and the new Germanic Museum.

Harvard has a new hospital, the Stillman Infirmary, opened in September. It is the gift of John Inman and its cost $29,990. It is nearly complete and modern as any hospital in the United States.

A gift of $250,000 from Mrs. Collis P. Huntington on March completes an aggregate of nearly $3,000,000 for the enlargement and endowment of the Harvard Medical School.

Funds have been collected for a building at Radcliffe to serve as a home for the use during college hours of the day-students who come from the various parts of the city and vicinity. The fund is at present about $125,000. The house is to be known as the Elizabeth Cary Agassiz Hall.

Tufts College celebrated its fiftieth anniversary in April. There were 903 men and women catalogued in 1901-92, and 141 degrees were conferred in course in June.

Simmons College, provided for in the will of John Simmons, a Boston merchant who died about forty years ago, leaving for the purpose property now amounting to more than $2,500,000, was opened in Boston in October with about 120 women as students. It has as yet no permanent home. Four lines of instruction are opened —school economy, secretarial, engineering, and scientific courses. For entrance a high-school education or its equivalent is required. The secretarial courses, which are now the most popular, give instruction in modern languages, history, stenography, and typewriting.

Banks.—At the beginning of the year there were 180 savings-banks in the State, with 1,593,640 depositors, and deposits aggregating $580,000,000. The Central National Bank of Boston closed its doors Nov. 14, the Comptroller of the Currency having ordered the Bank Examiner to take charge of its business. The closing is said to be due to depression and a lack of quick assets. No dishonesty was charged.

A final dividend was paid in December to the creditors of the Globe National Bank.

Building and Loan Associations.—There were of these 128 in the State, with 74,771 members and assets amounting to $25,674,207.

Industries and Products.—The value of farms in the State in 1890 was given as $182,646,704. Only 95 acres were devoted to wheat in 1890; dairying and market gardening have increased in late years, and also the cultivation of fruit.

The wooded area is estimated at 4,200 square miles.

The value of manufactured products in 1890 was about $1,033,000,000. The value of cotton manufactures, exclusive of cotton small wares, was $110,478,327. The capital invested was $155,761,163, and the number of looms 179,260. For cotton small wares the figures were: Capital, $528,235; value of products, $646,848; looms, 382.

In the value of woolen manufactures Massachusetts stood first among the States, with a value of $81,041,327.

In 1891 the number of textile mills added to those of the State was 4, with 134 looms and 30,000 spindles.

Peabody.—The Historical Society of Peabody has erected a monument to the memory of John Proctor, of that place, who was hanged as a witch on Gallows Hill, Salem, Aug. 19, 1692.

Proctor’s wife and children were prosecuted at the same time, but escaped death. The monument consists of a boulder bearing a tablet.

Boston.—The number of immigrants to this country through the port of Boston in the year ending July 1, 1902, was 41,462. The greatest number ever admitted in one year into this port was 52,418, in 1882. In the year ending July 1, 1891, the pork, and in a nearly complete and modern as any hospital in the United States.

In December the Dominion Line established direct service with ports on the Mediterranean and this is held accountable in large measure to the increase of immigration.

By the report of an expert on the municipal finances, it appears that the cost of administration in Boston is greater than that of any other city in this country. The total expenditures per capita exceed those of New York by 181 per cent., and exceed those of the average of 10 cities by 172 per cent. These 10 cities are Chicago, Philadelphia, St. Louis, Baltimore, Cleveland, Buffalo, Milwaukee, Providence, Indianapolis and Kansas City. Some reasons are given to show that a part, at least, of this disparity is rather apparent than real. For instance, Boston is unlike many other cities, does not tax the school property for street improvements and other public works wholly on abutting properties, but pays for them from the general tax list. Hence the cost of streets—$5,351, compared with 40 cents in the 10 cities named. Again, the cost of ferries and bridges is due to the cost of the graphical portion, secretarial, engineering, and scientific courses. For entrance a high-school education or its equivalent is required. The secretarial courses, which are now the most popular, give instruction in modern languages, history, stenography, and typewriting.
CEPTING THE "DISTRICT OPTION BILL" WAS VOTED UPON.
THE BILL, WHICH WAS REJECTED BY A VOTE OF 45,939 TO 35,671, WAS SUBJECT TO THIS REFERENDUM.
THEIR ADVICE AS TO WHETHER OR NOT THE DISTRICTS SHOULD DECIDE INDEPENDENTLY THE QUESTION OF LICENSE FOR THEIR DISTRICTS.

WAKEFIELD.—A SOLDIERS' MONUMENT, THE GIFT OF MRS. HARRIET N. FLINT, WAS DEDICATED AT WAKEFIELD IN JUNE.

RIVERS AND HARBOURS.—THE APPROPRIATIONS MADE BY CONGRESS THIS YEAR FOR WATERS OF THE STATE WERE AS FOLLOWS: FOR BEGINNING THE WORK ON THE GREAT NEW CHANNEL OF BOSTON HARBOR, $3,600,000; HARBOR AT FALL RIVER, $156,000; GLOUCESTER, $302,000; NEW BEDFORD, $37,700; HYANNIS AND NANTUCKET, $23,000; NEWBURYPORT, $30,000; ROCKPORT, $22,000; LYNN, $25,000; BEVERLY, $10,000; COHASSET, $21,000; WOODS HOLE, $20,000; PLYMOUTH AND PROVINCETOWN, $3,000; MANCHESTER, $3,000; AND PROVISIONALLY $200,000 FOR THE HARBOUR OF REFUGE AT SANDY BAY, CAPE ANN. ALSO $85,000 FOR IMPROVEMENTS AT THE MERRIMAC, MYSTIC MALDEN, WEYMOUTH, TOWN, AND TAUNTON RIVERS.

LAWSUITS.—SEVEN MEN WERE TRIED AT PLYMOUTH IN NOVEMBER ON A CHARGE OF "WHITECAPING," IN HAVING TARRIED, FEATHERED, AND HORSE-Whipped A MAN AT MARION FOR ALLEGED IMMORALITY. THE TRIAL, WHICH ATTRACTION Much Attention, Ended in a Verdict of Not Guilty.

LEGISLATIVE SESSION.—THE LEGISLATURE THIS YEAR WAS MADE UP OF 118 REPUBLICANS—33 IN THE SENATE, 105 IN THE HOUSE—79 DEMOCRATS, OF WHOM 7 WERE IN THE SENATE, AND 2 SOCIAL DEMOCRATS, BOTH IN THE HOUSE.

RUFUS A. SOULE WAS REELECTED PRESIDENT OF THE LEGISLATURE, AND J. MYERS WAS AGAIN CHOSEN SPEAKER OF THE HOUSE.

THE MESSAGE OF THE GOVERNOR RECOMMENDED MANY RADICAL CHANGES IN THE ADMINISTRATION OF STATE DEPARTMENTS, AND OTHERS, WHICH WERE FORMULATED IN BILLS AND MANY OF THEM PASSED. FOLLOWING IS A SUMMARY OF THE RECOMMENDATIONS:

1. THAT THE POWERS AND DUTIES OF THE FIRE MARSHAL BE TRANSFERRED TO THE STATE BOARD OF AGRICULTURE; THE POWERS AND DUTIES OF THE INSPECTOR OF GAS AND GAS MANUFACTURES TO THE BOARD OF GAS AND ELECTRIC LIGHT COMMISSIONERS; THE POWERS AND DUTIES OF THE INSPECTOR-GENERAL OF FISH TO THE COMMISSIONERS ON INLAND FISHERIES; AND THE POWERS AND DUTIES OF THE STATE ASSAYER OF LIQUORS TO THE STATE BOARD OF HEALTH; THE POWERS AND DUTIES OF THE PENSION AGENT TO BE TRANSFERRED TO THE COMMISSIONERS OF STATE AID; THAT THE NUMBER OF SUCH COMMISSIONERS BE REDUCED TO ONE; AND THAT AN APPEAL MAY BE TAKEN FROM HIS DECISION TO THE GOVERNOR AND COUNCIL; ALL THE STATE OFFICERS BE ACCOMMODATED IN THE STATE-HOUSE, AND NONE IN HIRED QUARTERS OUTSIDE; A BOARD OF PUBLICATION TO BE ESTABLISHED COMPOSED OF STATE OFFICIALS, TO BE APPOINTED BY THE GOVERNOR AND COUNCIL, TO SERVE WITHOUT ADDITIONAL COMPENSATION, TO SUPERVISE PUBLICATION OF PUBLIC DOCUMENTS, WHICH HAVE GROWN TOO LARGE; THE SALARIES OF THE PARK COMMISSIONERS BE PERMANENTLY FIXED INSTEAD OF NAMED EACH YEAR BY THE GOVERNOR AND COUNCIL. IT WAS RECOMMENDED THAT IF LEGISLATION IS TO BE PASSED AUTHORIZING THE CONSTRUCTION OF A NEW SUBWAY IN THE CITY OF BOSTON, THE ACT SHOULD CONTAIN THESE PROVISIONS: THE SUBWAY BE OWNED, CONTROLLED, AND PAID FOR BY THE CITY OF BOSTON; AND SECOND, THAT THE ACT NOT TAKE EFFECT UNTIL IT HAS BEEN ACCEPTED BY A MAJORITY OF THE VOTERS OF THE CITY, VOTING AT A SPECIAL, STATE, OR MUNICIPAL ELECTION. TO PREVENT THE EXCESSIVE AND WASTEFUL CONSUMPTION OF WATER IN THE METROPOLITAN DISTRICT AND OTHERS, THE CONSUMPTION OF WATER SHOULD BE THE BASIS FOR DETERMINING THE ASSESSMENT OF THE 8 BOSTON AND PROVINCETOWN TOWNS; THAT ALL STREET-RAILWAY LOCATIONS GRANTED BY LOCAL BOARDS BE SUBJECT TO THE APPROVAL OF THE RAILROAD COMMISSION; AND THAT AS THE GENERAL LAW OF 1890 FOR THE ABDUCTION OF UNDER-CROSSINGS HAS PRACTICALLY CEASED TO BE OPERATIVE, ITS FURTHER OPERATION SHOULD BE SECURED BY AN APPROPRIATION OF $5,000,000 TO BE EXPENDED AT THE RATE OF NOT MORE THAN $500,000 IN ANY ONE YEAR, UNDER THE DIRECTION OF THE RAILROAD COMMISSIONERS.

AN INCIDENT OF THE SESSION WAS THE PROTEST OF THE TWO SOCIALISTS IN THE HOUSE AGAINST THE PROPOSAL TO EXTEND THE INVITATION OF THE LEGISLATURE TO PRINCE HENRY OF PRUSSIA TO MEET THE GENERAL COURT IN JOINT CONVENTION ON THE OCCASION OF HIS FORMAL RETURN OF THE GOVERNOR'S CALL AT THE STATE-HOUSE ON THE 6TH OF MARCH, WHICH WAS ADOPTED IN THE SENATE BY A RISING VOTE WITHOUT DISSENT.

DELEGATES FROM VARIOUS LABOR ORGANIZATIONS, ESTIMATED TO BE ABOUT 700 STRONG, APPEARED BEFORE THE COMMITTEE ON CONSTITUTIONAL AMENDMENTS TO SUPPORT A PETITION THAT AMENDMENTS TO THE CONSTITUTION MAY BE SUBMITTED TO THE VOTERS OF THE COMMONWEALTH UPON PETITION OF 50,000 LEGAL VOTERS.

THE GOVERNOR WAS DIRECTED TO APPOINT A COMMITTEE OF THREE PERSONS TO EXAMINE AND CONSIDER THE STATE LAWS IN RELATION TO THE FORMATION, TAXATION, AND CONDUCT OF ALL CORPORATIONS, EXCEPT THOSE OF THE COMMONWEALTH AND CORPORATIONS MORE ADVANTAGEOUS TO IT AND TO THE PUBLIC INTEREST.

AN ACT CALLING FOR THE APPOINTMENT OF A COMMITTEE TO INVESTIGATE THE CONDITIONS AND CONDUCT OF THE PUBLIC SCHOOLS PROVIDES THAT ITS MEMBERS...
shall be taken from those already in the public service, and that no additional compensation shall be given.

A State board of publication was created in accordance with the recommendation of the message. The Cattle Commission was abolished, and Austin Peters, for several years its chairman, was appointed chief of the Cattle Bureau of the State Board of Agriculture.

In accordance with the suggestions of the message, the committee recommended these other changes: That the offices of pension agent and State-aid agent to be merged in the new office of State Aid Commissioner; that the office of State fire marshal be abolished and its duties given to a division of the State police; that the office of inspector-general of fish be abolished; and that of the inspector of gas-meters be abolished and its duties given to the Gas Commissioners.

A bill respecting banks provided that after July 1, 1904, no incorporated savings-banks shall occupy the same office or offices with a national bank, or any office directly connected by doors or other openings in partitions with the offices occupied by any national bank or other banks of discount. After the same date no president, vice-president, or treasurer of a savings-bank shall hold similar offices in a national bank or any similar institution.

Other enactments were: Making vaccination compulsory; regulating the speed of automobiles and prescribing for their management, so as to prevent accidents; providing that elevators running more than 100 feet a minute must be in charge of persons eighteen years of age or over, and other elevators must be in charge of persons sixteen years of age or over; providing that a married woman under twenty-one years of age may convey lands as if she were of age; providing that the succession tax shall be assessed on the value at the time the right of possession falls; and the value of existing life estates and estates for years is to be deducted; making it "unlawful for any person to advertise in a newspaper circulated in this Commonwealth, or by any other means, to perform or to procure the performance of the marriage ceremony"; authorizing cities and towns to appropriate money for celebrations of greeting to returning sons and daughters and other invited guests, and for addresses and ceremonies of historical interest.

Provision was made for a memorial statue of George Washington on the State House grounds.

In accordance with an act providing for three additional judges for the Superior Court, the Governor appointed Charles A. De Courcy, Robert O. Harris, and Lemuel L. Holmes. William C. Wait was appointed to fill the vacancy caused by the death of Justice John Hopkins.

The Governor vetoed a bill for nearly $35,000 for launching river in Harwich, as extravagant and wasteful.

Among the bills defeated was one for abolishing capital punishment, and one for preference of Spanish War veterans.

**Requisition for a Criminal.**—It was reported in August that the Governor had refused to honor a requisition of the Governor of North Carolina for a negro who was under indictment for arson in that State. It was true that the negroes were made against delivering up the negro on the ground that he would be lynched; that though the Governor of North Carolina had promised him protection the fact that two negroes had been lynched during his administration, when he had made vigorous attempts to stop the crime, showed that there was no certainty that he would be able to afford protection. A hearing of the protests was held before the Attorney-General; in the end, the requisition was honored.

Political.—There were 5 tickets in the field for the State election this year—Republicans, Democratic, Socialist, Socialist-Labor, and Prohibition.

The Democrats met in convention at Boston, Sept. 17. Following is the ticket named: For Governor, William A. Gaston; Lieutenant-Governor, John C. Crosby; Secretary of State, William B. Stone; Treasurer, Thomas C. Thatcher; Auditor, J. L. Challifoux; Attorney-General, John J. Flaherty. Some changes were made in the ticket later.

The nominations and the platform, which was adopted after they were made, were a triumph for that part of the party opposed to the Kansas City platform and to Mr. Bryan. There was a minority report from the Committee on stump- ing, offering a platform, which was read by George F. Williams, approving the Kansas City platform and reaffirming the principles advocated by the platform in the North Dakota and the Maine campaigns. The majority report, which was adopted, made no reference to these. It declared that the supremacy of the State over its corporate creatures, the trusts, must be asserted and maintained; that tariff duties should be reduced to a reasonable revenue basis; and that duties on raw materials, particularly on coal, iron ore, wool, and hides, should be reduced; that the reciprocity policy and demands reciprocity with Canada; demands the repeal of the tariff duties upon articles whose production is controlled by trusts; condemns the coal operators for refusal to submit differences with employees to arbitration; denounces the Republican Congress for failure to give tariff concessions to Cuba; opposes all forms of Government subsidies, whether on land or on sea; reaffirms opposition to colonial imperialism; and declares that the State, in connection with the city of Boston, should join in the work of harbor improvements.

In Boston, Oct. 3, the Republicans named the following candidates: For Governor, John L. Bates; Lieutenant-Governor, Curtis Guild, Jr.; Secretary of the Commonwealth, William M. Olin; Treasurer and Receiver-General, E. S. Bradford; Auditor of Accounts, Henry E. Turner; Attorney-General, Herbert Parker.

The platform approves the gold standard, and says of trusts: "These combinations of labor and capital, by whatever name they are called, are the natural results of modern economic development and are entitled to the due protection of the law so long as they are innocent and law-abiding. Publicity, honest accounting, issuing stock only for its true value, the prohibition of improper devices to break down competition and severe penalties for corrupt interference, combined with legislation by the use of money or other employment will protect the public against injury from large combinations of capital." The Democratic plan of free trade in the products made by trusts is opposed as meaning the greatest possible injury to all the competitors of trusts. The anthracite-coal strike is deplorable, but it is declared not to be a political question and should not be used as such. President Roosevelt's efforts toward ending the strike are heartily approved. The platform concludes with a commendation of Gov. Crane's administration.

The candidate for Governor of the Socialists was John C. Chase; of the Socialist-Labor party.
UNITED STATES OF AMERICA (MICHIGAN)

Michael T. Berry; of the Prohibitionists, William H. Partridge. The platform of the Socialist-Labor party denounced the capitalist class and declared that the Republican and Democratic parties are the friends of the capitalist class, while the Socialist-Democrats are the 'stool-pigeons of both.'

The election was held Nov. 2, and resulted in the success of the Republican ticket. The vote for Governor was: Bates, Republican, 196,276; Gaston, Democrat, 159,156; Chase, Socialist, 33,629; Berry, Socialist-Labor, 6,078; Partridge, Prohibitionist, 2,538.

The Executive Council consists of the following members from the 8 districts of the State: David F. Slade, Arthur A. Maxwel1, Edwin R. Hoag, Jeremiah J. McNamara, David I. Robinson, Walter S. Watson, Arthur H. Lowe, Richard W. Irwin.

Republicans were chosen to Congress in all but 4 of the 14 districts; but notice of contest has been served by the Republican candidate in the Ninth District, in Boston. The surprise of the election was the large Socialist vote which was only a trifle over 210 per cent. over that of 1901. In Haverhill and Brockton the party was especially strong. The two Representatives in the last Legislature, from Rockwell and Rockland, were reelected, and another Socialist was added by Brockton.

MICHIGAN, a Western State, admitted to the Union Jan. 26, 1837; area, 58,951 square miles; population, according to the last decennial census since admission, was 212,267 in 1840; 397,654 in 1850; 749,113 in 1860; 1,118,059 in 1870; 1,656,837 in 1880; 2,062,886 in 1890; and 2,429,982 in 1900.

Government.—The following were the State officers in 1902: Governor, Aaron T. Bliss; Lieutenant-Governor, Orrin W. Robinson; Secretary of State, Fred M. Warner; Treasurer, Daniel McCoy; Auditor, Perry F. Powers; Attorney-General, Horace M. Oren; Superintendent of Public Instruction, Deles Fall; Commissioner of the State Land Office, E. A. Wildes; Adjutant-General, George H. Brown; Labor Commissioner, Scott Griswold; Bank Commissioner, George L. Maltz; Insurance Commissioner, James V. Berry; Railroad Commissioner, Chauncey S. Pomeroy; State Commissioner, James C. McClaughlin, A. F. Freeman, William T. Dust, Ira T. Sayre, Graham Pope; Coal-Mine Inspector, Charles Atwood; Game Warden, Grant M. Morse; Secretary of the Board of Charities, L. C. Storrs; Fish Commissioner, Horace W. Davis; Chief Justice of the Supreme Court, Frank A. Hooker; Associate Justices, Joseph B. Moore, Claudius B. Grant, Robert M. Montgomery, and Charles D. Long, who died June 27; his successor is William L. Carpenter; Clerk, Charles C. Hopkins. All are Republicans.

The term of the State officers is two years. They are elected in November of the even numbered years. The Legislature, consisting of 32 Senators and 100 Representatives, meets biennially in January of the odd numbered years.

Finances.—By the Auditor's report submitted in December it is shown that the balance at the beginning of the year was $2,827,553.84; the receipts from the State Treasury from all sources in the year ending June 30 were $7,079,429.21; the disbursements for all purposes, $6,233,141.91; the balance at the close of the fiscal year, $3,435,811.14.

The transactions of the tax division were unusually satisfactory as regards the collection of delinquent revenues. The amount paid into the division was $892,555.54, against $417,556.61 the previous year. The local taxes collected amount to $440,534.80, against $272,900.02 the year previous.

A total of $1,892,347.71 in specific taxes was collected from companies, the railroads paying $1,430,434.82.

The receipts were larger than usual on account of the money received from the General Government on account of the Spanish War and other claims. The Secretary of State received fees sufficient to pay the entire expenses of that department. A total of $84,915.42 was received, of which sum $55,933.61 was franchise fees, $3,688.65 for recording and filing articles, and $1,696.43 for charges against building and loan associations.

The Insurance Department received for the year ending June 30, 1902, $323,027.01.

The Land Commissioner's office received for the year ending June 30, 1902, $105,251.74.

The outstanding bonded indebtedness on account of Spanish-American War bonds is $416,300, and the amount of money in the State treasury available for the payment of these bonds in $473,311.92.

The total tax levy for 1902 was fixed at $2,669,943.65—more than $1,000,000 less than that of the year next preceding. The various purposes for which the tax is levied is distributed to each are as follows: University, $307,525; Agricultural College, $100,000; State Normal College, $124,491.40; Central Normal School, $45,000; Northern Normal School, $27,630; Michigan College of Mines, $97,875; State Library, $12,000; Soldiers' Home, $124,000; Home for the Feebleminded and Epileptic, $85,000; State Public School, $32,500; School for the Deaf, $30,500; School for the Blind, $30,700; Jackson Prison, $4,000; Industrial School for Boys, $72,750; Industrial Home for Girls, $59,750; State Fish Commission, $31,000; compiling records of Adjutant General's office, $1,250; dairy and food department, $25,000; Michigan Dairymen's Association, $300; Library Commission, $800; National Guard, $139,849.10; Navy; Food Commission, W. E. Snow; Salt Inspector, F. P. Dunwell; Commissioner of Mineral Statistics, T. A. Hanning; President of the State Board of Health, Fred A. Vought; Commissioner, James C. McClaughlin, A. F. Freeman, William T. Dust, Ira T. Sayre, Graham Pope; Coal-Mine Inspector, Charles Atwood; Game Warden, Grant M. Morse; Secretary of the Board of Charities, L. C. Storrs; Fish Commissioner, Horace W. Davis; Chief Justice of the Supreme Court, Frank A. Hooker; Associate Justices, Joseph B. Moore, Claudius B. Grant, Robert M. Montgomery, and Charles D. Long, who died June 27; his successor is William L. Carpenter; Clerk, Charles C. Hopkins. All are Republicans.

The term of the State officers is two years. They are elected in November of the even numbered years. The Legislature, consisting of 32 Senators and 100 Representatives, meets biennially in January of the odd numbered years.

Finances.—By the Auditor's report submitted in December it is shown that the balance at the beginning of the year was $2,827,553.84; the receipts from the State Treasury from all sources in the year ending June 30 were $7,079,429.21; the disbursements for all purposes, $6,233,141.91; the balance at the close of the fiscal year, $3,435,811.14.
twenty-seven months. "Previous to Sept. 23, 1899, Michigan was the dumping-ground for so-called graduates of fake and irreputable colleges, over 200 of whom had registered in one county of this State alone. Not only has this law entirely cut off the undesirable future supply, but has caused this class of practitioners already in the State to either abandon the practise or properly qualify themselves.

The State Prison.—The Board of Control of Jackson Prison established a rule in April prohibiting corporal punishment in the institution.

One of the amendments adopted at the November election was to empower the Legislature to enact a law for indeterminate sentences, a law of 1889 to that effect having been found to be unworkable.

Railroads.—The total main-line mileage in the State is 8,199.43, an increase of 253.49 over that of the previous year. The commissioner says the statistics of earnings indicate an increase of about 9 per cent. over those of last year.

In 1901 there were 162 persons killed and 633 injured. This is the greatest number in the history of the single exception of 1900, when 254 were killed. Of the number killed last year, 28 were passengers, being 1 passenger for every 525,406 passengers carried.

A total of 82 companies reported to the Department for the year. Of these 62 were regular operating companies. All were in first-class financial condition. In addition to paying interest on indebtedness, companies declared dividends.

Under the repeal act of the last Legislature the Michigan Central was required to reduce its passenger fares to 2 cents a mile. The earnings of the passenger-trains on such line being $2,000 more than the road operated. It was found that the passenger Income of the Detroit, Grand Haven, and Milwaukee was in excess of $2,000 a mile of road operated, and a case is pending in the Wayne Circuit Court to require this company to reduce its passenger rates to 2 cents a mile.

Articles of association were filed by 15 railroad companies.

A law of the last Legislature changed the system of taxation. Heretofore the railroads have paid a certain percentage on their gross earnings, but hereafter the tax will be computed upon the value of their property, like ordinary taxpayers.

The State Tax Commission fixed the valuation of the roads, making a total of about $209,212, 006, which it computed further increased by $21,550,312.2. The amount of tax assessed against the railroads this year under this system is $1,482,906.84.

Banks.—An abstract of reports of the 213 State and 85 national banks and 3 trust companies. Feb. 23, shows increases over the report made Dec. 10, 1901, as follows: Loans, discounts, bonds, mortgages, and other loans, $3,307,066.78; commercial deposits in State banks, $155,337,62; commercial deposits in national banks, $154,108.30; savings deposits in State banks, $2,093, 132.92; total increase in deposits, $3,194,277.44.

The City Savings-Bank, of Detroit, failed in February. The vice-president was tried on a charge of fraudulently securing from the bank more than $1,000,000, and was convicted and sentenced to fifteen years' hard labor in prison.

Building and Loan Associations.—The number of these in the State is 63; they have a membership of 31,757, and a capital valued at $9,266,764. The Attorney-General is endeavoring to exclude from the State certain so-called home-purchasing associations believed to be fraudulent.

Insurance.—A report of the financial condition and business of companies of other States doing business in Michigan in 1901 shows the following totals: Paid-in capital, $64,082,475; admitted assets, $312,935,468.39; liabilities, $1,835,980,946.51; divisible surplus, $96,770,816.65; taxes paid in Michigan, $161,041.27; fire risks written, $427,572,100; fire premiums received, $3,367,451; fire losses paid, $3,159,304; fire losses incurred, $2,991,091; marine risks written, $2,130,082; marine premiums received, $238,077; marine losses paid, $126,014; marine losses incurred, $1,465,152. The per cent. of losses to premiums received was 68 against 62 for the years 1899 and 1900.

The commissioner says: "The fact that during the past eighteen months 58 companies, representing an aggregate capital of $3,000,000, have retired from Michigan, coupled with the further fact that their places have not been taken by other companies, and that the companies which continue to do business in the State have reduced their lines fully 30 per cent., presents the anomaly in insurance economics of a constantly increasing demand with just as constantly decreasing supply, of the single commodity."

The commissioner urges amendments to the insurance laws that will relieve double taxation on premiums in case of reinsurance. The number of companies authorized to do business in the State is 146, there being 2 Michigan companies, 26 of foreign countries, and 108 of other States.

Industries and Products.—The farms of the State on June 1, 1900, numbered 206,261, and were valued at $832,317.10, of which amount 70 per cent. represents the value of buildings, and 73 per cent. the value of the land and improvements other than buildings.

According to statistics compiled by the Department of Agriculture, Michigan is now the leading State in sugar-beet acreage, having a total area this year of 68,000 acres, an increase of 79 per cent. over last year. Statistics of the Sugar Manufacturers' Association give the following items: The total daily capacity of the 13 Michigan factories is 6,600 tons of beets; the total investment is $7,700,000; 64,000 tons of beets were harvested; and the crop weighed 597,600 tons. The average value of the ton was $3.20, making the amount paid to farmers $3,107,350. The average cost of a ton was $154.60, the net profit per ton was $6.30. Freight must be deducted from this profit. The average output of sugar per ton of beets at the Michigan factories is 210 pounds; this valuation is 210 pounds.

In the census year there were 286 butter and cheese factories and creameries in the State, of which 146 were cheese. Michigan stands fifth in cheese production, the value having more than doubled since 1890. In the year 18,578,809 pounds of condensed milk was produced, nearly four times as much as in any other State. The value of all products of the 299 factories was $3,918,963.

The figures for the manufactures of the State in 1900 are: Number of establishments, 16,906; capital, $264,047,333, an increase of 5 per cent.; value of products, $336,087,412, an increase of 6 per cent. There were 106,356 wage-earners, 866,458,494 of wages, $25,401,813 of miscellaneous expenses, and $100,133,711 was the cost of materials used.

Michigan, which was the first among the States in the production of iron ore, is now second to Minnesota. The total production in 1901 was 5,294,587 tons, and in 1900 it was 5,044,500 tons, showing a marked increase. The total production of 1901 was 5,104,530 short tons, valued at $4,144,756. The State is credited with producing gold of the value of $30,000 and $48,000 worth of silver.
The wooded area of the State is 38,000 square miles. A forest reserve has been established in Rosecommon and Crawford Counties, at the head waters of the principal rivers of the lower peninsula.

**Legal Decisions.**—The act of the last Legislature increasing the salaries of the State Treasurer, Land Commissioner, and Secretary of State, was declared invalid by the Supreme Court in its denial of a mandamus to compel the Auditor to pay the increase.

The decision against the Illinois antitrust act virtually applies to that of Michigan.

**The Sault Canal.**—This was opened Oct. 25. Statistics of the work are given in brief as follows:

- Length of canal, 13,000 feet; time consumed in construction, four years; cost, $7,000,000.
- Power developed, 60,000 horse-power; average width of canal, 300 feet; width at bottom, 104 feet; width at top, 215 feet; width of intake, 950 feet; depth of water, 23 feet; fall, 20 feet; velocity of current, 41 miles per hour; volume of flow, per second, 30,000 cubic feet; number of turbines, 320; size of power-house, 1,300 by 125 feet.

From an account of the opening celebration the following is taken: "In the military and civic parade in the morning there were over 10,000 men, including the garrison employed in the Clergue works across the river. The afternoon industrial parade showed the various products of the Clergue works in all stages from raw material to finished articles. The farmers of Chippewa County were much in evidence, having in the parade 250 wagons loaded with the produce of their lands. The historical section showed the Soo in all sizes and conditions of transportation. The present population, clad in Prince Albert coats and silk hats. This canal is the greatest hydraulic power plant in the world. Starting in the lower arm of Lake Superior, it passes straight through the heart of the city, and by a magnificent true curve debouches into the St. Mary's river a mile below the rapids."

The American side of the river most of the power is to be devoted to two distinct lines of industry, calcium-carbide and alkali works.

By the invention of a distinguished scientist named Rhodin, a method has been devised for decomposing common salt by electrical current into chloride gas and caustic soda. The American works will employ about 2,000 men. Three hundred and fifty working men of different trades are employed in the plant, and many workers are added as the various departments of the works are completed. The operation of the works will be conducted on a large scale, and the annual output of chlorine will be consumed daily and transformed from a substance worth $2.50 a ton to products worth $25 a ton.

The storage-battery plant is the largest of its kind in the world. It has a capacity for the storage of 25,000 electrical horse-power.

**Political.**—The Republican State Convention, in Detroit, June 20, nominated Gov. Bliss for a second term. The other nominations were:

- Lieutenant-Governor, Alexander Maitland; Secretary of State, Fred M. Warner; State Treasurer, Daniel McCoy; Auditor-General, Perry F. Powers; Attorney-General, Charles A. Blair; Commissioner State Land Office, Edwin A. Wildy; Superintendent of Instruction, Delos A. Fall; Members State Board of Education, Patrick H. Kelley, L. L. Wright.

The platform commended the national administration, reaffirmed the principles of the party, and favored reform in primary elections. On the trust question it said: "We realize that large combinations of capital may be necessary, but we desire to express our condemnation of all conspiracies and combinations to restrict business, to create monopolies, to limit production, or control prices, and we favor such legislation as will effectually restrain and prevent all such abuses. We cordially approve and commend the efforts of President Roosevelt to enforce the law against illegal combinations in restraint of trade."

A special convention was held in Grand Rapids, Sept. 25, to nominate a candidate to succeed Judge Charles D. Long, of the Supreme Court, who died June 27. William L. Carpenter was nominated. The candidacy of Gen. Russell A. Alger to succeed the late Senator McMillan was approved, and he was appointed by the Governor "to serve until his successor is chosen by the Legislature."

The Democratic Convention met in Detroit, July 30. Following is the ticket: For Governor, George H. Durand; Lieutenant-Governor, John F. Bible; Secretary of State, John Donovan; State Treasurer, W. F. Davidson; Auditor-General, David A. Hammond; Land Commissioner, Arthur F. Watson; Attorney-General, W. F. McKnight; Superintendent Public Instruction, W. N. Ferris; Member State Board of Education, Charles F. Field; Justice of Supreme Court, Benjamin J. Brown.

Later, George H. Durand withdrew on account of failing health, and his brother, L. T. Durand, was chosen to take his place.

The resolutions adopted by the convention demanded the destruction of boshism in Michigan; favored primary election reform; election of the United States Senators by direct vote; adoption of the system called the initiative and referendum; equal taxation and equitable assessment; municipal ownership of all public utilities; and adequate compensation for Indian claims.

The convention also decreed "to make a strong effort to be made on the contemplated suit of the Michigan Central against the State on account of the repeal of the charter of the road."

Candidates were named by the Prohibitionist, Socialist, and Social-Labor parties also.

The Republican State ticket was successful throughout. The vote for Governor stood: Bliss, Republican, 211,281; Durand, Democrat, 174,077; Westernman, Prohibition, 11,328; Walter, Socialist, 4,871; Conlin, Social-Labor, 1,284. The other Republican candidates received larger pluralities, Judge Carpenter's being 76,104.

Republicans were chosen to Congress in all the districts except the 1st, where T. H. Pendleton, Democrat, was elected. The Legislature will stand on joint ballot 121 Republicans to 11 Democrats.

Two proposed constitutional amendments were submitted, one relative to the publishing of all the general laws of any session in a newspaper, abolishing the provision for payment; the other, empowering the Legislature to enact a law imposing indeterminate sentences as a punishment for crime, and to provide for the parole and return to prisons of persons imprisoned on such sentences. Both were carried, the former by a majority of 50,596, the latter by 68,087.

**MINNESOTA, a Western State, admitted to the Union May 11, 1858; area, 84,287 square miles. The population, according to each decennial census since admission, was 172,023 in 1860; 430,706 in 1870; 780,773 in 1880; 1,301,826 in 1890; and 1,751,394 in 1900. Capital, St. Paul.**

**Government.**—The following were the State officers in 1902, taking office the first Monday in January, 1901: Governor, Samuel R. Van Sant; Lieutenant-Governor, Lyndon A. Smith; Secretary of State, Peter E. Hanson; Auditor, Robert C. Dunn; Treasurer, Julius H. Block; Attorney...
General, Wallace B. Douglas; Commissioner of Insurance, Elmer H. Dearth; Adjutant-General, William A. Fay; Inspector, L. D. Marshall; Commissioner of Labor, John O'Donnell; Public Examiner, Sam T. Johnson; Chief Justice of the Supreme Court, Charles M. Stahl; Attorney-General, John A. Lovejoy, Calvin L. Brown, Charles L. Lewis; Clerk of the Supreme Court, Darius F. Reese; Railroad and Warehouse Commissioners, Ira B. Mills, Charles F. Staples, and Joseph G. Miller—all Republicans.

The Governor, Lieutenant-Governor, Secretary of State, Auditor, Treasurer, and Attorney-General are elected every two years. The Railroad Commissioners are elected for six years, but the present board, the first elected, was so arranged that one term expires biennially. The Insurance Commissioner, Adjutant-General, Labor Commissioner, and Grain Inspector are appointed by the Governor for two years; the Public Examiner for three years.

The judges of the Supreme and district courts are elected by the people for six years. The clerk of the Supreme Court is elected every four years. The other court officers are appointed by the judges, except the deputy clerk and his assistants, who are appointed by the clerk of the court. State officers are chosen in November of even years. The Legislature convenes in January of odd years, and the session is limited to ninety legislative days.

Finances.—For the fiscal year ending July 31, 1902, the receipts of the State treasury were $7,305,443.94, and the disbursements $7,292,850.12, leaving a balance of $2,212,583.06. The balance July 31, 1901, was $2,000,343.24.

The State debt was $1,068,000, having been reduced $140,000 during the year. It has since been reduced to $966,000 Dec. 31, 1902. The permanent school and university funds were respectively $14,316,388.00 and $1,334,035.55.

The principal classifications of the treasury receipts for the year were: Revenue fund, $4,501,045.46; permanent school fund, $1,217,219.13; general school fund, $1,237,388.45; general university fund, $375,775.08; the disbursements were school fund, $931,455,936.00; permanent school fund, $1,252,422.01; general school fund, $1,153,602.46; general university fund, $402,592.01. The amount of railroad taxes paid was $1,659,296.40. The total amount of taxes paid through the State Insurance Commissioner's office was $216,515.88.

Charities and Corrections.—The new board of Control, appointed by the Governor, and consisting of William L. Lee, S. W. Leavitt, and C. A. Morey, took charge of charitable and correctional institutions Aug. 1, 1901, and for the first fiscal year reduced the cost to the State $1,870,000. The population of these institutions Aug. 1, 1902, was: Insane, 3,792; distributed as follows: Anoka Asylum, 135; Hastings Asylum, 15; St. Peter's Hospital, 9; Nisswa, 1,457; Rochester Hospital, 1,121. The asylums are for chronic cases. School for the Deaf, 254; School for the Blind, 74; School for the Feeble-Minded, 817; State Public School, 248; State Training School, 526; State Reformatory, 192; State Prison, 553.

Lands.—The influx of settlers from the older and more crowded portions of the United States, which grew to large proportions in 1901, continued throughout 1902, and land values increased in a corresponding degree. The average value of State school lands paid was $76.75 per acre, as compared with $73.75 per acre in the year previous. The full amount permitted by law, 100,000 acres, was sold. Practically every acre of known mineral land in the State is now leased. Sales of bonds held by the State. Prospecting is continuing, and new areas are being added to the mineral values frequently. Some state pine still remains to be sold, and during the year $5,000,000 was allowed by the State. The stumpage averaged 85 per thousand feet. The permanent school fund, which is derived from the sale of State lands and the revenue from timber and mineral leases, amounted July 31, 1902, to $14,316,388.00, of which $8,289,230.65 was invested in the bonds of other States and of Minnesota school districts; $5,850,873.12 in outstanding land contracts; and $350,050.40 was paid out on account of school plant, and $6,062,750.00 in cash.

The permanent university fund amounted to $1,334,035.55 and the internal improvement fund to $2,816,996. A new fund derived from the sale of swamp lands allotted to the State institutions amounts to $288,905.

Products.—In the past year 36 new creameries have been established, making a total of 68. These made 63,756,450 pounds of butter out of 1,217,787,450 pounds of milk, produced by 382,356 cows. The butter output per cow was considerably increased over the year previous. The creameries paid to their 60,538 patrons $10,862,743.50 in cash, besides 3,988,791 pounds of butter. The total value of the butter product of the State is figured at $15,808,887.76. There was shipped out of the State 42,525,000 pounds of butter, practically two-thirds of the product.

The chemists of the Dairy and Food Commission made more than 10,000 analyses of food samples, of which about one-fourth were found to be below the standard required by law.

The ore product of the Missabe and Vermilion iron ranges had a phenomenal increase, the total shipments being 13,401,191 tons, against 11,786,983 tons the year previous.

While the wheat acreage decreased from 4,250,000 acres in 1901 to 5,960,000 acres in 1902, the average yield was increased from 12.5 to 13.7 bushels per acre, making the crop of that staple 82,150,000 bushels, as against 78,000,000 in 1901. The decrease in wheat acreage was more than made up by the increase in the amount of wheat grown as to that crop are not systematically gathered.

Education.—There are in the State 141 high schools, and each receives special State aid of $1,000. The total expenditure paid during the year ending July 31, 1902, was $15,410; the number of graduates was 1,877. There are 119 graded schools of not less than four departments, employing 607 teachers. In addition to these there are 92 graded schools of either two or three grades, employing 308 teachers.

In the University of Minnesota there are 3,729 students, including 1,044 women. The students are distributed as follows: College of science, literature, and the arts, 1,178; engineering and mechanical arts, 345; school of mines, 109; agricultural department; 504; medical college, including pharmacy and dentistry, 531; summer school, 237; graduate students, 176.

The annual resources for current expenses are $410,000; invested funds, $1,334,035.55.

Labor.—In the last year this department has been pursuing, in addition to its factory inspection, a special inquiry into the condition of women wage-workers, and has sought to determine the causes underlying the aversion of women for housework. This inquiry has included an inquiry of the employers, as well as of the employees, and while it has not been unusually fruitful, is believed to promise some success.
Legislative Session.—The Legislature convened Feb. 4, 1902, in special session, and adjourned March 11, being in session twenty-nine days. The principal business before it was the new code of tax laws, prepared by a commission appointed at the preceding session. The new code failed of passage.

The Republican State Convention was held in St. Paul, July 1. The important planks of the platform were these:

- Approving the administration of President Roosevelt, including the administration of civil government in the Philippine Islands.
- Adhering to the policy of protection.
- Favoring the wider extension of markets for the sale of all American products.
- Favoring reciprocity with Cuba.
- Favoring legislation, national and State, to prevent combinations which stifle competition, limit production, control prices, or unduly increase profits or values.
- Favoring the most stringent legislation for the suppression of anarchy.

Our faith in the gold standard has been amply justified by the wonderful strides of American industry and commerce.

The following ticket was nominated: For Governor, Leonidas F. Stewart; Secretary of State, Peter E. Hanson; Auditor, Samuel G. Iverson; Treasurer, Julius H. Block; Attorney-General, Wallace B. Douglas; Attorney General, C. A. Pidgeon; Railroad and Warehouse Commissioner, Charles F. Staples.

The Democratic State Convention was held in Minneapolis, June 29. The principal planks in the platform were:

- Demanding independence for the Philippines.
- For the enforcement of the laws against trusts and the revoking of the tariff benefits they enjoy.
- Favoring the income tax and postal savings-banks.
- Opposing government by injunction.
- Favoring municipal ownership of public-service corporations.
- Favoring the election of Senators by direct vote.
- Favoring the eight-hour work day.

The following ticket was nominated: For Governor, Leonard A. Rosing; Lieutenant-Governor, Robert A. Smith; Secretary of State, Spurgeon C. Colvin; Attorney-General, Frank D. Larrabee; Treasurer, Joseph L. Meyers (Meyers declined, and the State Central Committee substituted H. L. Shirley); Clerk of the Supreme Court, George P. Jones; Railroad and Warehouse Commissioner, J. M. Bowler.

The Republican ticket was elected, the vote on Governor being: Van Sant, Republican, 155,849; Rosing, Democrat, 99,302; Scanlon, Prohibition, 5,765; Meighen, People's party, 4,821; Van Lear, Socialist Labor, 2,570; Nash, Socialist, 2,251; Van Sant's plurality, 56,487.

Mississippi, a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 75,448 in 1820; 130,621 in 1830; 335,851 in 1840; 600,526 in 1850; 791,305 in 1860; 827,922 in 1870; 1,131,507 in 1880; 1,289,600 in 1890; and 1,551,270 in 1900. Capital, Jackson.

The following were the State officers in 1902: Governor, A. H. Longino; Lieutenant-Governor, J. T. Harrison; Secretary of State, Joseph W. Power; Treasurer, George W. Carville; Auditor, W. Q. Cole; Superintendent of Education, H. L. Whitfield; Attorney-General, Monroe McClurg; Adjutant-General, William Henry; Land Commissioner, E. H. Nall; Revenue Agent, Wirt Adams; Railroad Commissioner, J. D. McNiss, J. C. Kincaannon, A. Q. May; Chief Justice of the Supreme Court, Albert H. Whitfield; Associate Justices, S. H. Terral, S. S. Caboon; Clerk, Edward W. Brown. All are Democrats.

The term of the State officers is four years; they are chosen in November of the years next preceding those of the presidential elections. The Legislature meets biennially the first Tuesday after the first Monday in January of the even-numbered years. Every second session is a special session, the regular sessions coming quadrennially. The length of a special session is limited to thirty days unless it is extended by the Governor; and only appropriation and revenue bills may be considered unless the Governor introduces other subjects by message.

Finances.—Following is an unofficial statement of the condition of the funds in December. Indications point to the fact that on Jan. 1, 1903, there will be $60,000 in cash in the State treasury, after paying all outstanding warrants and all expenses to that date. This will be accomplished, according to Auditor Cole, without any further receipts nor any expenditures, where, and without issuing a dollar of the million dollars' worth of bonds authorized for the construction of the new State-House. By Feb. 1 $750,000 will be received from State taxes, ample to meet the common-school funds and other appropriations to be paid to that date. In the year $100,996.50 was paid to 6,680 Confederate pensioners. The present bonded debt of the State is given as $2,957,026.

Valuations.—The assessed value of realty this year is $145,719,108, an increase over 1901 of $14,402,287; the personal property valuation is $64,847,907, an increase of $1,411,421; that of railroads, $30,922,121, an increase of $2,326,063. The total, $240,598,259, shows an increase of $18,141,601. The increase for three years amounts to $527,130,217. The number of polls assessed in 1902 was 300,736, an increase of 8,357. "Of the 75 counties of the State, 67 show an increase in valuations, while 18 show a decrease. The most notable increases are from the southeastern part of the State, formerly called 'cow counties,' where the railroads have done away with the 'wagner,' by sawmills, new towns, and other enterprises."

The Treasurer's Office.—The shortage in the treasury (see Annual Cyclopaedia, for 1901, p. 722) was made the subject of a legislative investigation, and following is a part of the report: "We find that $100,000 of the $107,621,44 that was missing at the time the Governor made his count, in August, 1901, of the money in the State treasury had been loaned in Memphis at the rate of 3 per cent. per annum; said interest, when collected, was to be divided equally among Messrs. F. T. Raiford, Phil A. Rush, and John Armstead. This $100,000 so loaned had been brought from Memphis before the counting of the money in the State treasury by the Governor on two occasions, one time by John Armstead and the last by F. T. Raiford. We failed to find any trace as to the whereabouts of the $7,621,44 at the time the Governor and Auditor Cole counted the money in the treasury in August, 1901, and from the evidence that there were no bonds or security in the State treasury to cover the missing $107,621,44 at the time of the count made by the Governor; nor was there any evidence as to the whereabouts of said money at that time. We find
that the banks of Jackson, collecting checks and drafts and handling money for the State treasury, placed bonds, collateral, or securities with said banks covering all amounts so obtained from him."  

Indictments were found against the men named. The prosecution of Rush resulted in a mistrial. He will be tried again in 1903, when other trials also are to occur.

Mr. Carlisle, who was appointed after Mr. Stowers resigned, gave up the office Nov. 1, on the ground that it was too great a responsibility to have the care of such an amount in the treasury.

Education.—By the census report of 1900 there were in the State 501,461 illiterates. In the percentage of children from ten to fourteen years old who are able to read and write Mississippi stands forty-fifth, with 77.62 per cent. The school enumeration shows 530,439 this year, an increase for the biennial period of 40,427. The school term has been lengthened in most of the counties, only 5 at the beginning of this year having but the old four-months' term, others having from five to eight. Ninety towns in the State have organized into separate school districts with terms of nine months.

The enrolment at the Agricultural College for the ending year, 1905, shows the receipts of the Yanoo and Mississippi for the year ending June 30 were $6,658.55, an increase of 7.5 per cent.; the net receipts were $1,930,717.14, a decrease of 6.77 per cent.

The business of the Louisville and Nashville in the State for the first quarter showed receipts from all sources, $228,294.97; operating expenses, $123,806.14; net revenue after paying taxes, interest, etc., $55,893.12. This is an increase of $34,138.08 over last year.

Hattiesburg is now reached by the Mobile, Jackson and Kansas City road. This part of the State is developing rapidly.

Insurance.—There are 87 insurance companies, 8 guarantee companies, 12 accident companies, and about 60 fraternal orders doing business in the State.

The new insurance law passed at the last session of the Legislature requires more extensive reports from the companies than heretofore. A separate insurance department was created, and powers of the commissioner were enlarged. The present law affords greater security, providing that only capitalized companies may write fire insurance. The system of taxation is changed, the law now requiring a percentage tax on actual business.

A strong effort was made to have an extra session of the Legislature called in order to repeal the valued-policy clause of the law. The Governor even received an offer from Vicksburg to pay the expenses of the extra session. But he declined to call the session, as, from answers received to a circular letter to the legislators, he found that the law would not be repealed.

On the other hand, the insurance companies were emphatic against writing blanket policies on cotton if the Legislature should amend the law only in its application to that staple; demanding the repeal of the entire law. But in September the Mississippi Fire Association decided to insure cotton under the old blanket policy. The new method adopted by the companies in the spring was to insure cotton in bales only, by marks and numbers.

Industries and Products.—According to the census report, 61.5 per cent. of the land area of the State is included in farms. There were of these 220,803, valued at $152,907,000. Of this value, 24 per cent. represents the buildings and 76 per cent. discounts are $4,632,556.68; United States bonds to secure taxation, $1,012,500; United States bonds to secure United States deposits, $250,000; money in reserve, gold coin, $5,305.50; gold treasury certificates, $25,650; silver dollars, $99.29; silver treasury certificates, $29,117; silver fractional currency, $39,119.55; legal-tender notes, $374,128; capital stock paid in, $75,549.00; unappropriated surplus, $549,000; undivided profits, $3,552,489.20; average reserve held, 20.09 per cent.

The Auditor in his report of the State banks in July, says that this is the best showing made during his term. The number of banks reporting on July 15, 1901, was 117, compared with 129 for July 5, 1902. These institutions have capital stock ranging from $25,000 to $100,000. The total resources of the 129 banks is $26,544,946.33, compared with $23,948,412.12 for the 117 banks. Loans and discounts on personal securities amounted to $17,386,114.30. Under the heading of liabilities, capital paid in is placed at $3,465,080.33, an increase of $577,968.10 and an average of about $44,000 for each of the 12 new banks established.

Railroads.—The mileage of roads in the State was increased by 127 in 1902; in 1901, the increase was 289. The real estate receipts of the Yazoo and Mississippi for the year ending June 30 were $46,800.50, an increase of 3.6 per cent.; the net receipts were $1,930,714.14, a decrease of 6.79 per cent.

The business of the Louisville and Nashville in the State for the first quarter showed receipts from all sources, $228,294.97; operating expenses, $123,806.14; net revenue after paying taxes, interest, etc., $55,893.12. This is an increase of $34,138.08 over last year.

Hattiesburg is now reached by the Mobile, Jackson and Kansas City road. This part of the State is developing rapidly.

Insurance.—There are 87 insurance companies, 8 guarantee companies, 12 accident companies, and about 60 fraternal orders doing business in the State.

The new insurance law passed at the last session of the Legislature requires more extensive reports from the companies than heretofore. A separate insurance department was created, and powers of the commissioner were enlarged. The present law affords greater security, providing that only capitalized companies may write fire insurance. The system of taxation is changed, the law now requiring a percentage tax on actual business.

A strong effort was made to have an extra session of the Legislature called in order to repeal the valued-policy clause of the law. The Governor even received an offer from Vicksburg to pay the expenses of the extra session. But he declined to call the session, as, from answers received to a circular letter to the legislators, he found that the law would not be repealed.

On the other hand, the insurance companies were emphatic against writing blanket policies on cotton if the Legislature should amend the law only in its application to that staple; demanding the repeal of the entire law. But in September the Mississippi Fire Association decided to insure cotton under the old blanket policy. The new method adopted by the companies in the spring was to insure cotton in bales only, by marks and numbers.

Industries and Products.—According to the census report, 61.5 per cent. of the land area of the State is included in farms. There were of these 220,803, valued at $152,907,000. Of this value, 24 per cent. represents the buildings and 76 per cent.
the land and all improvements other than build-
ings. The total value of farm property is $204,-
221.027. Of the farms 41.7 per cent. were operated
by white farmers and 58.3 by colored. Of the
white farmers, 60.2 per cent. owned all or a part
of the farms they operated. The colored farmers
owned 16.3 of the farms they cultivated.

The cotton-crop in 1892 was 1,375,000 bales,
against 850,000 in 1901. The consumption in mills
of the State was 16,203,653 pounds of lint cotton.
There were 16 mills, with 3,821 looms and 127,772
spindles. Two new textile-mills, with 160 looms
and 10,120 spindles, were constructed in 1901. In
the census year there were but 2,464 looms. The
growth of the cottonseed-oil business is very rapid.
In the first half of the year, 19 new mills were
started, with $900,000 capital. There is a great
demand for Mississippi turpentine, and distilling
plants have been running day and night.

The forest area of the State is estimated at 32,-
300 square miles. The aggregate of capital stock of all concerns
incorporated in the fiscal year was $9,133,000.32,
subdivided as follows: Lumber companies, $1,127,-
000; oil and gas companies, $1,995,000.32; man-
ufactures, $1,686,000.22; oil-mills, $1,995,000.07; rail-
roads, of which 3 have already organized, $85,000;
3 cotton factories, $310,000; 150 miscellaneous cor-
porations, $2,882,000.

Lawlessness.—Lynchings have been reported this
year in Attala County and at Walnut Grove, Clay-
lon, Corinth, Columbus, Summit, and Dar-
ling. One negro woman was shot and two negroes
burned. The one burned at Corinth, Sept. 28, con-
fessed to an atrocious murder. The one burned at
Darling had, in company with 2 white men, mur-
dered a negro man whom they robbed. The one
burned at Clayton in July had assaulted a young lady.
A policeman attempting to arrest a negro running an unlicensed saloon at Summit in
November was shot by the negro, who escaped. But
2 negroes accused of assisting the escape were
captured and lynched. The negro lynched at Wal-
nut Grove had committed an assault on a white
woman, and the one at Columbus had attempted one.
Two negroes were lynched in Attala County in
September, accused of promoting dissension be-
tween the races.

Terrorist troubles have arisen this year in
Amite, Franklin, Pike, and Lincoln Counties.
The blacks have been terrorized by threats and
notices to give up their employment in mills or to
leave the mill-owner whom they robbed. The one
burned in Clayton was a negro who fled from a
proclamation, offering a reward for the arrest
and conviction of each and every one guilty of the
crime.

A race riot was reported from Tupelo in August,
with 6 persons seriously shot and others injured.

Indianola.—Trouble arose in this place near
the close of the year over the resignation, on com-
pulsion, of the negro postmistress, who has con-
ducted the office satisfactorily for several years,
but was objected to on account of her color. Her
resignation was not accepted, and the office was
ordered reappraised.

Legislative Session.—The Legislature met for
its special session Jan. 7. The limit of this ses-
sion is thirty days, unless the time is extended by
the Governor, as it was twice this year. Adjourn-
ment took place March 5. Adoniram J. Russell
was Speaker of the House.

The number of Senate bills passed and approved
was 120; House bills and resolutions, 103.

Three constitutional amendments were proposed
and submitted to vote in November. They were:
1. Authorizing a town or county, upon the vote of
a majority of its qualified electors who pay
taxes on $100 or more of property, to aid, by do-
nation or subscription, in building of new rail-
routes; 2, making the required vote to pass a
constitutional amendment a majority of those
voting, authorizing the Legislature to insert in the
Constitution an amendment which has been adopt-
ded, at its next succeeding session, and giving the
Legislature the power to determine finally wheth-
er an amendment has been adopted; 3, pro-
viding for regular biennial sessions of the Legisla-
ture, thus doing away with the present rule, which
makes every second session a special one, and en-
abling the Legislature to take up any subject, in-
stead of, as now, only those of revenue and appro-
priation and those introduced by the Governor.

The tax levy for the next two years was fixed
at 8 mills.

As the State is entitled, by the census, to 1
more Representative in Congress, the 7 districts
were redivided into 8. An additional judicial dis-
trict was created, making 11.

Among the more important bills passed were a
primary-election bill and one to provide for the
better enforcement of the antitrust law, which
was defective in some particulars. The new law
will be impossible of enforcement; also a new liquor
law, and a so-called "amnesty act" in regard to
the payment of privilege taxes.

A Board of Oyster Commissioners was created,
to consist of 5 members appointed by the Govern-
or, the full term of office being five years. They
are to receive, besides their expenses, $5 a day
while engaged, not to exceed twenty days in a
year. Oyster vessels of 1 ton burden gross must
be licensed by them. They are to elect a chief in-
spector at $100 a month, deputy inspectors, 3 or
fewer, at $50 for the canning season, and a secre-
tary at $800.

The office of Insurance Commissioner was crea-
ted. Heretofore his duties have been a part of
that of the Auditor's. Another office created was that of
Assistant Attorney-General.

A State Department of Archives and History
was created, to be established under the auspices
of the historical society, from which the 9 trustees
shall be chosen; and they shall elect a director to
serve at a salary of $1,600.

A portion of the Capitol grounds was set apart
as a Confederate Memorial Park, and certain state
officers were made a commission for its control.

Among other enactments were the following:

1. Providing that any cause of action, or any in-
terest therein, may be sold after suit is brought
thereon, like any other property

2. Raising the salary of the Governor and of
the judges of the Supreme Court to $4,500 each,
and that of the Adjutant-General to $800.

3. Appropriating $50,000 for an exhibit at the St.
Louis Exposition, and creating an exposition bu-
reau, to consist of 5 members appointed by him.
They are to appoint a commissioner who shall receive a salary of no

4. Authorizing the Board of Levee Commissioners
for the Yazoo-Mississippi Delta to levy a tax
upon all privileges exercised within the said levee
district, the taxes not to exceed those levied by the
State on the same privileges.

5. Repeal section 1575 of the code, and prevent
the granting of liquor licenses in towns of less
than 500 inhabitants having police protection.

6. Authorizing supervisors to provide for the chan-
nelling of streams.

A committee that had been appointed to investi-
gate the financial management of the Penitentiary
made a report severely criticizing the administra-
tion of the prison; finding that loose management
and unbusiness-like methods had prevailed; that it was "impossible, even with the most careful and long-continued examination of the books, to ascertain with any degree of accuracy whatever the results of former operations of the board," and that a "large tract of land had been cleared by convict labor for various parties with whom the Board of Control had no farming contracts whatever, and in whose lands the State had no interest whatever," together with other specifications. The Legislature passed a resolution directing the committee to begin investigating anew. A large amount of testimony was taken in open sessions, and the report, while it withdrew some of the charges and modified others, repeated the criticisms on the bookkeeping and the improper use of convict labor. Both houses merely received the report, refusing to adopt it, and discharged the committee. The Board of Control in charge of the prison consists of the Railroad Commissioners, the Governor, and the Attorney-General.

Congress was menaced for an appropriations for Gulfport harbor.

Resolutions were passed condemning the major- ity report of the court of inquiry in the case of Admiral Dewey, and commending that of Admiral Schley, and saying further: Resolved, by the Mississippi House of Representatives, that Admiral Schley is the real hero of Santiago, that he is one of the world's greatest naval commanders, and is entitled to the unfading gratitude of his country.

Resolved, further, that we extend a most cordial invitation to Admiral Schley to visit the State capital during his contemplated Southern tour, and receive a public manifestation of the exalted respect, confidence, and admiration in which he is held by the people of Mississippi.

A resolution of sympathy with the Boers passed both houses.

Another resolution instructed the representatives in Congress to support the bill for the purchase of Temple Farm and the Moore House at Yorktown, Va., by the Government. Still another requested the United States Fish Commission to investigate and report upon the oyster reefs in the State.

The Governor strongly recommended the establishment of a soldiers' home for the State, and it was desired to purchase for that purpose T. C. Davis' old home, Beauvoir. The Senate passed a bill to that effect, but it was defeated in the House.

A concurrent resolution was passed "That the following verses be adopted as the State ode":

For thy grand and varied hills,
For thy clear and rippling rills,
For thy wide and fertile vales,
For thy oaks, and glens, and dales—
I love thee, Mississippi.

With thy mists, and clouds, and storms,
With thy winds, and rains, and storms,
With thy snow, and hail, and sleet,
With thy sunshine and thy heat—
I love thee, Mississippi.

Where thy forests stand serenely,
Where thy prairies roll between,
Where thy rich plantations lie,
Where thy sedges fields—never die—
I love thee, Mississippi.

Brave thy men, thy women fair,
Boys and girls beyond compare,
Proud thy record, years gone by,
Bright thy record, years going by—
I love thee, Mississippi.

Place where first I saw the light,
Place where boyhood made its light,
Place where love and hope grew strong,
Place where home and friends belong—
I love thee, Mississippi.

Here, my heart, thy vigil keep;
Here, my dead, in quiet sleep;
Here, my life, ebb thou away;
Here, my bones, turn back to clay—
I love thee, Mississippi.

The appropriations amounted to $5,997,982, exceeding those of 1000, which were $4,074,284.

The amounts for the new Capitol are not included in either of these aggregates.

Political.—The primary-election law passed this year by the Legislature came before the courts and was pronounced constitutional. At the congressional election in November there was no opposition to the Democratic candidates. The 3 proposed amendments to the Constitution were defeated. The total vote polled was only 18,078, out of a voting population of 234,413.

Gulfport,—This city, the terminus of the Gulf and Ship Island Railroad, celebrated in November the arrival of the first seagoing steamship that ever touched there. For years the city has been a good port at Ship Island. Although this harbor afforded a shipping-point for the products of the mills of the Mississippi coast, its distance from the mainland and the necessity of employing lighter to handle freight limited the character of the business. A port on the mainland was desired, and that has at last been secured at Gulfport.

Missouri, a Western Mississippi valley State, admitted to the Union Aug. 10, 1821; area, 60,415 square miles. The population, according to each decennial census since admission, was 140,455 in 1830; 303,702 in 1840; 682,644 in 1850; 1,182,012 in 1860; 1,721,285 in 1870; 2,168,380 in 1880; 2,637,184 in 1890; and 3,106,605 in 1900. This is an increase since 1890 of 15.9 per cent. The city of St. Louis had in 1900 a population of 575,238. Capital, Jefferson City.

Government.—The following were the State officers in 1902: Governor, Alexander Monroe Dockery; Lieutenant-Governor, John W. Tate; Secretary of State, Samuel B. Cook; Auditor, Albert O. Allen; Treasurer, Robert P. Williams; Attorney-General, Edward C. Crow; Superintendent of Schools, John O. Laycock; Railroad and Warehouse Commissioners, Joseph P. Rice, John A. Knott, W. E. McCully; Superintendent of Insurance, Robert G. Yates; State Geologist, E. E. Buckley; Supervisor Building and Loan Associations, Luther S. Hickman; Commissioner of Labor Statistics and Inspection, William Anderson; Inspector of Coal Mines, Charles Evans; Inspector of other mines than coal, George K. Williams; Warden of Penitentiary, Frank M. Woodrige; Beer Inspector, Gyles Y. Crenshaw; Special License Commissioner, Thomas J. Martin; Adjutant-General, William T. Damron; Factory Inspector, Clement J. Nord- meyer; Judges of the Supreme Court—Waltour M. Robinson, Chief Justice; Theodore Braw- Gavon D. Burgess, William Champa Marshall, Leroy B. Valliant, James D. Fox, James D. Gantt. The only Republican State officer is Waltour M. Robinson, Chief Justice of the Supreme Court.

State elections are held in November, every num- bered years, and all State officers hold for a term of four years. The Legislature holds biennial sessions, beginning in January of odd- numbered years. The Senate was composed of 25 Democrats and 8 Republicans. The House was composed of 82 Democrats and 60 Republicans. James H. Whitecotton was Speaker.
United States of America (Missoull) 756

Finance.—The bonded debt of the State on Jan. 1, 1902, was $1,297,000, showing a reduction in one year of $297,000. The tea and coffee bonds have $439,839 in certificates of indebtedness outstanding, in which the State school and seminary funds are invested, making the total debt amount to $3,690,839. The State's bonds draw 3% per cent. interest, are dated Jan. 1, 1886, and are redeemable after Jan. 1, 1903. The certificates of indebtedness draw 5% and 6% per cent. interest. The bonded debt of the counties and towns is $31,065,192. County and township bonds to the amount of $6,000,000 are outstanding. They are owed by 53 counties, where the indebtedness is

Railroads.—There are 154 steam-railways in the State, operated by 54 companies. Their total mileage is 6,566,36 miles, of which 7,300 is main line. There were 7,297 miles within the past year. Five counties in the State have no railroads. The railways pay a total tax of $928,752. The casualties last year were as follows: persons killed, 228; injured, 1,403. Of those killed, 60 were employees and 4 were passengers. Of the injured, 700 were employees and 160 passengers. All the railroads are of standard gauge except the Missouri Southern and the Southern.

Insurance.—There are doing business in the State 131 mutual fire companies, 10 Missouri town mutual fire, lighting, and tornado companies, 26 foreign fire companies, 47 miscellaneous stock companies, 49 regular life companies, 4 stimulated premium life companies, 3 assessment life companies and associations, and 72 fraternal benefit associations. The business done in the State in 1901 was as follows: Fire—risks written, $252,077,208.42; premiums thereon, $5,900,940.39; losses paid, $4,216,734.43; losses incurred, $4,490,323.86. Marine and inland—risks written, $10,317,474; premiums thereon, $86,751.82; losses paid, $45,797.92; losses incurred, $43,445.56. Tornado—risks written, $282,435,469.44; premiums thereon, $154,110.55; losses paid, $307,037; losses incurred, $3,183.92. Fidelity is written by the number of premiums written, $56,959,115.33; premiums thereon, $212,078.34; losses paid, $59,494.57; losses incurred, $44,505.39. Miscellaneous—risks written, $227,383,080.45; premiums thereon, $1,397,327.45; losses paid, $356,954.96; losses incurred, $384,373.61. Grand total other than life—risks written, $845,329,672.57; premiums thereon, $7,561,234.80; losses paid, $4,918,530.14; losses incurred, $52,918,348.93. The life business done in the State in 1901 was as follows: Policies in force Dec. 31, 1901, number 105,756; amount, $2,070,784,504.69; claims paid in 1901, $3,205,503.21; premiums collected in 1901, $295,842,241.76. The industrial insurance business during 1901 was as follows: The policies in force Dec. 31, 1901, numbered 441,888; amount, $60,189,184; claims paid in 1901, $629,979,367; premiums collected in 1901, $617,947,81.

Education.—The State school fund amounts to $3,159,073.40, and the State seminary fund to $1,235,839.42, all of which is invested in the State certificates of indebtedness, and draws interest at 5 and 6 per cent. The interest is annually distributed among the 9,948 school districts, in proportion to the number of children of school age that they contain. The State school system consists of the State University. Agricultural College, School of Mines, 3 normal schools, 1 industrial institute, 291 primary schools, 256 high schools, and 10,299 public schools.

The State University has an endowment of $1,235,000, and 47,108 acres of unold land. It receives annually from the state a sum of $38,150. Its total annual income is $210,000. The number of students enrolled in June, 1902, was 1,710. The School of Mines and Metallurgy is at Rolla.

The Normal School, at Kirksville, had an enrolment as follows at the time of the last report: Men, 354; women, 501; total, 855. The total enrolment at the Normal School, at Warrensburg, was 1,012. The total enrolment at the Cape Girardeau Normal School was 442; and at Lincoln College for colored teachers, at Jefferson City, 247, of whom 125 were men and 92 women.

The following statistics of schools have been condensed from reports of county commissioners: Enrolment, white,—male, 341,593; female, 337,616; total, 679,209; color—male, 15,677; female, 16,994; total, 32,671; grand total, enrolled, 711,720. Number of teachers employed,—white, 5,807; female, 9,759; total, 15,566; colored,—male, 285; female, 589; total, 774; grand total teachers employed, 16,160. Average salaries of teachers per annum,—men, $290; women, $308. Estimated value of school property, $26,702,576. There are 126 primary schools in the State, employing 1,275 teachers, and having an enrolment of 19,717 pupils, and buildings and grounds worth $7,853,604. They have a total permanent endowment of $6,829,000.

State Institutions.—The State institutions are the Penitentiary, at Jefferson City; the Reformatory for Boys, at Boonville; the Girls' Industrial Home, at Chillicothe; 4 insane asylums,—at Fulton, St. Joseph, Nevada, and Farmington,—a colony for the feeble-minded, at Marshall; a Confederate Soldiers' Home, at Higginsville, which costs $40,000 a year; and a Federal Soldiers' Home, at St. James, which costs $20,000 a year. About $900,000 was spent in the last two years on the buildings of public institutions.

Agriculture.—Seventy-seven per cent. of the land area of Missouri is included in its farms, of which 67.4 per cent. is improved. The number of farms, according to the last census, was 284,886. The value of farm property in 1900 was $1,033,121,897, of which $843,604,213 is lands, improvements, and buildings, $25,602,000 implements and machinery, and $160,540,004 live stock. The value of farm products was $218,296,000. The total increase in the value of farm property since 1850 was found to be 31.4. The number of farms operated by owners was 197,989; by cash tenants, 31,230; and by share tenants, 55,867. Of the farmers of the State, 96.3 are white and 1.7 colored. Of the white farmers, 68.1 per cent. own all or a part of the farms they operate; of the colored farmers, 30.9 per cent. Of the value of crops, cereals contributed 65.5 per cent.; hay and forage, 16.8 per cent.; vegetables, 7.2 per cent.; fruits and nuts, 3.6 per cent.; forest products, 3.7 per cent.; all other products, 3.2 per cent.

Labor.—There are 410 labor organizations in the State, with a total membership of 52,426, of which 51,426 are men and 1,000 women. The total number of strikes in the State in 1901 was 177, of which, according to the Labor Commissioner's report, 119 were settled satisfactorily to the strikers, 33 were compromised, and 15 were lost.

Manufactures.—The Bureau of Labor receives reports from 1,066 manufacturing concerns. The aggregate value of the products in 1900 was $523,711,595, an increase over 1900 of $77,083,903. The average number of males em-
ployed was 80,610; females, 101,453; an increase of 27,890 over the previous year. The amount of money paid out in wages was $46,869,729, an increase over the preceding year of $83,748,198.

Military.—The National Guard of Missouri consists of 1 brigade, comprising 4 regiments of infantry and 1 battery. The numerical strength is as follows: Commissioned officers, 198; non-commissioned officers, 337; musicians, 158, including 4 regimental bands and trumpet corps; hospital and ambulance corps, 64; farriers and blacksmiths, 7; privates, 1,918; total, 2,682.

Political.—The State election took place Nov. 5. Tickets were nominated by the Democratic and Republican parties, and the following parties nominated tickets by petition: Independent, Allied, Prohibition, Socialist, and Socialist-Labor.

The Democratic State Convention met in St. Joseph, July 22, and nominated the following: For Superintendent of Public Schools, William T. Carrington; Railroad and Warehouse Commissioner (long term), John A. Knott; Railroad and Warehouse Commissioner (short term), Joe P. Rice.

The opening sentence of the platform "indorsed and affirmed the Democratic national platform adopted at Kansas City in 1900." Concluding, the platform said:

"We condemn the dishonest paltering with the trust evil by the present Republican administration, and demand the consummation of the trusts to our 'strenuous' President, who, only a few days before Mr. McKinley's assassination, boldly proclaimed in public speech at Minneapolis that the trusts are an evil which the public safety requires should be promptly and mercilessly destroyed, but who, since his accession to the presidency, has struck not one effective blow against them, although holding in his hands all the necessary powers of government, and who, instead of executing his threat to exterminate the trusts, talks now only of regulating them.

"We favor the most stringent national and State legislation for the absolute control and regulation of the trusts, to the end that they will cease to be a menace to our public welfare as well as persecutors of the great army of the laboring people of our land. To that end we favor a consistent tariff revision which will remove the duty or tariff from all trust-made or trust-controlled goods for their purely monopolistic trusts into competition with foreign nations, depriving them of the fraternal support and fostering care of the Republican administration, by which they are now enabled to reduce their labor, minimize their output, grind down the working classes, and arbitrarily fix their own prices in this country, to the great detriment and hardship of our people, while at the same time the people of foreign countries reap all the benefits of the trust's economy by being able to purchase all of our trust products in their own country at fixed reductions varying from 20 to 60 per cent.

"In the event of such legislation failing in its purpose, then we favor the most drastic legislation which can be enacted prohibiting the exist- ence or forming of such trusts, or any other such combinations which will have even a tendency to destroy honest competition in any line of business or make it possible to arbitrarily regulate wages, prices, rates, or charges of any kind.

"We condemn the alarming waste of the people's money in extravagant appropriations by Rep- ublicans, amounting to more than $1,000,000,000 per year, and we heartily ap- prove of the course of our Democratic representa-
UNITED STATES OF AMERICA. (MONTANA) 757

The Republican Judicial Convention met in Joplin, July 15, and nominated the following: For Judge of the Supreme Court, Division No. 1, Edward Higbee; Judges of the Supreme Court, Division No. 2, Henry Lamm and Moses Whybark.

The candidates of the Independent party were: For Judge of the Supreme Court, Division No. 1, Edward Higbee; Judges of the Supreme Court, Division No. 2, Henry Lamm and Moses Whybark; Superintendent of Public Schools, James U. White; Railroad and Warehouse Commissioner (long term), W. S. Crane; Railroad and Warehouse Commissioner (short term), Barney W. Frauenthal.

The candidates of the Allied party were: For Judge of the Supreme Court, Division No. 1, Frank E. Richey; Judges of the Supreme Court, Division No. 2, Henry N. Ees and Zachary Taylor; Railroad and Warehouse Commissioner (long term), Lyman Forgraves; Railroad and Warehouse Commissioner (short term), Oswald Hicks.

The candidates of the Prohibition party were: For Judge of the Supreme Court, Division No. 1, Reuben B. Robinson; Judges of the Supreme Court, Division No. 2, Jonathan Orr and Austin F. Butts; Superintendent of Public Schools, David R. Dungan; Railroad and Warehouse Commissioner (long term), Andrew Grasley; Railroad and Warehouse Commissioner (short term), William N. Keener.

The candidates of the Socialist party were: For Judge of the Supreme Court, Division No. 1, George F. Rudnick; Judges of the Supreme Court, Division No. 2, James A. Slanker and Frank P. O'Hare; Superintendent of Public Schools, A. H. Hull; Railroad and Warehouse Commissioner (long term), Pearl Thompson; Railroad and Warehouse Commissioner (short term), W. L. Phifer.

The candidates of the Socialist-Labor party were: For Judge of the Supreme Court, Division No. 1, Charles Weppermann; Judges of the Supreme Court, Division No. 2, O. M. Howard and George F. Rudnick; Superintendent of Public Schools, Edward Beuing; Railroad and Warehouse Commissioner (long term), Amiel Neidermeyer; Railroad and Warehouse Commissioner (short term), Henry F. Mueller.

To the Democratic ticket were elected. The vote on the candidates for Supreme Judge who headed the tickets was as follows: Valliant, Democrat, 273,091; Higbee, Republican, 228,687; Wippermann Socialist-Labor, 989; Gibbens, Socialist, 6,535; Richey, Allied, 1,841; Robinson, Prohibitionist, 4,945; scattering, 1.

MONTANA, a Western State, admitted to the Union Nov. 8, 1889; area, 146,080 square miles. The population, according to each decennial census since admission, was 132,519 in 1890 and 242,329 in 1900. Capital, Helena.

Government.—The following were the State officers in 1902: Governor, Joseph K. Toole; Lieutenant-Governor, Frank Higgins; Secretary of State, George M. Hays; Auditor, J. H. Calder; Treasurer, A. H. Barrett; Attorney-General, James Donovan; Superintendent of Education, W. W. Welch. These were elected on a fusion ticket of Democrats and Populists. Other officials were: Commissioner of Agriculture, Judson A. Ferguson; Adjutant-General, R. L. McCulloch; Land Register, Thomas D. Long; State Examiner, William Hudnall; Coal-Mine Inspector, Howard F. (Jug) Buchanan; Coal-Mine Commissioner, F. D. O'Neil; Mine Inspector, John Byrne; Inspector of Horticulture, E. N. Brandagee; Chief Justice of the Supreme Court, Theodore Brantley, Republican; Associate Justices, G. R. Milhollin, Republican; P. B. J. McBoyan, Democrat; Clerk, Henry G. Rickerts, Democrat.

The State officers are elected for terms of four years at the time of the presidential elections. The Legislature meets biennially in January of the odd-numbered years.

Finances.—The unexpended balance Dec. 31, 1902, was $616,986.45. The balance of warrants outstanding in the Capitol building funds was $48,049.71; and in the Reformation School building fund, $1,212.20. The warrants drawn on the stock-bounty fund amounted to $110,898.13, which was balanced by the cash on hand.

The bonded debt of the State is $860,000. The debts of the 28 counties aggregate $2,553,979.

Valuations.—The total valuation of the State for taxation, including railroads, is $185,625,657 for 1902, of which $66,001,619 is real, exclusive of railroads, and $66,706,742 personal property. In 1901 the total was $186,787,983. There is a gain of more than $6,000,000 in real, and a loss of nearly $5,000,000 in personal property.

Education.—By the census report there were 11,675 illiterates in the State in 1900. In the percentage of persons four years or older able to read and write Montana stood twenty-seventh in the list, with 98.07 per cent. The total number of children of school age Aug. 31 was 64,623, of whom 32,813 were boys and 31,810 girls.

This year 1,291 teachers were employed—236 men and 1,055 women.

The average length of term in the State was 6.66 months. There are reported 4 private schools, which have 1,839 pupils.

The whole number enrolled during the year was 44,881, while the average daily attendance was 21,471.

Sixty-five districts erected new schoolhouses. The number of districts adopting free text-books was 22, while in 28 districts the proposition was defeated by vote of the people. There are 48,510 volumes in the district libraries. The average salary for male teachers is $76.89, and for female teachers $52.04.

The State Normal School had an attendance of 118 in December. The School of Mines had 62. A night-class organized for young men employed during the day had 32. The expenses of the school amount to about $24,516.

The enrolment at the Agricultural College, at Bozeman, was about 250 in the fall term. The estimated expense for 1902—03 was $35,420, of which the Government contributes $20,000.

The science hall of the State University, at Missoula, was damaged by fire, March 13, to the extent of $5,568.

Banks.—There are 21 State banks, with total resources $15,254,236. The loans and discounts amount to $7,924,946, besides those on real estate, $797,030. The deposits amount to $11,980.693.

The State Savings—Bank of Butte has resources $4,133,889.

The defaulting teller of the First National Bank of Great Falls pleaded guilty in May, and was sentenced to ten years in the Penitentiary.

Telephones.—There has been a marked increase in the telephone business of Helena, which now has more than 500 telephones. Butte has 1,500 instruments. Great Falls has 325 telephones, Missoula 275, Anaconda 200, and Bozeman 110.

Charities and Corrections.—A new building has been provided for the Asylum for the Deaf, at Boulder. About 12 blind children are taught there.
The insane are provided for by contract at the rate of 65 cents a day, and the State convicts at 45 cents. The number of patients in the insane asylum averages 500, of whom about one-fifth are women.

Deer Lodge Prison had in April 465 convicts, about 130 more than in the previous year. About 20 were women.

The number of inmates at the Reform School, at Miles City, was 94, of whom 82 were boys and 12 girls. The report details the expenditures of $21,998.47 for 1901 and $22,223.11 for 1902.

Military.—There are 34,000 men liable to military service. The infantry regiments of the National Guard consist of 2,615 men. The State appropriation is $10,000.

Railroads.—The State is credited with 127 miles of new track in 1901, and 53 during the first month of 1902. The valuation of the roads for taxation is somewhat more than $30,000,000.

The Capitol.—The new Capitol was finished in June and dedicated in November by previous appointment. July 4. The contract price of the building was $298,993; the actual cost to the contractor is given as about $240,500.

Industries and Products.—The value of the principal mineral products of the State in 1901 was estimated as follows: Gold, $4,802,717; silver, $18,354,443; copper, $36,751,837; lead, $498,625; total, $83,297,019.

The silver is said to be at coinage value by the Government rate of $1.29 an ounce; figured on the average market price, the value would be less than half that given in this estimate. The preliminary estimate of the Director of the Mint for the production in 1902 gives Montana's gold product as in value $4,134,365, and silver, $6,900,000.

The report of the United States Geological Survey for 1901 shows that Montana produced in that year $90,000,000 worth of sapphires. Nearly all these stones were mined in the Yogo fields, in Fergus County. The value of the sapphires mined in Montana exceeded that of any other precious stones mined except turquoise, whose value amounted to $118,000.

Rubies are found in the State, but none have the deep color of the Oriental stone.

New deposits of corundum have been found in Gallatin County.

According to statistics gathered by Commissioner Ferguson, there was a falling off in the production of coal in Montana in 1901 as compared with 1900. The total production was 1,442,569 tons.

There are, according to the latest estimate of the survey, 32,000 square miles of coal-bearing formations in Montana.

There were 35 accidents in the coal-mines in 1902, of which 7 were fatal. The whole number of fatal accidents in mines was 35.

The total value of the stone quarried, including plaster of Paris and other by-products, was $470,142, compared with $392,194 the previous year.

There are 20 breweries in the State, employing about 250 men, with a capital estimated at $1,271,000. The amount of beer manufactured was greater than in any other year, the number of barrels being 163,283.

A table of industrial statistics for 1900 gives the value of the manufactured products of Montana at $48,900,000.

The report of the State Board of Stock Commissioners shows that in 1902 the State produced 151,986 beef cattle, of which 92,000 head were shipped to points out of the State. Exceeding all other States in wool-grow-

ing, the clip having been about 33,000,000 pounds this year.

The farms of Montana, June 1, 1900, numbered 13,370, and had a value of $629,026,00. Of this amount, $9,365,530, or 15.1 per cent., represents the value of buildings, and $52,600,580, or 84.9 per cent., the value of land and improvements other than buildings.

Lands.—The wooded area in the State is about 42,000 square miles. The records of the State Land Office show a remarkable increase in the sale and lease of State lands. The State's holdings now amount to 2,020,977.73 acres. Of this amount, 304,914.24 acres are timber land, showing an estimate of 882,590,000 feet of law timber; 65,683.03 acres are classified as agricultural, and the remainder of 2,650,470 are classified as grazing lands.

From the leased land the State received the annual sum of $196,553.52. The school lands under lease exceed 1,350,000 acres.

Reserves.—By proclamation, Aug. 16, the President created a reserve on the coal-mines of the Little Belt in Montana, to be known as the Little Belt mountain and the Madison forest reserves. A large amount of land is withdrawn from public entry, and the Government will undertake to protect many millions of feet of timber on the land from the ravages of fire. The Little Belt mountain reserve includes timber land in the range of mountains bearing the same name, situated in a portion of Meagher, Fergus, and Cascade Counties, and is quite close to Helena. The Madison reserve lies almost wholly in the county of that name, excepting a very small portion which laps over into Gallatin County. The Lewis and Clarke reserve contains 4,757 square miles.

Legal Decisions.—By a decision of the United States Supreme Court, the anti-trust laws of many States are pronounced unconstitutional. The ruling applies to all that make exceptions in favor of any class or classes.

The law of the Legislature of 1901 extending the operation of the statute of limitations upon accounts from three to five years has been declared invalid because it never passed the Senate, though it was signed by the President of the Senate and by the Governor.

The antigambling law was attacked, but was upheld by decision of the Supreme Court. One of the test cases was in regard to a slot-machine.

Political.—An election was held in May for an Associate Justice of the Supreme Court, a member of Congress, State Representatives, and local officers.

The Socialists were first in the field with a State ticket. Their convention was held at Bozeman, in July. W. F. Cameron was named for Associate Justice and George B. Sprout for Congress.

The resolutions called for an eight-hour amendment to the Constitution, and one prohibiting blacklisting, an employers' liability law, the initiative and referendum, and woman suffrage: expressed sympathy for the miners of Pennsylvania; and said regarding fusion: "That the Socialists must never recognize, unite, or affiliate or fuse in any way with any other political party. That any candidate on our ticket must refuse the endorsement of any other political party because it insinuates our acceptance of their platform. We call upon the State membership to expel at once any member who proposes compromise or fusion."

There was dissension in the Democratic party this year, Senator Clark and F. Augustus Heine being at the head of the two factions. The Clark faction gained control of the State convention.
which met at Bozeman, Sept. 24. Jere B. Leslie was nominated for Associate Justice, and John M. Evans for member of Congress. The Heinz faction then organized the State, making nominations and charges against each other the other party of bribery and corruption.

Early in the year the factional troubles in the Republican party broke out in a meeting of "straight Republicans" in Helena, Jan. 6, when a preamble and resolution were passed protesting against the domination of the "machine" controlled by ex-Senator Carter. The resolution was sent to the President.

Apparently the quarrel was settled or compromised before the State convention, which met in Great Falls, Sept. 27, and nominated W. L. Holloway for Associate Justice and Joseph M. Dixon for member of Congress.

In October the Populist and Labor parties in a joint convention nominated Judge Holloway.

The Republican candidates were elected. The vote for Justice stood: Holloway, Republican, 31,600; Leslie, Democrat, 21,204; Cameron, Socialist, 2,400; Fox, Independent, 2,600.

The State Senate will have 12 Democratic, 13 Republican, and 1 Labor member; the House, 9 Democratic, 45 Republican, 9 Labor, and 5 Democratic.

NEBRASKA, a Western State, admitted to the Union March 1, 1867, area, 77,531 square miles. The population, according to each decennial census since admission, was 122,993 in 1870; 452,405 in 1880; 1,085,910 in 1890; and 1,068,539 in 1900. Capital, Lincoln.

Government.—The following were the State officers in 1902: Governor, Ezra P. Savage; Lieutenant-Governor, C. F. Steele; Secretary of State, George W. Marsh; Treasurer, William Stuefer; Attorney-General, F. N. Prout; Auditor, Charles Weston; Adjutant-General, J. N. Kilian, succeed ed by William Hayward, who in turn was succeeded by L. W. Colby; Superintendent of Public Instruction, W. K. Fowler; Commissioner of Public Lands, G. D. Follmer—all Republicans; Chief Justice of the Supreme Court, J. J. Sullivan, Democrat; Associate Justices, W. J. Sedgwick, Republican, and S. A. Holcomb, Fusion; Clerk, Lee Herdman.

The State officers are elected in even-numbered years, the term beginning in January of odd-numbered years. The Legislature holds biennial sessions, beginning in January of odd-numbered years.

Finances.—The report of the Treasurer for the biennium beginning Dec. 1, 1900, and ending Nov. 29, 1902, presents the following remarks and suggestions: A balance of $3,074,10 in the Normal School fund and $4,986 in the Penitentiary fund is not available on account of the failure of the Legislature to make the necessary appropriation. The amount of $64,74 derived through the operation of the inheritance-tax law is unavailable because the law does not designate the fund to which it is to be credited.

The investment of the educational trust funds of the State in interest-bearing securities, the Treasurer recommends, should receive the earnest attention of the Legislature until a wise and practical solution is obtained. Under present constitutional limitations, municipal bonds and school district bonds are not available for investment. The recent decision of the Supreme Court holding that bonds of other States are available securities has temporarily relieved the situation, and particularly all the educational trust funds are now invested. In the biennium just closed the total investments amounted to $2,839,825.43. But it has been impossible to keep all the trust funds invested at all times. The Treasurer suggests a constitutional amendment authorizing investment in municipal and school district bonds coupled with a provision for the deposit of any uninvested balance in depository banks. The trust funds hold as investments bonds and warrants to the amount of $6,456,977.90.

The floating indebtedness of the State is $1,989,259.83, consisting of warrants drawn on the general fund. The educational trust funds hold $1,457,361.50 of this amount. This floating debt has been created by making appropriations larger than the amount that could be collected from the State levy upon the assessed valuation of property.

The general financial statement for the biennium ending Nov. 29, 1902, is as follows: Balance Dec. 1, 1900, $615,018.34; receipts from Dec. 1, 1900, to Nov. 29, 1902, $6,742,551.71; total, $7,357,570.05; disbursements from Dec. 1, 1900, to Nov. 29, 1902, $6,925,314.67; on hand Nov. 29, 1902, $432,253.38.

The receipts and disbursements of the treasury from Dec. 1, 1900, to Nov. 29, 1902, inclusive, were as follows: General fund, receipts, $2,159,532.36; payments, $2,100,250.92; Sinking-fund receipts, $11,017.58; payments, $67,782.81. Permanent school fund receipts, $2,463,595.69; payments, $2,504,792.07. Temporary school fund, receipts, $1,340,975.09; payments, $1,334,006.45. Permanent university fund receipts, $65,573.15; payments, $65,500.97. Agricultural College endowment fund, receipts, $138,882.62; payments, $160,482.93. Temporary university fund receipts, $422,541.25; payments, $383,522.69. Hospital for Insane fund, receipts, $1,406.92; payments, $291.07. State Library fund receipts, $7,513.50; payments, $8,148.21. University cash fund receipts, $53,491.34; payments, $55,272.97. Normal Library fund receipts, $3,105.17; payments, $3,990.51. Normal endowment fund receipts, $157,762.77; payments, $44,000. Normal interest fund receipts, $5,665.35; payments, $4,604.17. Penitentiary special labor fund receipts, $46,141.38; payments, $43,765.11. Penitentiary land fund receipts, $1,730. Agricultural and Mechanic Arts fund receipts, $30,000; payments, $31,841.17. United States experiment station fund receipts, $30,000; payments, $30,423.07. Inheritance tax fund receipts, $64.74. Total receipts, $6,810,334.52; total disbursements, $6,903,067.48.

Education.—State Superintendent W. K. Fowler issued a new educational directory, giving statistics for the year ending July 8, 1901. There are 6,675 districts in the 90 counties, and 6,773
schoolhouses. The whole number of teachers employed is 9,485, at an average monthly salary of $40.08. Of the 37,000 children of school age (five to twenty years), 20,183 are enrolled. It costs the State an average of $13.30 a year to educate each enrolled pupil, but this amount is increased to $21.62 on the basis of average attendance. The value of district property is estimated at $98,700,683.79.

In apportioning the temporary school fund among the counties in December, 1902, the Superintendent had at his disposal $236,322.88, the smallest amount available for several years. The whole number of persons of school age in the State being 74,304, the rate per pupil was 63 cents. In the May apportionment the rate was $1.11, and in the previous December 84 cents. The smallness of the fund is explained by Treasurer Steuerer by the fact that during his term $860,000 has been paid in by holders of educational lands, necessitating the reinvestment of this money in bonds and warrants bearing only 3 per cent. interest, just half the rate on the land contracts, and little or no return is to be expected on many of the securities for some time.

Difficulty was experienced at the opening of the school term in September, in securing teachers, the salaries not being large enough to attract either men or women, who could secure more profitable employment in harvesting the unusually plentiful crop.

The Superintendents of schools, in all the counties, exposed the national education system for the third time. It was charged that the State was not fulfilling its obligations, that the public school system was not providing the necessary educational facilities for the children of the State. The complaint was made that the teachers were not adequately paid, that the schools were not properly equipped, that the attendance was too small, and that the States and counties were not willing to give the necessary support to the schools. It was also charged that the State was not doing its share in the support of the schools, that the counties were not giving the necessary support, and that the schools were not properly managed.

The Superintendent of the University of Nebraska decided to adopt the Omaha Medical College as an affiliated school. Students will pursue two years of their medical course at Lincoln, and the remaining two at Omaha, where they will have the benefit of the clinical work to be found in a city. But, 1,500 acres of school lands remained unleased in April, 1902.

Products and Resources.—Census Bulletin No. 193, published in July, 1902, gives the agricultural statistics for the past ten years. The farms at Nebraska, June 1, 1900, numbered 121,525, and were valued at $577,690,620. Of this amount 60.8 per cent. represents the value of buildings and 24.2 per cent. the value of land and improvements other than buildings. The total value of farm property was $747,950,067.

In 1902, the number of dairy cows in the State was 51,224; of other neat cattle, 2,623,099; horses, 790,318; mules and asses, 53,856; sheep, 335,930; swine, 4,128,000.

In 1890, 3,014 manufacturing establishments were enumerated, with a capital of about $37,500,000, producing $33,000,000 worth of goods at a cost of $35,333,333, with a net profit of $7,115,778. In 1900, 5,414 establishments, with a capital of about $72,000,000, at a cost of $125,000,000, produced $144,000,000, yielding a net profit of about $21,000,000.

Deputy Food Commissioner Basset issued his biennial report in December. He estimated an increase of 33% per cent. in the production of butter, over that of 1901. In this report the commissioner asked that the Legislature give him control of all the foodstuffs, in order more effectively to enforce the law against food adulterations. The Commission reported having issued 436 permits since its organization, and received $4,296 in fees.

The University Agricultural Experiment Station published a report made up from 500 replies of alfalfa-raisers regarding the number of processes employed, and also the care of the crop. Bottom-land produced somewhat larger crops than upland, but sustained greater loss from winter killing. A clay subsoil was found to be no impediment in a large number of cases. Early sowing—no use of a nurse crop, sowing broadcast with subsequent harrowing, and the use of 20 pounds of seed to the acre—are the principal approved conditions. Disking—that is, going over the ground with a disk harrow before growth begins, or in summer immediately after cutting—is beneficial, as this process cuts the crown root and stirs the soil.

Cattle suffered severely from what is called the corn-stalk disease which was pronounced by prominent veterinarian not to be a disease, but a dietetic error, in that corn-stalks when not properly cared for lose their nutrient qualities.

Coal was discovered in the Black Hills, and iron ore is found in the neighborhood of Jamestown; and subsequent borings led to the belief that the vein underlies a large part of the country around Jamestown and may be mined with advantage.

Legal Decisions.—The constitutional amendment relating to the vote to amend the Constitution was proposed in due form by the Legislature during the incumbency of Governor Morrill, but it was not acted upon by the voters. The amendment was received by Secretary of State Marsh under the advice of Attorney-General F. N. Prout, who declared that since the power of initiative rested with the Legislature, the Governor had no power over the proposed amendment, either to approve or to veto. His view was supported by citations from the Constitution and from decisions of the Supreme Court.

On Oct. 9 the judgment of the Supreme Court, written by Commissioner John R. Ames and concurred in by Judge Holcomb and Judge F. B. Swick, restrained the School Board of District 21 of Gage County from permitting a teacher to continue the practice of reading the Bible, singing certain songs, and offering prayers on the ground that the exercises were sectarian and forbidden by the Constitution. Attorney E. O. Kreisinger, representing the School Board, filed a motion for a rehearing, and received permission to submit his brief in support of it by Dec. 20. The decision of the court attracted attention throughout the United States.

One of the hardest fought legal battles began June 8, when the Supreme Court was taking testimony on the application of the Bee Building Company of Omaha for a writ of mandamus to compel the State Board of Equalization to approve railroad franchises. The application was denied on the ground that the franchises were for separate and apart from tangible property, and thereby increase the value of the roads above the amount fixed at the spring meeting of the board. The defense of the board was that it had assessed franchises: the attorneys for the railroad concurrently maintaining that, as the courts had failed to define a franchise, the action of the board was arbitrary. The consideration earnings and the fact that the lines were in active operation constituted the taxing of franchises. The court denied the application.

The Real-Estate Exchange of Omaha attempted
to enter a protest upon the City Council, during its sitting in January as a board of equalization, consented to disallow a disproportion between the assessments of real estate and the property of such corporations as the street-railway, electric-light, telephone, gas, and water companies. The Council refused to entertain their protest, and an injunction was served by the Supreme Court restraining the Council from passing the tax-levy ordinance until a hearing had been secured in the cases of the 5 corporations above mentioned. The litigation lasted three months. The injunction was dissolved on May 18, after the hearings had been completed, and resulted in an increase of $1,023,190 in the assessments of the 5 public-service corporations. The ruling was that the bonded indebtedness of the corporations, instead of being subtracted from the taxable property, be added to it.

Penitentiary.—The $75,000 appropriated by the Legislature to rebuild the Penitentiary, which had suffered by a fire, proved insufficient to complete the new structure, and work was suspended.

Political.—In the State election, Nov. 4, the Republican ticket was successful by a large majority. The following were the officials chosen: Governor, John H. Molitor-Governor; E. G. McGilton; Secretary of State, George W. Marsh; Treasurer, Peter Mortensen; Auditor, Charles Weston; Attorney-General, Frank N. Front; Commissions of Probate, Justice, and Buildings, George D. Foller; Superintendent of Public Instruction, William K. Fowler. The 5 Representatives elected to Congress were all Republicans.

The platform adopted at the party convention in June expressed its sympathy with the President's policy in favor of the national irrigation laws; favored a speedy revision of the State Constitution to meet the changed conditions of the new century; called for the enactment of additional laws to hold every custodian of public funds responsible for the repayment of principal and accruing interest; called attention to the necessity of increasing the State's revenues and reducing the State's debt, which had exceeded the State's income for the first time in its history ($400,000), requiring a more strict enforcement of the laws relating to assessment and taxation, also requiring a revenue from all non-resident corporations writing life and accident insurance in the State; favored the creation of a board of pardons to investigate and pass upon applications for executive clemency; favored the creation of a board of audit, who should examine the accounts of the State Treasurer and periodically make public reports.

In the April town elections the main contest was over the liquor question, and high license won in a majority of cases.

An amendment to the State Constitution, proposed by George W. Marsh, Secretary of State, was voted on at the November election. The proposition was to make it easier to amend the Constitution by requiring that when amendments have been agreed to by three-fifths of the members elected to each house and published at least once each week in at least one newspaper in each county for a period of thirty days before an election of Senators and Representatives (the procedure for the introduction of an amendment to the Constitution), the amendment shall become a part of the Constitution if its adoption is approved by a majority of voters voting at such election on the proposed amendment (the term, “the vote of “a majority of the electors voting at such election”). The amendment was defeated by the provision which it sought to correct. Out of the 185,574 votes cast at the election, 49,147 were cast in favor of the amendment, 136,427 against it, the total for and against not being a majority of the whole.

NEVADA, a Western State, admitted to the Union Oct. 31, 1864; area, 116,700 square miles. The population, according to each decennial census since admission, was 42,491 in 1870; 82,596 in 1880; 45,761 in 1890; and 42,335 in 1900. Capital, Carson City.

Government.—The following were the State officers in 1902: Governor, Reinhold Sadler; Lieutenant-Governor, James R. Judge; Secretary of State, Eugene Howell; Treasurer, David M. Ryan; Comptroller, Samuel P. Davis; Attorney-General, William Woodburn; Surveyor-General, Edward D. Kelley; Superintendent of Public Instruction, Orris King; Adjutant-General, James R. Judge, ex officio; Chief Justice of the Supreme Court, Thomas V. Julien; Associate Justices, Charles H. Beiknap, Albert L. Fitzgerald; Clerk, Eugene Howell, ex officio. All are of the Southern Democratic party except Superintendent King, who is a Republican. William A. Massey resigned as Chief Justice of the Supreme Court, and Gov. Sadler appointed Thomas V. Julien to fill the unexpired term.

State officers are elected in November, once in four years. An Associate Justice of the Supreme Court is elected in the State every second year. The Legislature meets every second year on the second Monday in January.

Finances.—The treasury, Dec. 31, 1902, had $299,810.50 in coin. The State funds securities were: Irredeemable State school funds, Nevada 4 per-cent, $240,100; Nevada 5 per-cent, $380,000; United States 4 per-cent, $900,000; total, $1,520,100. In 1902 the Bond Commissioners redeemed $13,000 worth of bonds and issued $15,500. The Nevada war claims against the Government amounts to $402,000. The annual report of the Treasurer shows that the State is better in a financial way than it has ever been.

Lands.—The grants to the State were 2,732,884.70 acres, of which 30,282.36 acres are still due to the State. There are 450,000 acres of reverted lands, the greater part of which are for sale at $1.25 an acre. The State has issued patents for 60,000 acres, and still holds an estimated 61,250,000 acres in the State are owned by the General Government.

Education.—The school population between the age of six and eighteen years is 9,377. The semiannual apportionment was $70,414.27.

Products.—The number of cattle in the State is estimated at 50,000, and the sheep from 5,000,000 to 7,000,000.

Political.—The Democratic State Convention met in Reno on Aug. 26, 1902. The Silver Party Convention also met on the same day. After a three days' meeting the two parties agreed to a fusion, and the following ticket was nominated: For Congressman, Clarence Van Duzer; Governor, John Sparks; Lieutenant-Governor, Lemuel Allen; Supreme Judge, George F. Talbot; Attorney-General, James G. Sweeney; Secretary of State, Eugene Howell; Treasurer, David M. Ryan; State Comptroller, Samuel P. Davis; Surveyor-General, Edward D. Kelley; Superintendent of Public Instruction, John Edwards Bray; Superintendent of State Printing, Andrew Maute; Regents of the State University, William W. Booher (short term), Richard Kirtion (the term, “the vote of “a majority of the electors voting at such election”). The amendment was defeated by their platform pledged to them the free and unlimited coinage of silver; opposed trusts and
monopolies of any kind; favored an eight-hour law for workmen; voted the election of United States Senators by the direct vote of the people; favored the irrigation law in every form; opposed the leasing of public lands to individuals or corporations; and pledged their votes to Francis G. Newlands for United States Senator.

The Republican Convention met in Reno on Sept. 12, 1892, and nominated the following ticket: For United States Senator, Thomas P. Havley; Congressmen, Edward B. Farrington; Governor, Abner C. Cleveland; Lieutenant-Governor, Frank J. Button; Justice of Supreme Court, P. J. Bowler, Jr.; Secretary of State, William G. Douglass; Comptroller, Milo C. McMillian; Treasurer, Simon Bray; Attorney-General, Samuel Platt; Surveyor-General, Walter C. Gayhart; Superintendent of Public Instruction, Orvis Ring; Superintendent of State Printing, William W. Booth; Regents of State University, Herman H. Springmeyer (short term), Edward E. Dodge (long term).

Their platform approved the administration of President Roosevelt; favored the largest use of silver as money metal in all matters compatible with the best interests of our Government; approved the efforts of the present administration to enforce to the fullest extent possible the Sherman antitrust law; favored labor-unions in all their lawful acts and procedures as being powerful instrumentalities for the public good, and declared themselves in favor of an eight-hour working day; favored territorial expansion; opposed any constitutional amendment authorizing a lottery; opposed the pollution of rivers and reservoirs; favored the election of United States Senators by direct vote of the people.

At the election, Nov. 4, 1902, the following ticket was elected: Congressman, Clarence Van Duzer, Democrat; Governor, John Sparks, Democrat; Lieutenant-Governor, Lemuel Allen, Democrat; Supreme Judge, George F. Talbot, Democrat; Secretary of State, William G. Douglass, Republican; Comptroller, Samuel P. Davis, Democrat; Treasurer, David M. Ryan, Democrat; Attorney-General, G. E. Evenson, Democrat; Surveyor-General, Edward D. Kelley, Democrat; Superintendent of Public Instruction, Orvis Ring, Republican; Superintendent of State Printing, Andrew M. Butter, Democrat; Superintendent of State Printing, William W. Booth, Democrat, Richard Kirkman, Democrat.

The total vote cast for Governor was 11,318; for Congressmen, 10,921. Francis G. Newlands, Democrat, will have, on joint ballot in the Legislature, 44 votes, insuring his election.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Constitution June 21, 1788; area, 9,305 square miles. The population, according to each decennial census, was 141,885 in 1790; 183,858 in 1800; 214,460 in 1810; 244,022 in 1820; 269,328 in 1830; 294,574 in 1840; 317,976 in 1850; 326,073 in 1860; 318,260 in 1870; 346,991 in 1880; 376,530 in 1890; and 411,588 in 1900. Capital, Concord.

Government.—The following were the State officers during the year: Governor, Chester B. Jordan; Secretary of State, Edward N. Pearson; Treasurer, Solon A. Carter; Adjutant-General, Augustus D. Aylings; Insurance Commissioner, John C. Linehan; Labor Commissioner, Lysander H. Carroll; Superintendent of Public Instruction, Channing Folsom; Bank Commissioners, Alpheus W. Baker, John Hatch, George W. Cummings; Railroad Commissioners, Henry W. Foss, Charles F. Faulkner, E. B. S. Sanborn; State Librarian, Arthur H. Chase; Chief Justice of the Supreme Court, Frank N. Parsons; Associate Justices, William M. Chase, Reuben E. Walker, James W. Remick, George H. Bingham; Chief Justice of the Superior Court, Robert M. Wallace; Associate Justices, Robert J. Pessaie, Robert G. Pike, John E. Young, Charles F. Stone; Attorney-General, Edwin G. Eastman.

The State elections are held biennially in November of even-numbered years. The Legislature meets in January of odd-numbered years.

Population.—Of the population of the State in 1900, 410,791 were white and 797, including 112 Chinese and 22 Indians, were colored. The native born numbered 323,431, and the foreign born 88,107. There were 119,893 of school age—between the ages of five and twenty years; and there were 88,149 males of military age—between eighteen and forty-four inclusive. Of the 168,453 males ten years old and over, 12,040, or a little more than 7 per cent., could not read and write; and of the 169,410 females of the same age, 9,032, or 56 per cent., were illiterate. There were 357,893 persons ten years old and over, and of these, 178,719, or 53 per cent., were engaged in gaining their livelihood, either as wage-earners or as the proprietors of some business. Of these workers, 136,901 were males and 41,758 were females. Of the 178,719 who were at work, 38,782 were engaged in agricultural pursuits, 7,785 in the professions, 30,576 in domestic and personal service, 25,651 in trade and transportation, and 75,848 in manufacturing and mechanical business. Thus it appears that only a little more than 21 per cent. of the State's population above ten years of age can be classed as agricultural, while 42 per cent. are mechanics or manufacturers, 14 per cent. are in trade or railroading, 17 per cent. in domestic and personal service, and 44 per cent. in professional work.

There were 47,652 families, and of these 51,017 owned the homes they occupied. Of these homes, 36,078 were unencumbered and 13,514 were mortgaged. Of the 25,472 farm homes, 18,446 were unencumbered, and 6,019 were encumbered.

Finances.—Cash in the Treasury June 1, 1901, $447,907.02; receipts during the year 1901-02, $1,359,322.67; total, $1,837,229.69. Disbursements during year ending June 1, 1902, $1,291,614.57; cash on hand at same date, $575,815.12; total, $1,837,229.69. Liabilities June 1, 1901, $1,793,795.36; assets same date, $785,162.45; net indebtedness June 1, 1901, $1,008,632.91. Liabilities June 1, 1902, $1,069,071.30; assets same date, $912,838.84; net indebtedness June 1, 1902, $756,432.36. Reduction of debt during the year was $252,200.55.

The Treasurer says: "The net results of the year's business show a reduction of the State's indebtedness, notwithstanding the large appropriations of 1901 for public institutions and new enterprises. This is explained by the reduction of the annual interest charges, by the redemption of municipal war-loan 6 per cent. bonds, and the receipt from the United States of $106,372.35 for
interest on notes and bonds issued for raising and equipping the State's quota of troops during the civil war. The debt will never be free from debt, by reason of the obligations it has assumed in the acceptance of certain trust funds upon which it has contracted to pay interest forever. The Benjamin Thompson Trust fund, which originally amounted to $303,622.32, will, on Jan. 30, 1910, amount to $797,181.67. The State will have added to the original fund $433,538.35, and after Jan. 30, 1910, will be obliged to pay in cash annually to the New Hampshire College of Agriculture and the Mechanic Arts 4 per cent. on $797,181.67—an annual interest charge of nearly $40,000."

The supervision of the Bank Commissioners' 77 savings-banks, 13 banking and trust companies (7 with savings-bank departments), and 17 building and loan associations. This includes the savings banks and trust companies now in the hands of assignees. The savings-banks now in active operation show an aggregate of resources on June 30, 1902, of $70,775,851.76; there is $65,626,169.18 in cash on hand and on deposit, $58,785,785.36; the surplus and the guaranty fund amount to $10,475,692.50. Per capita deposits for the entire population of the State, $146.39. The value of deposits for the year was $3,171,429.14, and the number of depositors has increased from 142,460 to 147,929. Unwise investments in distant States, induced by high rates of interest, have wholly ceased, and, under a conservative investment law, satisfactory investments in securities proper for trust funds have taken place.

But little change in the volume of business of the building and loan associations is shown. The loans to members on homesteads on June 30, 1902, was $1,595,628.14; loans on shares, $41,640.20; loans to others not members, $38,666.08. The book value of real estate held by this associations was $65,790.90; cash on hand and on deposit, $58,785,785.36; total assets, $1,740,116.64. The withdrawals during the year were: Dues capital, $180,358.50; dues retired, $80,098.50; deposits, $58,785,785.36; surplus and guaranty fund, $10,475,692.50. The profit for the year was $30,306.62; profits matured, $53,330.93. The shares account shows additions during the year of 5,821; withdrawn, 3,127; forfeited, 25; retired, 84,219; divided other dividends, $1,741.06.

Insurance.—The report for 1901, issued May 1, 1902, shows the withdrawal of 7 companies from the State and the admission of 1. The number of companies now doing business in New Hampshire is 113—83 stock companies and 30 mutual companies—a net loss of 6. The total business transacted within the State by all authorized companies for the year was: Risks written, $1,115,451,490.96; premiums received, $1,456,852.36; losses paid, $875,384.92: a gain of about $9,000,000. The largest amount written in any previous year was $1,003,008,480.96; premiums received, $1,561,528.92; losses paid, $849,342.92. The financial condition of all the companies doing business in New Hampshire on Jan. 1, 1902, was as follows: Total paid-up capital, $44,677,875; total surplus, $140,473,705.76. By surplus to policy-holders is meant the surplus over all liabilities added to the amount paid-up capital; for both amounts are available, if necessary, for the payment of loss claims.

From 1897 to 1901, inclusive (thirty-four years), nearly all the companies, the life companies of New Hampshire and of all foreign stock and mutual companies. They believed it impossible to do business with safety and profit under that law. In 1880, however, they began to return; and business went on as before. The ratio of losses to premiums, from 1867 to 1884, inclusive, under the old law common to most of the States, was 68.81; the ratio of losses under the "valued-policy law," from 1889 to 1901, inclusive, was 50.25—fairly showing the good new law to New Hampshire and to the insurance companies compared with the old law. Nothing could induce the State to return to the old system of insurance.

Railroads.—The history of steam-roads for 1902 is mainly a repetition of last year's statement. Mileage, rentals, and dividends are precisely the same. The State, in the meanwhile, has been authorized by the Railroad Commissioners of Maine, New Hampshire, and Massachusetts to increase its capital stock $1,000,000 by issuing 10,000 shares, per voter $50.25; the increase will be expensed in the further abolishing of grade-crossings, in permanent repairs on the Worcester, Nashua, and Portland branch, and for other lawful purposes.

The electric-road mileage now in operation is 223 miles, with 10 miles more in process of construction. Their capitalization is $3,451,000 in stock and $2,160,000 in bonds, an average of about $25,430 a mile.

State Library.—This institution aims to be the central reference library of the State, supplementing the public libraries of the towns and cities, and furnishing aid to professional men, historians, scientists, and others within the borders of the State. The State has provided it with a commodious fire-proof building, well adapted for its needs. Upon its shelves are over 60,000 bound volumes, besides a very large number of unbound volumes. The average annual increase for the past few years has exceeded 6,500 bound volumes and an equal number of unbound volumes. When the legal department is the largest and most complete at present, much thought and effort is being given to the medical, historical, agricultural, scientific, religious, agricultural, other departments, the end that all may be eventually as well served as is the legal profession. Much attention has been given during the past few years to the collection of proceedings and publications of societies of all kinds, with the result that the library to-day contains one of the best collections in the country.

National Guard.—The guard consists of 1 brigade of 2 12-company regiments of infantry, 1 14-gun light battery, 1 troop of cavalry, 1 signal corps, and a hospital corps. The infantry is armed with the new obsolete breech-loading rifle, caliber 0.45, but a few of the Springfield magazine rifles, caliber 0.30 (Krag-Jorgensen), have been issued to each of the companies for rifle practise on the ranges, with the result that an unusual number of sharpshooters and marksmen have qualified. The interest in this branch of a soldier's education has been much increased.

New flag-case for the battle-flags of the war regiments of New Hampshire, the civil and Spanish wars have been erected in the Dorril Hall of the State-House. These cases, of unstained mahogany, are lined throughout with copper and encased in front with brass (not for them not only dust-proof, but practically air-tight).
The State Prison.—The average daily population for 1901–02 was 150—a little more than the preceding two years, but much less than from 1895 to 1899. There have been no escapes since 1870. Trouble with the men is practically unknown. There are but 2 female convicts.

Prisoners are now sentenced under the indeterminate-sentence act of 1901, which went into effect in May of that year. Eight have been paroled under that act, but so recently that nothing can be said concerning the results. The most effective inducement to the convicts to submit bravely and patiently to their duties during their imprisonment is the provision for commuting sentences for good behavior.

State Hospital.—The sum of $15,000 was appropriated by the Legislature to provide fire-proof elevator wells for the food-elevators, a tower containing an iron stairway to serve as a fire-escape for the chapel building, a new oven and tile floor for the bakery, and a new cottage for the head farmer.

The summer sanatorium, located at Lake Penacook and distant 4 miles from the hospital proper, continues to be a most useful supplement to the remedial equipment of this institution. This addition now includes 50 acres of land, 2 cottages for men and women patients, besides small stable and barn. An average of 30 patients have been accommodated there during the summer months.

The Training-School for Nurses has been eleven years in successful operation. Its efficiency has been greatly increased during the past year by an alliance with the Concord District Nursing Association. Every nurse prior to her graduation must have served a certain number of weeks in district nursing under the direction of a head nurse employed by the association. In this way the nurses of the State Hospital acquire a fine drill in house-to-house nursing outside the hospital, which, with their experience in the wards, broadens and perfects their education.

During the summer months the open-air treatment of insanity has been pushed to the furthest limit possible consistent with the physical condition of the patients. Tuberculosis patients were cared for in a tent, and all whose physical condition admitted were placed out on the grounds. Out of a population of 470, as many as 440 were out of doors. The results of such treatment were eminently satisfactory, both in promoting increased nutrition and in quieting such as were restless and excitable.

Soldiers’ Home.—The inmates of the home number from 80 to 100 through the year. Up-

STATE LIBRARY, CONCORD, NEW HAMPSHIRE.

ward of 500 soldiers have resided there, and the deaths number 105. The cost of individual maintenance of members is about $210 a year.

The home is in the town of Tilton, 20 miles from the capital, and is located on a beautiful eminence half a mile from the village. Its original cost was $40,000, and it has been maintained at an annual expense to the State of about $10,000. Over and above the amounts received from the United States Government under general law. The Governor of the State is, ex officio, chairman of the Board of Managers; secretary, Col. Daniel Hall, of Dover; the commandant, Capt. Ervin H. Smith, of Peterborough.

Dartmouth College.—The total enrolment of students for the academic year 1902–’03 is 789—an increase of 21 over the preceding year. Of this number, New Hampshire has 220; Massachusetts, 284; and the remainder come from 25 different States and foreign lands.

State Agricultural College.—There was in the year some increase in the grade of work and the requirements for admission. The college is so related to the recently adopted courses of study in the State high schools that the graduates of these
schools can be admitted without examination. The courses of study in mechanics, in electrical, and in chemical engineering have been considerably improved. In more marked degree the agricultural course has been strengthened. A special building for agriculture is being erected at an expense of $30,000. It will be ready for occupancy early in 1903.

Normal School.—This year the enrolment was 140, an advance of 40 per cent. over the previous year. The model school is well equipped, and is under the supervision of 2 teachers who are specialists in their respective lines. It has a liberal course of study, including nature study, art work, and manual training, and is thoroughly up to date. In the Normal School the work in each subject has been placed under the direction of heads of departments. Room and apparatus have been provided for thorough physical training, partly through the agency of the Students' Athletic Association. The school has a well-chosen library of 5,000 volumes, while a special reference library of text-books has just been established. The principal of the school is Mr. J. E. Klock.

Board of Health.—The most important work of the Board of State Laboratory of Hygiene. In its chemical department much attention has been given to the analysis of public and private water-supplies with excellent results. New methods have been discovered, and its causes eliminated. In its 2 bacteriological departments many examinations have been made for the determination of tuberculous, typhoid fever, dysentery, malaria, etc., which have proved to be of great value. Smallpox has existed in various parts of the State for two years, and the board has been indefatigable, and very successful, in its efforts to stamp it out.

The State Board of Health also constitutes the State Board of Commissioners of Lunacy, having authority to commit worthy indigent patients to the State Hospital for treatment at the expense of the State.

Charities and Corrections.—The Legislature of 1901 provided for a secretary and clerk outside the membership of the board; for the return of accurate statistics of all pauper relief given by towns throughout the State; that all the county reception boards be furnished with certain statistics as to the insane, feeble-minded, and prisoners, to be returned to the board; for an indeterminate sentence of prisoners; and that the State school for the feeble-minded, appropriating $30,000 therewith to establish it. This school has been located at Laconia, and will be opened Jan. 1, 1903, with about 60 pupils. By this action of the Legislature the Board of Charities was put upon a level with the other State departments, and its scope largely increased.

Old Home Week.—This distinctively New Hampshire festival was celebrated with more than the usual enthusiasm by 100 towns and cities. It brought back to the State thousands of her long-absent children, and was an interesting augmentation of the bulk of the summer travel. New roads through the mountain passes, under the patronage of the State, and new and magnificent hotels are meeting the visitors at every turn.

Antisaloon League.—The principal officers of the league for 1902 are: President, Hon. D. H. Goodell; superintendent, Rev. J. H. Robbins. The business of the league has been prosecuted with the greatest success. The question of a change of the State policy from absolute prohibition to license or local option came prominently before the people at the biennial election in November, and will be brought before the Legislature for consideration at its coming winter session. Some of the purposes of the league are to insure united action in the churches in the cause of temperance; to enforce all temperance laws; to secure advanced additional prohibition legislation; and to circulate temperance literature freely among the people.

Bureau of Labor.—The biennial report of this department for 1901-02 was issued in December. It reports unusual activity and prosperity in all departments of business, and gives some interesting and exhaustive statistics concerning the foremost industries of the State. In manufactures, for 1891, the cotton interest leads, with manufactured goods to the value of $29,143,600; with boots and shoes a close second, $22,988,159. The woolen, lumber, paper, and granite industries have made remarkable strides, the business of each running into the millions, while many other industries are reported as equally prosperous. The New Hampshire creameries, in quality of goods manufactured, lead the whole country, as shown by the shipments of a half a million cases, in 1893, and at Buffalo. The number of creameries reported is 50.

State Grange.—The Grange of New Hampshire is Gov.-elect Nahum J. Bachelder. Its present membership is 25,109, and it has held 6,000 meetings during the year. Its receipts have been $8,858,48, and its surplus for the year is $68,900. It encourages the observance of Arbor Day by offering prizes to subordinate granges for the planting of shade-trees by the country roadsides, the number of such trees, 50,000 for fourteen years the Grange Mutual Fire-Insurance Company has been maintained, furnishing insurance exclusively to its members. Property upon which policies are now in force exceeds $6,000,000. All losses and expenses have been promptly met, and the saving to the insured in premiums since the inception of the company has exceeded $100,000, as compared with the cost of insurance for the same amount on the same property in stock companies.

There are more than 3,000 summer hotels and boarding-houses in the State, including the most costly and elegant summer hostelry in the United States, and they accommodate 75,000 guests. About 1,200 (abandoned?) farms have been purchased, chased by wealthy students for summer homes, who have expended nearly $3,000,000 on their purchases in addition to the purchase price.

Political.—The whole number of votes cast for Governor at the November election was 79,162, as follows: Nahum J. Bachelder, Republican, 42,115; Henry F. Hollis, Democrat, 33,844; John C. Berry, Prohibition, 1,621; Michael H. O'Neill, Socialist, 1,057; scattering, 825. Republican plurality, 8,271.

The new Legislature consists of 24 Senators — 21 Republicans and 3 Democrats; House of Representatives, 393 members—236 Republicans and 137 Democrats.

The Governor's Council consists of 5 members, all Republicans.

Constitutional Convention.—The Constitution of New Hampshire has remained unchanged since 1889. The General Court (the Legislature), by an act approved March 21, 1901, provided for the election, on Nov. 4, 1902, of delegates to a constitutional convention, to assemble at Concord in the following December. The convention assembled as provided, and finally submitted to the people for ratification 9 amendments to the Constitution, as follow:

1. For the prohibition of trusts.
2. For the extension of the suffrage to women.
3. For a tax on inheritances and franchises.
4. For an educational qualification of the suffrage.
5. To strike the word "Protestant" from the bill of rights.
6. To place representation in the Legislature upon a new basis.
7. To establish voting precincts.
8. To extend the criminal jurisdiction of police courts.
9. To require examination of commissioned officers in the militia.

Statute to Commodore Perkins.—A noble and elaborate monument to Commodore George Hamilton Perkins, a son of New Hampshire, given to the State by his widow and his daughter (Mrs. Isabella Anderson), was unveiled in the State-House grounds, at Concord, April 25, the fortieth anniversary of Farragut’s battle of New Orleans. The exercises were attended by many distinguished naval and military men and civilians. The oration was by President William Jewett Tucker of Dartmouth College. The monument stands on North State Street, in the rear of the State-House and near the Legislature building. The statue is work of Daniel C. French, of New York city, a native of Chestor, N. H. The general structure is of New Hampshire granite, while the statue is of Tennessee marble. The statue (bronze), which stands in the niche, is 74 feet in height. Elaborate panels and historical inscriptions occupy appropriate places on the monument. Its cost was about $49,000.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles. The population, according to each decennial census, was 184,139 in 1790; 211,149 in 1800; 245,562 in 1810; 277,426 in 1820; 320,823 in 1830; 373,306 in 1840; 489,555 in 1850; 672,093 in 1860; 900,006 in 1870; 1,131,116 in 1880; 1,444,923 in 1890; and 1,983,009 in 1900. Capital, Trenton.

Government.—The State officers in 1902 were: Governor, Franklin Murphy; Secretary of State, George Wurtz; Comptroller, William S. Hancock; Attorney-General, Samuel H. Grey; Adjutant-General, Alexander C. Oliphant; Superintendent of Public Instruction, Charles J. Baxter; Treasurer, Charles D. Richardson; and, Insurance, William Bettle—all Republicans. Chief Justice of the Supreme Court, William S. Gummere; Associate Justices, Gilbert Collins, J. Franklin Fort, John B. McMillan, Charles W. Syckel, Charles G. Garrison, Abram Q. Garretson, and Charles E. Hendrickson; Court of Errors and Appeals; Judges John W. Bogart, Gottfried Krueger, Frederic Adams, William H. Vredenburgh, Peter V. Voorhees, and Garret D. W. Vroom. Chancellor, William J. Magie.

A general election is held annually in November. The only elective State officer is the Governor, whose term is three years. The others, including the Justices of the Supreme Court and the judges of the Court of Errors and Appeals, are appointed by the Governor, excepting the Treasurer and the Comptroller, who are appointed by the Legislature, which meets every year in January, the sessions not being limited.

Finances.—At the close of the fiscal year ending Oct. 31 the State fund was $2,933,418.26; the school fund (including the school tax for 1901, $1,488,806.73), $5,401,789.42; local taxation on railroads, $1,460,974; allotment of taxes on railroad and canal property to the taxing districts, $200,461.93; Agricultural College fund, $110,000; total, $9,112,454.06. The sinking fund of the State consisted of the following assets: Loans on bonds and mortgages, $91,783.34; real estate, $77,974.20; due from Thomas Crozier decree, $1,000; balance in bank, Oct. 31, $1,792.52; total, $172,565.03.

Valuations.—The State Board of Taxation, in its annual report, Oct. 31, placed the total valuation of taxable real and personal property for 1902, as returned by the county boards of assessors, at $852,560,840, an increase of $41,141,798 over the ratables of 1901. Of this total of ratables, $827,500,112 represents real estate, and $153,233,028 personal property.

The amount of exempt property for 1901 was $107,318,912. This, with the $67,474,442 of exemptions allowed veterans, firemen, and militia, makes a total increase of $63,062,048 over the exemptions of 1901. Of the amount of exempt property, $15,261,000 is for the exemption of public schools, $7,792,923 for other school property, $40,922,004 for public property, $35,171,711 for church and charitable property, and $4,250,290 for cemeteries and graveyards. The deductions for debts in the State amount to $21,756,071, compared with $26,006,779 in 1901.

The returns of the ratables in the counties for 1902 show a net increase of $34,141,798 over the valuations of 1901. All the counties show an increase except Burlington and Hunterdon.

The valuations in each county for 1902, compared with the valuations of personal property, show that the assessed value of real estate represents 84.4 per cent. of the whole.

The total valuation of real estate was $827,500,112; of personal property, $153,233,028.

The number of taxable corporations has steadily increased from 619 in 1894 to 8,065 in 1902, this latter figure being exclusive of about 300 corporations subject to tax under the provisions of the Voorhees franchise act of 1900, and being also exclusive of the great number of corporations that are exempt from State tax by reason of being engaged in manufacturing or mining carried on in New Jersey. There are, in fact, about 15,000 corporations carried by the State Board of Assessors. As a result of the assessments levied by this board, there was paid into the State treasury on account of miscellaneous corporation taxes for 1902 the sum of $1,791,070.74, and the amount of taxes levied in previous years the further sum of $177,128.66, which is exclusive of $569,237.55 received by the Secretary of State for the year and paid into the treasury for incorporation and business licenses.

The total receipts from miscellaneous corporations in the fiscal year were $2,537,445.72, an increase over the last fiscal year of $34,563.95.

The aggregate assessed valuation of the railroad and canal property is given as $223,461,784, an increase of $3,537,205 over the previous year. The total tax levied against the railroad corporations by the State was $1,529,555.11, against $1,600,554.75 for the previous year. Of this total tax, $1,117,308.91 is for State uses and $410,946.20 for local uses.

Industries.—The preliminary census report on the manufacturing industries of New Jersey, issued Jan. 16, 1902, showed a total capital of $535,824,085, an increase of almost 101 per cent., and value of products in 1900 of $611,728,933, an increase of almost 73 per cent. There were 15,481 establishments, increase 68 per cent.; $41,381 wage-earners, increase 101 per cent.; total hired force, $41,981 wage-earners, increase 101 per cent.; total industries, $500,181 wages of $110,981, increase of almost 33 per cent. The miscellaneous expenses increased 131 per cent., to $42,640,143, and the cost of materials used was $353,941,870, an increase of 91 per cent.
Banking.—The report of the State Banking Commissioner to the United States Comptroller showed the condition of the trust companies, savings-banks, and State banks for the quarter ending Sept. 15. There were 51 trust companies, 17 State banks, and 27 savings-banks. The condition of the trust companies was shown to have been as follows: Resources, $99,995,256.74; liabilities, $72,463,715.22. Notes and bills rediscounted, $74,300; bills payable, $850,000; bonds outstanding, $1,150,000; other liabilities, $573,600; total, $99,995,256.74. The statement of the State banks showed the following condition: Resources, $11,458,437.17; liabilities, $2,526,437.17; bills payable, $25,000; other liabilities, 4,600; total, $11,658,437.17. The condition of the 27 savings-banks was reported as follows: Resources and assets, $79,621,110.12; liabilities, capital stock paid in, $500,000; amount due depositors, $70,107,420.40; liabilities other than those stated, $228,442.29; surplus, $3,731,249.93; total, $79,621,110.12.

Distribution of Products.—The chief of the New Jersey Bureau of Statistics compiled in December a statement showing the distribution of the product of the large manufacturing industries of the State, and the output of the first compilation of the kind made, and has to do with the distribution to capital account. The report of the bureau contains a classified list of 62 distinct industries, and the industries given, and the firms reporting have a combined capital of $225,000,000. In felt hats the industry product is $4,014,197, which is $1,530,32 per $1,000 of capital employed. The amount of the industry product devoted to profit and minor expenses is $2,510,045. The number of firms reporting was 48. The percentage of industry product devoted to profit and minor expenses was only $32.88. In shoe manufacturing 41 firms reported, yet only $2,152,079 in capital is employed. The ratio of the industry product devoted to profit and minor expenses is 4.37 per cent. In iron the percentage of industry product devoted to profit and minor expenses is less than one-third. In jewelry it is 0.23 per cent. Silk manufacturing is the most important industry included. The product is $14,296,518, and the amount per $1,000 of capital employed is $705.42. The amount of capital is $20,252,319, while the ratio of industry product devoted to profit and minor expenses is 47.74 per cent.

Factories.—The State Factory Inspector submitted his annual report in December. It shows that in the last fiscal year the department had more than 900 schooners and participating bakeshops, as a result of which 187 children were discharged. It sets forth that in the year 19 persons were killed and 68 injured because of accidents in factories and mines. The general conditions of all industries inspected was good, although some of the bakeshops were reported to be very dirty, especially in Jersey City and Paterson. The year was one of unprecedented prosperity, and there was greater industrial activity than ever. The consequent increased demand for labor rendered special activity necessary for enforcement of the child-labor laws. Prosecutions of offenders were instituted in the local courts, and the penalties provided by law were imposed.

Agriculture.—The report of the Secretary of the State Board of Agriculture, filed in November, shows that the year 1902 was one of the most prosperous in the agricultural history of the State. The white-potato crop exceeded all previous records, and the yield of large potatoes was unusually large. The potato-farmer was far in excess of any previous year. The report says that "for so small a State, and with so much territory taken up with truck-farming and market-gardening, the crops of grain have been remarkable. The increase in the production of corn and in the acreage devoted to its growing is indicative of an increase in the dairy business. The indication of increased meat consumption, when coupled with the fact that during the past year 17,127 cows were brought into New Jersey from other States, a number largely in excess of other years, confirms the conclusion. The farming interests of the State represent a business with a capital of $105,359,106. The only short crop was of hay, and this shortage is attributed to lack of rain. The yield is about 10,000 tons less than in 1901.

Of the various crops, the report says that oats were better than for some years past. Rye, an average crop. The acreage of buckwheat is being reduced each year. The production of sweet potatoes is being extended in the lighter soils of the southern part of the State. The crop is large and valuable.

The report places the total value of the farms of the State for 1902 at $43,528,671. It gives the number of farms as 34,650, and the improved land, capable of profitable cultivation, is 1,977,942 acres. It says that land devoted to food or fertilizers $2,165,320 worth. Although farm-laborers seem hard to obtain, there is expended for this item $8,261,000. The stock comprising the flocks and herds, horses, mules, and other animals, is valued at $17,613,630.

Ceramics.—The Legislature at its last session passed an act providing for the establishment of a course in practical and scientific instruction in the art of clay-working and ceramics in the State Agricultural College, and appropriated $12,000 for the organization and equipment of the department for the current year, and $2,500 annually for its maintenance. The report of the Board of Visitors, issued in December, spoke very favorably of its progress. A laboratory, thoroughly equipped, had been erected and the work of instruction in ceramics is begun. The trustees received a gift of $50,000 from Ralph Voorhees, a resident of New Jersey, for a library building, which is to be erected immediately.

Education.—The report of the School Superintendent, submitted in December, gives the statistics of the high schools of the State. As this was the first time that the data were collected, no comparison could be made with previous records. Of the 394 school districts in the State, 147 report full or partial high-school courses. In these 147 high schools there were 20,980 pupils, 5,159 boys and 7,821 girls, or 3.8 per cent. of the entire school enrolment. In the 247 districts that have not established high-school courses there were 1,504 pupils, which were doing high-school work. In the 147 high-school districts there were 603 teachers. They received $511,291,18. The total cost of maintaining these schools was $611,312,94. Sixty-nine schools maintain courses of study covering four years' work. Of these, 55 are on the approved list, which means that graduates of these schools are admitted to the State Normal School without examination.

The State Librarian, in his annual report made in December, noted a great falling off of interest in the traveling-library system. At the close of the fiscal year 23 of the 62 traveling libraries were in use, against 42 in the preceding year. Twenty-two towns discontinued their use, while only 4 new towns took it up.

The educational exhibit from New Jersey at the Charleston Exposition won both the gold and silver medals. The New Jersey Normal and
Model School, which had a separate exhibit, won a gold medal, as did the New Jersey School for the Deaf. The insect exhibit won a gold medal; it was said to be the finest collection of wood- and grain-destroying insects in the country. The State Museum won the whole set of medals—gold, silver, and bronze.

The Registrar of Princeton University gave out the report of the entrance examinations for the university on June 25 as 229 for the academic course and 212 for the scientific, against 247 academic and 268 scientific the previous year. The falling off was principally from the Middle States. The entrance rolls showed that New York city leads. Dr. Francis L. Patton resigned the presidency of the university July 31, and was succeeded, Aug. 1, by Woodrow Wilson, LL. D. Dr. Patton was elected president of Princeton Theological Seminary, Oct. 14. Three summer schools were in operation at the university during the summer.

Prisons.—In the annual report of the Board of Prison Inspectors it was stated that the striped-dashing, lock-step, and short-hair system should be abolished and recommended that a separate institution for women should be built on the site of the present State arsenal adjoining the prison. The inspection of the women of the prison, 20 of the number being white and 11 colored. It appeared from the supervisor's report, Nov. 1, that at the beginning of the fiscal year ending Oct. 31 the number of prisoners confined in the institution was 1,168. During the year 516 of these were removed. The number received in the year was 431, so that the number remaining Nov. 1 was 1,021, or 85 fewer than at the beginning of the year. The terms of 407 prisoners expired, 5 were discharged by the United States commissioner, 1 was pardoned by the President, 15 were removed to the insane asylum, 6 were pardoned by the Board of Pardons, and 61 were paroled.

Charities and Corrections.—According to the report of the Trustees for the State Home for Girls for the year ending Oct. 31, the number of girls committed to the home in the year was 24. The number sent out was 29, most of whom were well in good homes. The number of girls in the institution at the date of the last annual report was 119. At present there are 114. The addition of a new cottage has proved to be of great advantage, helping more and better work to be done. All departments are more successful than in former years. At a meeting of the treatment committee was held, and was attended by all members.

The health of the inmates has been good.

According to the superintendent's report for the fiscal year ending Oct. 31, the Home for Boys cared for 500 in the year. It received 160, and discharged 163. Boys were received from every county in the State, with the exception of 3. The health of the boys was very good. There were but 2 deaths. There seemed to be a more contented and happier feeling among them, due largely to the policy of making the boys understand that their release depended entirely upon their own behavior and individual merit, and not upon any outside influences. The blacksmith, carpenter, and mason shops were very successful, all these departments being in every way on a par with the others, and all the boys very much interested in their work. The results from the garden and factory were also satisfactory; there was an abundance of fruit and melons during the season, and this contributed largely to the unusually healthy condition of the institution.

The Governor, approved, in October, the erection of the Tuberculosis Sanitarium on Mount Kipp, an elevation of 954 feet in the range of mountains near Glen Gardner. The site is unequaled in the State for this special purpose. It was decided to build one large central building for the patients. A macadamized road from Glen Gardner was begun.

The annual report of the Board of Managers of the Insane Asylum, submitted in December, reiterated the recommendation for a separate asylum for the convict and criminal insane, and deprecated the failure of the State to provide for the removal of the epileptics from the insane Asylum. It called attention to the fact that in several counties the places designated as "asylums," although receiving State aid, are without any organized care, adequate medical supervision or proper attendants or nurses. The total population of the 6 county asylums was 553, of whom 292 were males and 273 were females. The report referred to the overcrowded condition of the State Hospital in Trenton, which contained 1,137 patients, although the present buildings were designed for only 840. The total expenditure in the year was $236,674.90, and the per capita expense per week for maintenance was about $380.

The Epileptic Village.—The annual report of the Board of Managers of the Epileptic Village shows that, although the place is a model one in many respects, there is still much to be done. The village was opened in 1898, and since then 9 of the patients have been cured, 4 transferred to other institutions, 4 removed by relatives, 2 died, and 3 have elapsed. In the past year 25 male and 29 female epileptics were admitted, and the total population at this time is 75.

It is estimated that there is 1 epileptic to each 500 of the population. A conservative estimate would place the total number at more than 2,500. There is a large number of epileptics confined in the hospitals for the insane and other institutions throughout the State that properly belong in the village.

Forestry.—Forest Bulletin No. 11, issued by the Geological Survey, tells of the first extensive, systematic, and successful experiment in forest cultivation made in the State, after eight years' practical work. The forest was established on照 reporting Ramapo river. The forest was divided into 10 parts, of 300 acres each, and every year one of these divisions was taken in hand. The result of the treatment has been successful, both from a sylvicultural and a financial point of view, and is described at length in the bulletin.

New Jersey has 3,324 square miles of forest area that could be subjected to this treatment. The forests of the State suffered great damage from fire in 1902.

Interstate Fair.—The Interstate Fair closed on Thursday, Oct. 4. Notwithstanding the bad weather, the fair was very successful. More than 89,000 persons attended it. The profits were less than in 1901, but there was a considerable remainder after paying all expenses. The exhibition of cattle, sheep, and swine exceeded that of former years. At a meeting of the Board of Directors of the association, Dec. 10, it was decided to pay a dividend of 7 per cent, on $20,000 worth of preferred stock, and 2 per cent. on $115,000 worth of common stock.

Disasters.—On March 3 a flood at Paterson placed the list of the boys lying in the city under water. The East Jersey Water Company was damaged to the extent of $1,500,000, and the entire damage amounted to several millions. Only two lives were lost in the city, but several persons per-
ished at other points of Passaic river. The bridge from Passaic to Dundee island was destroyed, and 6 persons who were trying to get floating lumber were swept away and drowned.

The worst fire in the history of Atlantic City occurred on April 3, in which 11 of the principal hotels were burned to the ground. The direct property loss considerably exceeded $1,000,000.

On March 19 the Phenix line pier, in Hoboken, and the steamer British Queen, besides a dozen lighters and barges, were burned. Two men were killed and 6 were injured. About $2,500,000 worth of property was destroyed. The fire was due to defective electric-light wires.

A fire that started at midnight in Paterson, Feb. 8, burned unchecked for eighteen hours, and destroyed the heart of the business section, with a loss of property values at $18,000,000, including the City Hall, 5 bank buildings, the public library containing 200,000 volumes, 5 churches, 2 hotels, 2 schoolhouses, police headquarters, 1 fire-engine house, 1 theater, the Hamilton Club, and more than 40 stores, office buildings, and public halls.

Legislative Session.—There were 295 bills passed by the Legislature. Of these, the Governor signed and vetoed 15. Among the more important acts were these:

- Providing for the study of ceramics in the State Agricultural College.
- Allowing the State Board of Education $45,000 for a manual training-school for colored youths.
- The antianarchist bill, which forbids any attempt to destroy Government by writing or speech, or to be a member of any organization for this purpose. The penalty is $2,000 fine, or fifteen years' imprisonment, or both. Any person that assails high Government officials or encourages such assault shall be put to death or imprisoned for life.
- An act appropriating $20,000 for a new dormitory at the Old Soldiers' Home at Kearny.
- A general school act, which allows school boards to condemn land for school purposes, excludes teachers who have not been vaccinated, and renders parents and guardians liable to a fine for keeping their children from school for ninety days, if they fail to compel their children to attend school.
- Appropriating $250,000 for Trenton armory.
- Creating a State Board of Agriculture, and allowing only licensed architects to practise in the State.
- Making it illegal to catch any food fish for the purpose of manufacturing therefrom any oil or fertilizing food.
- Authorizing cities to borrow up to $100,000 on bonds for purposes for which taxation may be raised.
- Amending the corporation act, so that any stockholder who is dissatisfied with a merger may have his stock appraised.
- Providing for the establishment of a State sanatorium for the treatment of tuberculous diseases.
- Requiring that children who become a public charge shall be placed in care of some family of the same religious faith as that of the parents, or of an institution of that kind.
- Limiting the money to be raised by cities for city purposes to $2 on every $100 assessed valuation.
- Appropriating $10,000 for a monument to the New Jersey men who fell at Antietam.

Political.—The election for members of the Legislature, in November, resulted in the return of 14 Republicans and 7 Democrats to the Senate, and of 38 Republicans and 22 Democrats to the Assembly. The Republicans elected 7 Congressmen; the Democrats, 3.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,516 in 1860; 91,874 in 1870; 119,565 in 1880; 153,593 in 1890; and 163,910 in 1900. Indians not taxed in 1890, 12,837. Capital, Santa Fe.

Government.—The Territorial officers in 1902 were: Governor, Miguel A. Otero; Secretary, J. W. Raynolds; Treasurer, J. H. Vaughn; Auditor, W. G. Sargent; Adjutant-General, William H. Whitehead; Attorney-General, E. L. Barlett; Superintendent of Education, J. Francisco Chavez; Commissioner of Public Lands, A. A. Keen; Coal-Oil Inspector, John S. Clark; Public Printer, James D. Hughes—all Republicans. Supreme Court—Chief Justice, William J. Mills; Associate Justices, John R. McKie, Benjamin S. Baker, Frank W. Parker, and Daniel H. McMillan; Clerk, José D. Serna—all Republicans.

The Legislature meets biennially, in January of the odd-numbered years. The members are elected at the preceding general election in November. The Governor and Secretary are appointed by the President, and hold at his pleasure. The judges of the Supreme and District Courts are also appointed by the President, and hold under the same tenure. All other general officers of the Territory are appointed by the Governor, with the advice and consent of the Council, which is the upper branch of the Territorial Legislature, and consists of 12 members, elected by the people of the respective county districts. The only officer elected by the people of the Territory at large is the Delegate in Congress.

The Legislature elected in November, 1902, consists of 12 Republicans and no Democrats in the Council, and 20 Republicans, 3 Democrats, and 1 Independent in the House.

Political.—The Republican Convention to nominate a candidate for a delegate was held at Raton in October, and Bernard S. Rodey, then the sitting Delegate, was nominated for reelection. A platform was adopted, approving all the general principles of the Republican party, declaring strongly in favor of the admission of New Mexico, Arizona, and Oklahoma to the Union as States, and giving cordial support to the policies of the present national administration.

The Democratic Convention to nominate a candidate for delegate was held at Albuquerque in October, and nominated Harvey B. Ferguson, who was elected as delegate by the Democrats in 1896, and served one term. The platform declared in favor of the admission of the Territories to statehood, approved the general principles of the Democratic party, and vigorously condemned the expansion and tariff policies of the present national administration.

During the campaign the speakers and newspapers of both parties gave their attention chiefly to the statehood issue, all being equally earnest in its support, but the people of the Territory believed that the chances of admission would be better with a Republican Congress if the result of the election should show the existence of a predominant Republican sentiment in the Territory, and some believe that for that reason many Democrats voted for the Republican candidate as a matter of policy. How strong a hold this feeling had upon the voters of the Territory may be judged.
by the fact that, while the normal Republican majority of New Mexico is not more than 3,000, Mr. Rodey was elected by a majority of almost 10,000 out of a total vote of only a little more than 35,000, and over a man who was personally very popular.

**Finances.**—The financial standing of the Territory is excellent. Careful and competent management of the public business has made it possible to accumulate a surplus in almost every fund in the treasury, enabling all obligations to be met promptly, leaving a handsome surplus to be used in the reduction of the interest-bearing debt.

The bonded debt of the Territory outstanding at the beginning of the fiscal year, June 1, 1902, was $1,125,300. Since that time sinking-funds have been accumulated sufficient for the redemption of the bonded debt in the sum of $89,246.26, leaving the net bonded indebtedness at this time $1,035,053.74. For more than a year endeavors have been made by the Territory to buy unsecured bonds without success. Many orders have been filed to take up any bonds the Territory might issue, and there has been a wide demand for court and other securities. The Territorial tax levy for all purposes is 13.99 mills, which is below the average in the Western States.

**Banks.**—There are 14 national banks in the Territory, with an increase of one from last year. In addition there are 12 banks operating under the Territorial laws, a total of 26 banking institutions, having resources aggregating $10,000,000, with deposits of more than $7,600,000.

**New Corporations.**—The records of the Secretary's office show that the number of corporations chartered during the year was 205, and the aggregate capitalization was $100,489,000. Of the corporations so organized, 110 were for the purpose of mining, milling, and smelting, having a combined capitalization of $73,017,630; 63 were for manufacturing and other industrial pursuits, with a capitalization of $4,796,500; 6 were bank, building and loan associations, with a capital of $4,830,000; 6 were railway companies, with a capital of $15,825,000 to construct 354 miles of new road; 10 were irrigation and land-improvement companies, with a capitalization of $2,011,000; and 10 were benevolent and charitable associations. At the end of the year there were 41 in the number of industrial corporations chartered over the previous year, and 1902 shows a gain of 53 over 1901. Among the important industries that have been established during the year are the smelting of copper and lead ores, with a product valued at nearly $1,000,000; flour-milling, with a product valued at $551,108; the scouring of wool, with $77,875 as the receipts for last year's work. The flour and grit mills number about 20, and there are numerous fruit-canners, distilleries, and wineries in operation. There are 21 saw-mills in the Territory, with an invested capital of $160,786, employing 243 men, earning $80,851 a year, whose annual product is worth $290,527. There are 13 planing-mills, employing 41 persons, which turned out in 1902 valued at $290,000.

There were but few failures in any of the industrial lines, the only one worthy of note being that of the Cochiti Gold-Mining Company.

**Railroads.**—The era of railroad building in New Mexico, which began in 1901, continued with unabated vigor through 1902. About 350 miles of new road have been added to the total mileage in operation, and operations are in progress on other new lines, which cover in the aggregate more than 800 miles.

Nearly all the immigration during the past year has been to points along the line of the newly opened railway, running diagonally through the southeastern portion of the Territory. That section of New Mexico, a district a little larger than the State of Ohio, and embracing valuable natural resources, has remained practically unsettled because of the lack of communication with the outer world, but since the opening of the Rock Island Railroad last spring a large number of home-seekers have made homesteads upon the public lands, a score or more of new villages have sprung up in the district, and 23 new post-offices have been established.

**Lands.**—A little more than a million acres of the public domain in New Mexico was taken up by settlers under the United States land laws in 1902. Under the act of Congress of June 21, 1887, giving a limited area of the public lands to the Territory for the benefit of educational and other purposes, the United States Commission has selected, located, and entered for the centers of institutions $29,026.28 acres, including 7,683.25 acres of saline lands.

The United States Court of Private Land Claims practically completed in 1902 the duty assigned to it by the Congress under which it was created, and its term will expire by limitation in the summer of 1903. Since its organization this court has adjudicated the title to tracts of land in this Territory aggregating a little more than 26,000,000 acres, all of which, except about 1,000,000 acres, was found to be public land, and was restored to the public domain, thus adding 25,000,000 acres (the best lands in the Territory) to the area that will some time be open to entry under the United States land laws. At present all the lands of this great sum total are out of market—that is, they have not been surveyed and platted, and therefore can not be entered by home-seekers.

Immediately after the organization of this court one of the judges spent a year in Spain, and another spent an equal length of time in Mexico, examining the archives of those countries from the time the first grant of land in this Territory was made by Spain down to the time the country was acquired by the United States, and during their absence the other 3 members employed the time gathering testimony and examining the early records of the Mexican and Spanish governments, and when the court began to adjudicate the cases coming before it, its 5 members undoubtedly possessed a more comprehensive and accurate knowledge of the history and character of the grants in New Mexico than any other 5 men in the world, and a good idea of the thoroughness and correctness with which they did their work is to be gained from the fact that none of their decisions has been reversed by the Supreme Court.

A large number of the pretended grants were found to be spurious and were thrown out in their entirety; and nearly all those that had some foundation in law or fact to rest upon had been so egregiously inflated by having their boundaries extended from time to time at the will of the grantee that some of them had come to claim a greater number of square miles than they had originally of acres.

**Education.**—The educational interests of New Mexico made gratifying progress in 1902. The school census for the year shows the school population to be 62,864; increase over the previous year, 9,856, or 18.6 per cent. The enrolment of pupils in all schools in progress is 21,904; an increase over last year's enrollment of 13.8 per cent. The attendance, 29,825; number of schools, 725; teachers employed, 1,046; number of higher Territorial institutions, 7; city high schools, 7; kindergartens, 4; private schools, 6. The average number
of months taught in all schools, 7,35. The total paid to teachers was $412,340.28; annual receipts, $88,018.70; and the total was $51,608.22; total value of school property, $2,071,702.25.

There was expended in improvements on public-school property $242,617.60. The average monthly salary of all teachers was $34.91. The average annual cost of educating pupils in all schools was $17.07.

In 1902 the United States Government expended approximately $225,000 for educational work among the Indians. Thirty-three schools were maintained, and there was an average daily attendance of 2,114. The larger number of these institutions are in the Dakotas, but some are in the plains and the mountains of the South. The patrons are manual training-schools and boarding-schools, and they supply the pupils with clothing as well as board and lodging.

The annual meeting of the Teachers' Association of the Territory was held at Las Vegas on Dec. 22 and 23, and was well attended. The reports from the various districts were all very encouraging and went to show that the cause of popular education has been making gratifying progress.

Minerals.—A very large area of coal, iron, and oil-bearing lands has passed to private ownership during the year, and energy operations have been inaugurated for their development. Oil-drill rigs are at work in 5 or 6 different districts, with every promise that New Mexico will become a contributor of merchantable oil before many months. Several new and important coal camps are being established, and notable gold and copper discoveries have been made. The growth and development of the mining and coke industry gives employment to 2,000 persons, and the machinery and operating plants are valued at $175,000. The net output for the coal-mines for the year 1902 was valued at the mines at $1,600,988.90. The coke production for the year amounted to 25,012 tons, valued at $38,207. Of gold, silver, lead, and copper, the Territorial production for the year 1902 was: gold, $19,000; silver, $7,000,000; and the turquoise mined in New Mexico is put by the same authority at about $138,000.

Irrigation.—Some progress was made in the construction of irrigation works, though comparatively little, for the reason that practically all the natural openings for the construction of successful irrigation systems on a small scale have already been utilized, and whatever is done hereafter to increase the area of irrigated land must be done by the construction of works too expensive and costly to be compensated by individual effort of such magnitude, as the building of dams to conserve the flood waters of the streams and the construction of reservoirs to store the storm waters of the country, especially the mountainous regions. The total length of irrigation ditches in operation in the Territory is estimated by the Governor, in his annual report for the current year, at a little more than 3,000 miles, and he places the cost at $6,900,000.

Livestock.—The live-stock interests of New Mexico were fairly successful during the year 1902. 133,835 head of cattle were inspected for removal from the Territory. One hundred and sixty head of beef-raisers from such shipments were about $3,000,000. There were 1,246,237 head of cattle on the range. The wool-clip for the year was $6,000,000. The sheep-clip in the spring was about 1,000,000 head, and there are on the ranges of New Mexico nearly 5,000,000 head of sheep. The shipments for the year were 408,908 head. TheAngora goat industry is enjoying great prosperity. At a conservatisme, the live stock on the ranges of New Mexico has a value of $40,000,000. The weather during the summer was very dry, there was good feed on the range at the beginning of winter, and the season, up to the close of the year, was mild and comparatively free from snow except in the mountains.

Invalids.—A much larger number of invalids than usual came to New Mexico this year as a health resort, especially persons afflicted with diseases of the respiratory organs. To such an extent has this class of immigration increased that facilities for the special accommodation of such persons are being provided in various parts of the Territory. The Santa Fe Railway Company has expended $100,000 on a hotel of this kind at Albuquerque, which was opened this year.

The Sisters of Charity opened a large sanitarium at Albuquerque, with a view to giving special care to persons of this class; but this is properly a hospital rather than a hotel.

In the summer an enterprising hotel-keeper put up at Santa Fe what he called a "tent city" for the entertainment of guests of this class. An eligible site was selected near the town, and was regularly laid off in streets, but instead of houses there were rows of tents on either side, about 100 feet apart, furnished with all the necessary comforts for camping out, while a central hotel tent served meals to such as did not prefer to do their own cooking.

There are also hotels for the special accommodation of health seekers at Las Cruces, Alamagordo, Deming, Silver City, and other places in the Territory.

The greater part of the immigration to New Mexico consists of health seekers, and fully 10 per cent. of the present population is composed of persons of this class.

NEW YORK. A Middle State, one of the original thirteen, ratified the Constitution July 28, 1788; area, 47,620 square miles, excluding water surface. The population, according to each decennial census, was 1,990,598 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,908 in 1830; 2,428,921 in 1840; 3,097,394 in 1850; 3,360,726 in 1860; 4,082,595 in 1870; 5,082,871 in 1880; 7,997,853 in 1890; and 7,988,012 in 1900.

Capital, Albany.

Government.—The following were the State officers during the year: Governor, Benjamín B. Odell, Jr., Republican; Lieutenant-Governor, Timothy L. Woodruff; Secretary of State, John T. McDougal; Comptroller, Nathan L. Miller, who succeeded Erastus C. Knight, who resigned on Jan. 1 to become Mayor of Buffalo; Treasurer, John P. Jaeckel; Attorney-General, John C. Davies; State Engineer and Surveyor, Edward A. Bond; Superintendent of Public Instruction, Charles R. Skinner; Superintendent of Insurance, Francis Hendricks; Superintendent of Banking Department, Frederick K. Kilburn; Superintendent of State Prisons, Cornelius V. Collins; Superintendent of Public Works, Charles S. Boyd, who succeeded John N. Partridge, who resigned on Jan. 1 to become Police Commissioner in New York city; Commissioner of Labor Statistics, John McKee; Register of Deeds, O'Brien; Celora E. Martin; Edward T. Bartlett, Albert Haight, and Irving G. Vann, together with

UNITED STATES OF AMERICA. (NEW YORK.)
Edgar M. Cullen and William E. Werner, who are judges of the Supreme Court, sitting in the Court of Appeals.

The term of the State officers is two years. They are elected in November of even-numbered years. The Legislature meets every year in January.

**Finances.**—The State debt on Sept. 30 was $10, 075,000, and the sinking-fund $1,868,920.94, leaving the net debt, exclusive of interest (to be paid by the usual annual appropriation), $9,033,074.06. The appropriations made in 1901 for all purposes were $22,257,608.75, the lowest since 1890, a decrease of $1,600,000 over the figures of 1900. The principal receipts from indirect sources were as follow: Tax on corporations, exclusive of organization tax, $4,906,090.93; tax on transfers, $4, 084,606.87; liquor tax, $4,197,858.72. In the Corporation Tax Bureau there has been an increase in the last decade of 300 per cent. in the number of corporations taxed, and an increase of 147 per cent. in the amount collected. More than 6,000 corporations were taxed in 1901, the receipts from them having been nearly $5,000,000, and the cost of collecting them 0.6 per cent. Of the collections this year, $2,104,122.42 was received from savings-banks and trust companies under the new law. The receipts from taxable transfers were the greatest since the passage of the original act, with the exception of the preceding fiscal year, when about $250,000 more was collected. It will be remembered, however, that the year 1900 was remarkable for the large sales by one estate of nearly $2,000,000. The number of estates paying a tax in the past fiscal year was 3,059, and 368 of these were of non-resident decedents, whose estates paid a total tax of $595,594.06. The holdings of State lands in forest reserves amounted, on Oct. 1, to 1,372,000 acres. About $1,250,000 was expended for maintenance of the House of Refuge for Women, at Bedford, and the Hospital for the Care of Crippled and Deformed Children, at Tarrytown, during the first year that these institutions have come under the control of the Department of Charities and the control of the Commissioner of Charities and the control of the Commissioner of Charities.

The net tax of 1902 was the lowest in the history of the State, at $1,15 as a mill, practically a total abolition of the direct tax, for if there had not been a constitutional provision compelling the payment of the canal-debt interest out of the money raised by direct taxation there would have been sufficient money to pay that also and leave a surplus. Of this amount to be raised by the canal debt was $748,071, based on the present State valuations and taxing them at 1% as a mill.

**Valuation.**—The State assessors during the year were J. Edgar Leacyraft, George E. Priest, and Lester F. Stevens, each of whom receives a salary of $5,000. According to the report of the Board of Equalization, the tax levy for the year beginning Oct. 1, 1902, was as follows: Albany, $11,350; Allegany, $1,881; Broome, $4,206; Cattaraugus, $3,021; Cayuga, $4,205; Chautauqua, $4,095; Chemung, $3,253; Chenango, $2,362; Clinton, $1,196; Columbia, $1,355; Cortland, $1,292; Delaware, $1,833; Dutchess, $5,641; Erie, $39,244; Essex $1,275; Franklin, $1,337; Fulton, $1,889; Genesee, $2,995; Greene, $1,642; Hamilton, $376; Herkimer, $2,669; Jefferson, $4,393; Kings, $98, 613; Lewis, $1,220; Livingston, $3,316; Madison, $2,000; Monroe, $17,726; Montgomery, $3,222; Nassau, $3,554; New York, $378,138; Niagara, $10,180; Oneida, $2,337; Orange, $3,737; Ontario, $5,428; Orleans, $1,936; Oswego, $3,421; Otsego, $2,658; Putnam, $929; Queens, $13,387; Rensselaer, $9,156; Richmond, $3,814; Rockland, $1,822; St. Lawrence, $4,241; Saratoga, $3,292; Schenectady, $2,961; Schenectady, $1,398; Schuyler, $809; Seneca, $1,912; Steuben, $4,033; Suffolk, $5,063; Sullivan, $7,557; Tioga, $1,656; Tompkins, $2,946; Ulster, $3,551; Warren, $197; Washington, $3,219; Wayne, $3,258; Westchester, $19,567; Wyoming, $1,880; Yates, $1,533.

**Taxation.**—The Board of Tax Commissioners reported to the Legislature, on Jan. 20, that it is probable in the current year it may be unnecessary to prepare an equalization table, as it is anticipated that the constitutional requirements of a small exaction for canal bonded indebtedness may be satisfactorily provided for without any direct tax levy. This will permit the State Board, in its annual conferences with the local assessors, to pay more attention to equalization between tax districts and to give instruction to assessors as to local duties. In 1902 the Tax Commissioners made 3,953 separate valuations of special franchises, aggregating $298,017,770, an increase over the previous year of nearly $12,000,000. On these valuations 164 writs of certiorari were issued, against 221 writs in 1901 and 259 writs in 1900.

**Banks.**—The superintendent's report on the condition of savings-banks for the year ending June 30, 1902, shows that these institutions hold $1,051,060,186 for depositors, which is an increase of $64,967,278. The aggregate resources of the savings-banks is $1,167,682,337, and the amount of their surplus, figures on the market value of their stocks and bonds, is $151,540,560, which is less by $1,436,000 than in 1901. The decrease is believed to be due to a decrease in the estimated value of real estate, including banking houses. The surplus on the par value of stock and bonds is $92,737,000, an increase of $4,012,963. The number of open accounts increased by 99,671. The business of the banks shows a slight net loss in the ratio of growth. The total amount deposited was $290,840,359, which was an increase of $14,523,190. The amount withdrawn was $259,674,822, an increase of $16,503,185; but the net result shows a greater gain by $1,973,637. The/net bank of 830,000 has $1,139,211,409.27, an increase of $97,153,573. The total liabilities of the companies, excluding gross surplus of $159,718,603.04 and special funds of $148,283,050.71, are $1,671,692,010. The liabilities of the New York companies, as reported, are $934,947,000.42; companies of other States, $683,675,000.91. For New York companies the gross surplus (including $23,200,000 of capital) is $93,082,678.89; special funds, $1,111,488,928. The aggregate receipts of New York companies were $260,186,731.57; other States' companies, $177,745,723.40, making the gross receipts $437,535,469.07. The net excess of receipts over disbursements for 1901 was $150,754,425.1. The total premium receipts for 1900 were $316,822,293.11; for 1901, $343,186,353.11. The dividends of the year were $287,181,045.46. In 1901, 135,674,486.11 was paid for claims, $23,307,411 for lapsed and surrendered policies, $25,311,645 in dividends; $7,316,650 in dividends to stockholders, $49,970,852.49 for commissions, $1,123,385.91 for salaries and medical examiners' fees, and $27,906,665.88 for miscellaneous purposes. This classification shows that $183,3
528.88 was paid to policy-holders, while the cost of 1843-1888 was paid to 10,888 non-resident academic students.

Charities.—These are under the care of a board, consisting of votes of the charitable institutions under the supervision. According to the report, the number of beneficiaries in institutions subject to the inspection of the board on Oct. 1, 1902, was 60,904. The 14 State charitable institutions shelter 9,288 beneficiaries. The receipts of these institutions for the year ending Sept. 30, 1902, including balance on hand at the beginning of the year (60,577.72), amounted to $1,374,886.21. Their expenditures aggregated $1,265,756.01—$999,525.35 for maintenance, $244,015.86 for improvements—while $27,253.70 was returned to the State Treasurer pursuant to the provisions of the law. The private schools and institutions mainly supported by State appropriations and subject to the board's inspection care for 3,324 inmates. The receipts of these institutions for the year ending Sept. 30, 1902, were: From cash on hand, $57,057.15; from public sources, $691,216.42; from private sources, $312,254.06; total receipts, $1,069,527.63. Their expenditures aggregated $977,259.63. In the year two special inquiries were conducted. The first of these, begun in May, 1901, has recently been completed. This had reference to compliance with the public health law which relates to the better protection of the health of children in institutions. The report says improved compliance with the law may be confidently expected as the result of the inquiry. Another hotel investigation was in the matter of examining the records of long-term inmates supported at public expense in children's institutions under private control. Of the 4,107 long-term inmates it was shown that the great majority are eligible for family life, either through placing out or adoption or by restoration to parents, relatives, or friends.

Labor Statistics.—The charges of matters pertaining to labor are under the care of a commissioner, who receives a salary of $5,000. The present incumbent is J. H. Goff, who has been in the office since May 2, 1902. The number of places claiming hotel privileges has been reduced from 3,514 to 2,187. The prevalence of the hotel investigation is due to local moral authorities, who neglect or refuse to perform their duties, and therefore is not a cause for criticism of the law itself. Attention is called to the fact that persons holding liquor-tax certificates for short periods in the summer months at summer resorts, fairs, and picnics, and then surrendering them for rebates, do not pay a tax commensurate with the benefits received.

Education.—The Superintendent of Public Instruction is Charles R. Skinner, who receives a salary of $5,000, and whose term of office continues until April 6, 1904. In 1902 1,101,110 children attended public elementary schools during some portion of the year, and the number of schoolhouses and sites was 46,696,657. The secondary schools reported 91,583 pupils and a total property of $30,752,707.30. The institutions of higher learning, including professional, technical, and other special schools, reported 34,364 students, and a total net property of $82,931,757.53. In 1902 the common schools and allied interests cost $34,045,78.12 toward which the State appropriated $4,929,101.40, a decrease of $8,944.51 over 1901. The total cost of public schools and allied interests in 1902 increased over 1901 by $30,437.21, while the cost of secondary education in 1902 was $8,627,708.06, or $294,991.14 more than in 1901. The total cost of higher education in 1902 was $8,708,098.01, an increase of $1,132,433.32. In the maintenance of the University of the State of New York, the cost was increased $25,154.54. The total receipts other than appropriations were $71,847.08, as compared with $44,718.31 in 1901. Through the economies which have been practised, and through this increase of $27,128.77, the University was able to meet their most pressing needs. In 1902, excluding fees and unexpended balances, the increase in appropriations was $38,812.13. Reports from New York public high schools show that in 1901 843-1888 was paid to 10,888 non-resident academic students.
wear, 1,413; white goods, 675; artificial flowers, 870; feathers, 138; millinery, 450; hats and caps, 482; tin and ironware, 585. Of the total number of workers whose sex was stated, 27,409 were males and 42,761 females; in New York city the proportion of women was smaller—27,809, or 49.8 per cent. with the shutting down of the mines, for whereas May showed an increase in tonnage, in June there was a shrinkage from 522,980 tons in 1901, to 392,900 tons for June. There was to continue to be a falling off in coal shipments until November. There was a total decrease in six months of 460,109 tons. The settlement of the strike and the resumption of mining was directly reflected in shipments, the increase in coal shipments for November over the normal shipments of 1901 being 54,098 tons.

Railroads.—This department is cared for by three commissioners, each of whom serves five years and receives a salary of $8,000. Their annual report for 1901 shows the length of electric lines of railroad in New York State to have been increased by 117.53 miles; 34 new street-railroad companies were incorporated, with an aggregate length of proposed railroad of 539 miles, and steam-surface lines increased their mileage from 28,843.30 miles to 32,119.42. The main lines of railroad were increased from 15,664.23 to 17,518.05. The passengers carried in New York State were 123,561,749; in New York State was 123,561,749; the train mileage was 191,487,808. The percentage of operating expenses to gross earnings increased from 66.96 in 1892 to 69.52 in 1896 and back to 68.8 in 1901. The accidents to persons were 2,345, resulting in the death of 795 and 1,550 injured. Of passengers, 16 were killed and 375 injured. The Railroad Commission, in making the investigation of the conditions pertaining to the railroads, and made an examination of the collision in the Park Avenue Tunnel, that occurred on Jan. 8, by which many lives were lost and several persons injured. They reported that the New York Central Railroad was responsible for the disaster, finding that the company had been negligent, derelict, and unprogressive in failing to take measures to increase its terminal facilities at the Grand Central station. Also, the company had been negligent in failing to examine the report says that the requisitions for the products of the prisons were more numerous in 1902 than in any other year since the present industrial system was established. The volume of the output was $542,362,11, and the earnings $84,756,03. The superintendent provided employment for practically all the convicts in the prisons.

Canals.—The canals are under the charge of the Superintendent of Public Works, and the incumbent during the year was Charles S. Boyd. The failure of the Legislature to take favorable action on the canal bills left the condition of these waterways as they were a year ago. At a conference of the leaders of the dominant party in New York city in December it was agreed that the inner or Buffalo canal route should be recommended to the Legislature for 1903. It is estimated that the cost of improving the State waterways for a 9-foot 1,000-ton barge canal will be about $80,000,000. According to Superintendent Boyd's report, the opening of the canals in 1902 was earlier than in twenty years previous, and navigation was maintained until Dec. 4, largely for coal season. On the lengthened season, the total tons carried were 3,274,446, against 3,420,613 tons in 1901, a falling off of 146,167 tons. This loss is more than accounted for, as the report says, whereas there was an increase in way freight east of 84,975 tons, the total decrease in through freight was 210,219 tons, the loss being about equally divided between Eastern and Western shipments. The beginning and for good, 128. Of the number of licenses revoked for illegal manufacture was 763. In 322 instances it was necessary to attach the tag "tenant-made" to goods that were being made under conditions prescribed by the law.

Prisons.—In his annual report for the year ending Sept. 30, Cornelius V. Collins, Superintendent of Prisons, says, with reference to the State prisons in Sing Sing, Auburn, and Dannemora, the health of the convicts was excellent, mortality was low; the industries were pursued diligently and with much more favorable financial results than in the preceding year. The most distinctive change in the method of administration in the treatment of the imprisoned population was the adoption of the successful system of parole for convicts. The daily average number of men in the three prisons was 3,283, against 3,884 in 1901, an apparent decrease of 143, but counting as present the men on parole, there was an actual increase of 147. The separate figures showing the number of male convicts are: Auburn, 1,183; Clinton, 860; Sing Sing. The death-rate at Sing Sing was 0.58, at Auburn it was 0.86, at Clinton 1.60. The death-rate at Clinton is due to the fact that prisoners having consumption are transferred from other prisons to Clinton. Concerning the parole system, installed in October, 1901, the report says, of 575 initial applications for parole, 341 were granted. Of these, 48 were delinquent, 14 were returned to prison, 139 were discharged, and 154 paroles remained good at the end of the year. The results of the first year's operations of the parole law are very satisfactory, and seem to warrant the Legislature in extending the jurisdiction of the board so as to embrace all first-term prisoners now confined in the State prisons and the Eastern New York Reformatory, except the inferior life divisions, the report says that the requisitions for the products of the prisons were more numerous in 1902 than in any other year since the present industrial system was established. The volume of the output was $542,362,11, and the earnings $84,756,03. The superintendent provided employment for practically all the convicts in the prisons.
United States of America. (New York.)

On Sept. 19 there was unveiled a statue of heroic proportions on Culp's Hill, Gettysburg, to the memory of Henry W. Slocum, who commanded the right wing of the National troops in that battle. The statue was erected by the State of New York, of which Gen. Slocum was a native. The pedestal is of granite, and from base to top the monument measures 31 feet. The model was executed by Edward C. Potter. The unveiling of the statue formed the principal feature of the thirty-third reunion of the Society of the Army of the Potomac.

Louisiana Purchase Exhibition.—The Legislature authorized the appointment of a commission to take charge of the interests of the State in connection with the world's fair to be held in St. Louis in 1904, and appropriated $100,000 for its expenses. The following twelve-named persons were appointed by the Governor to serve: Edward H. Harriman, of Manhattan, President; William Berri, of Brooklyn; Edward L. Bill, of New Rochelle; James H. Callanan, of Schenectady; Cyrus E. Jones, of Jamestown; Mrs. Harriet T. Mack, of Buffalo; Frank S. McGraw, of Buffalo; Lewis Nixon, of Manhattan; Louis Stern, of Manhattan; John K. Stewart, of Amsterdam; John C. Woodbury, of Rochester; and John Young, of Ogdensburg. From Andrew Carnegie, these library payments will soon be considerably increased—in Amsterdam from $400 to $2,500, in Binghamton from $2,311 to $5,000, from $3,500 to $5,000, in Gloversville from $3,000 to $5,000, in Johnstown from $602.50 to $2,500, in Schenectady from $1,500 to $5,000, and in Yonkers from $2,000 to $5,000. When her Carnegie branches are built, will advance from $305,894.25 to $520,000. Ninety-nine library gifts are reported for this State, $124,780 in money, $715,000 for buildings, $23,350 volumes, and 2,927 prints, etc. Of the 24 gifts, amounting in value to $677,100, were from Andrew Carnegie.

Stony Point Park.—On June 16, with appropriate ceremonies, occurred the dedication of the Stony Point battlefield as a State reservation. This battle-field was purchased by the Legislature in 1897, and was placed in the custody of the American Scenic and Historic Preservation Society. The State has been supplemented later by a large grant of money, which was placed at the disposal of the society, to be expended under its supervision for improvement of the battlefield. The exercises included a parade, which was reviewed by Gov. Odell; then the flag that first floated on July 4, 1900, from the top of the Eiffel Tower during the Paris Exposition was unfurled. Speeches were delivered, and there were present the West Point Cadets, with their bands, a detachment of cavalry, a section of artillery, details from local organizations, and the National Guard.

Memorials.—On Sept. 1 there was erected in Watertown a memorial statue bearing the following inscription: "To Roswell Pettibone Flower, Born Aug. 7, 1836; died May 12, 1899; Representative in the Forty-seventh and Fifty-first Congresses, Governor of the State of New York, MDCCCLXXV. A granite slab leading from the entrance to the base of the pedestal contains the additional inscription: "Erected in Affectionate and Grateful Remembrance of His Noble Manhood, His Distinguished Public Service, and His Loyal Heart. " The statue was designed by Augustus St. Gaudens, and cost $25,-000, which amount was raised by popular subscription. The granite pedestal was the gift of the late Mrs. Emma Keep-Schey, of New York.

On Sept. 19 there was unveiled a statue of heroic proportions on Culp's Hill, Gettysburg, to the memory of Henry W. Slocum, who commanded the right wing of the National troops in that battle. The statue was erected by the State of New York, of which Gen. Slocum was a native. The pedestal is of granite, and from base to top the monument measures 31 feet. The model was executed by Edward C. Potter. The unveiling of the statue formed the principal feature of the thirty-third reunion of the Society of the Army of the Potomac.
the city ship-canal, and Peck Slip, and lodging with the Common Council the power to determine the extent of such improvement.

Authorizing an appropriation for the New York Zoological Society for the support of the New York Aquarium.

Reappropriating $550,000 for the Sixty-Fifth Regiment Armory at Buffalo.

Incorporating the Buffalo Zoological Garden.

Incorporating the city of Plattsburg.

Appropriating $21,050 for enlarging the Forty-seventh Regiment Armory.

Authorizing the selection of Ausable Chasm as a part of the Adirondack State Park.

Providing for the appointment of a commission of three to examine wild and forest lands in Suffolk County, with a view of locating thereon a public park.

Appropriating $500 for a survey of a proposed canal between Hempstead Bar and Jamaica Bay, Long Island.

Consolidating the Chautauqua Assembly, Chautauqua University, and the Chautauqua School of Theology under the title of the Chautauqua Institution.

Amending the university law relative to the establishment of public and free libraries.

Providing that clinical students admitted to preliminary State medical examination must be nineteen years of age.

Providing for a new apportionment of the State school money, so that each city shall receive $800; each village of a population of 5,000 employing a superintendent of schools, $800; and each union school district with a population of 5,000 employing a superintendent of schools, $800.

Placing the Knights of Columbus among the organizations recognized by the insurance laws.

Appropriating $16,000 for a State monument on the Vicksburg battle-field.

Appropriating $50,000 for the promotion of sugar-beet culture.

Providing for the appointment of 12 additional fish and game protectors.

Prohibiting the taking of shell-fish in the waters of the State by persons who have not been actual residents for at least six months.

Exempting from the charge of tax the black and gray squirrels in Rensselaer County fifteen days, from Aug. 31 to Sept. 15.

Providing that the laws prohibiting the possession of arms during certain seasons in this State shall apply to game taken outside of this State.

Permitting the use of other than brass baggage-checks by railroad corporations.

Providing that garbage crematories shall be operated with fuel that will dispose of the noxious gases arising from the consumption of garbage.

Making it a violation of law to throw rubbish on highways.

Prohibiting the sale of oleomargarine.

Providing for the management of the 14 State charitable institutions by the appointment of a fiscal supervisor, who shall receive $6,000 per annum, and who shall be the purchasing and fiscal agent for all the charitable institutions.

Authorizing the State Superintendent of Prisons to expend $3,000 a year in the maintenance of the bureau for the identification of criminals.

Imposing a penalty of not more than ten years' imprisonment or a fine of not less than $5,000, or both, on persons who advocate anarchistic doctrines by speech, writing, or otherwise; also making it a misdemeanor, punishable by a fine not exceeding $50, and each subsequent offense punishable by imprisonment or a fine, or both.

Defining the rights of minority stockholders in case of consolidation of corporations.

Providing for the appointment of a commissioner of juries in Kings County by the two county judges, who are Republican, and the two county judges of the Democratic party in Kings County. The commissioner is to serve five years at a salary of $6,000.

Providing that the State Racing Commission shall pass upon the certificates of incorporation of all racing associations which intend to conduct running races.

The Governor authorized the appointment of a commission to inquire into the delays and expenses in the administration of justices in the counties of New York and Kings in the First and Second Judicial Districts, and to suggest legislation thereon, the commission to consist of seven persons and to make a final report to the Governor for transmission to the Legislature on or before Dec. 31, 1902, and submit such bills or bills as it may deem necessary to carry its recommendations into effect.

Political.—The Republican State Convention was held in Saratoga Springs on Sept. 23-24, which was the 50th, and adopted the platform and nominated for State Chairman George W. Dunn, who nominated Lemuel E. Quigg as temporary chairman, while for permanent chairman Timothy E. Ellsworth was chosen. The platform said concerning roads and canals: The canals provide a channel for comm.
The election took place on Nov. 4, when the Republican candidates for Governor, Lieutenant-Governor, Secretary of State, Comptroller, Treasurer, and State Engineer and Surveyor were chosen by pluralities of 9,465 and 14,621. Fifty-seven Representatives to Congress were elected, of whom 20 were Republicans. Of the 17 Democrats chosen, 16 were from New York city and 1 from Buffalo. A new Legislature was then elected, consisting of 28 Republicans and 22 Democrats, and in the Assembly 80 Republicans and 61 Democrats, a gain of 7 Democrats in the Senate and 26 Democrats in the Assembly.

**NOTICE OF THE ELECTIONS.**

**GOVERNMENT.—**The following were the State officers in 1902: Governor, Charles B. Aycock; Lieutenant-Governor, W. W. Turner; Secretary of State, J. R. Grimis; Treasurer, R. R. Lacey; Auditor, B. F. Dixon; Attorney-General, R. D. Gilmer; Superintendent of Education, T. F. Toon, who died in February and was succeeded by James W. H. Green; Commissioner of Agriculture, S. L. Patterson; Commissioner of Insurance, James R. Young; Adjutant-General, B. S. Rosyter—all Democrats; Geologist, Joseph A. Holmes; Librarian, M. Q. Sherrill; Commissioner of Labor and Printing, H. B. Varner; Chemist, B. W. Kilgore; Corporation Commission, Franklin McNeill, Samuel L. Rogers, D. E. Abbott; Chief Justice of the Supreme Court, David M. Furches, Republican; Associate Justices, Robert M. Douglas, Republican, Walter Clark, Democrat, W. A. Montgomery, Democrat, Alexander A. Cook; Clerk, James T. Kenan, Democrat.

The State officers are elected for terms of four years, at the time of the presidential elections. The Legislature meets biennially in January of the odd-numbered years, but its sessions are not limited, but legislators are not paid for more than sixty days.

**FINANCE.**—The fiscal year ending Nov. 30 began with a balance from the previous year of $18,282.52. From Dec. 1, 1901, to Nov. 30, 1902, there was received into the Treasurer's office $1,907,838.48. This includes the $200,000 loaned by the Park National Bank, of New York city. The disbursements in the fiscal year amounted to $1,863,847.79, leaving a balance in the treasury on Dec. 1, 1902, of $62,571.41. Outstanding warrants brought the actual balance down to $390,000.

Among the larger items of expenditure in 1902 were: For interest on bonds, $239,999; State hospitals, $217,850; public schools, $180,604; Agricultural Department, $66,145; Judicial Department, $69,539; deaf-mute and blind institutions, $115,911; pensions, $20,004.50; Soldiers' Home, $12,000; university, $57,600; Normal College, $35,000; orphan asylum, $15,000; experiment station, $15,000; Agricultural College, $64,511; Colored Agricultural College, Greensboro, $23,550; normal schools, $20,250; Corporation Commission, $12,400; printing, $20,268; Shell-Fish Commission, $18,713.

**VALUATIONS AND TAXES.**—From the figures given out by the Corporation Tax Commission in
December it is learned that the value of real estate was fixed in 1901 for taxation at $175,366.240, and of personal property at $108,078,569, giving a total of $283,441,600. On this the tax at 21 cents on the $100 was $596,227.70.

Other valuations were: Railroad companies, $42,448,799; telephone companies, $355,357.22; steamboats, canals, ferries, $220,471.53; street-railways, $760,300; electric light and gas companies, $93,623.46; telegraph companies, $900,200; sleeping-car companies, $181,720; express companies, $189,573.69; water companies, $84,429; corporate excess, $4,897,442; building and loan stock, $560,521; bank stock, $6,147,703; total, including the above, $341,222,006, and the total tax, $716,566.21.

The pension tax amounted to $136,488.80, and the tax on 267,857 polls to $32,192.44. Income and license and other taxes brought the total for the State to $1,169,024.53. The school taxes, payable to county treasurers, amounted to $1,192,219.03; the county taxes, to $283,258.20; municipal tax, to $11,049.26; street and bridge tax, to $1,126,902.58; total of all taxes, $5,651,400.69.

The School debt amounts to, $6,627,770. The bonded debts of the counties amount to $1,196,811.31, and their floating debt $201,222; the bonded debt of the towns was $4,091,669, and current liabilities, $274,818.51.

Education.—The number of illiterates in the State, according to the last census, was 385,251. In the percentage of children from ten to fourteen able to read and write, the State stands forty-third in the list, with 75.25 per cent.

Another conference was held at Raleigh in April for the purpose of devising means for improving the public schools and awakening greater interest in education throughout the State. The superintendent named as the 5 greatest needs, improvement of the schoolhouses; consolidation of school districts; increase of the public-school fund by local taxation. About 57 per cent. of the school districts in North Carolina have a school population of fewer than 65 children, the minimum number prescribed by law. The work of consolidation of districts has been begun; in December the number had been reduced from 8,115 to 7,853. It was decided at a conference to hold educational rallies in all sections of the State, to have at these rallies inspiring educational addresses, and to have in attendance, in addition to the general public and all friends of education, the county superintendents of the 15 or 20 surrounding counties, and to conduct an institute and some of these superintendents.

A comparison of the number of teachers at the beginning and at the end of the last decade shows that there was a movement toward the employment of more women as teachers in proportion to the number of men. In 1900 there were 2,639 white male teachers and 1,883 white female teachers. Of colored teachers there were male 1,311, and female 910. In 1900 there were only 2,426 white male teachers and 2,591 white female teachers. The colored male teachers numbered 1,131 and the colored female teachers 1,276. The average monthly salary was given as $28.18 for men and $23.14 for women. The receipts of the school fund for the year ending June 30, 1902, were $1,311,301, and the disbursements $1,276,036.

The State Normal and Industrial College, at Greensboro, was visited by the committee in May. The receipts from Oct. 1, 1900, to Sept. 15, 1902, were $174,015.02, and the disbursements $173,983.88.

The Board of Examiners of State Institutions found the Normal Schools for Colored Teachers, at Plymouth, Goldsboro, and Franklinton very unsatisfactory, and censured the directors for neglect. Similar criticisms were made upon the Colored Agricultural and Mechanical College. The examiners said:

"We next note that since the exclusion of girls the number of boys enrolled as students has somewhat increased, until now it is said to be as many as 95. We have tried to learn the actual average attendance, but have not been able to do so because no books have been kept. We have heard reports that it was as low as 40 and as high as 90.

The Executive Committee of the college praises its work, saying: "We believe that the college is offering the kind of education best suited to the colored people, and is doing a great work for them and for the State. It is not true that no books are kept at the college from which the attendance can be learned. There are now [November, 1902] in actual attendance 114 students, an enrollment of 121, which is growing almost daily. Every room in the college, including those formerly occupied by the girls, is full, none having only 2, and none having more than 2 in a room."

The regular appropriations are as follows:

United States appropriation, $3,200; North Carolina appropriation, $7,500. In addition to this, the last Legislature appropriated $4,000 to be used for 2 years to help pay for the farm and help pay debts.

There were 369 students at the Agricultural College, at Raleigh, in May, and 450 in November. The oldest student was 22 years of age, the youngest 15. Nearly $4,000 was earned by students in the year; the largest amount was $163.95 and the smallest 15 cents, the average being $16.35.

The State University had an enrollment in 1901-'02 of 666, the largest in its history. It has been decided to establish in Raleigh a college of medicine in connection with the University; consolidation of school districts; increase of the public-school fund by local taxation.

By the oral methods 1,000 students and an enrollment of 214, of whom 24 are Negro, are attending college.

The Joseph K. Brick Agricultural, Industrial, and Normal School, to which Mrs. Julia Brick, of Brooklyn, N. Y., has given $500,000, is on a farm between Whiteakers and Enderfield, near the Atlantic and Coast Line. The Brick school is located in the heart of the largest negro population in the State. This is the only large sum of money given for negro education that has come to any institution except those at Hampton and Tuskegee.

There are published in the State 292 newspapers. Only 28 are daily; 22 are weekly; 174 are weekly; and 44 monthly. In politics 142 are Democratic, and 17 Republican; many of the weeklies are religious, and some are technical.

Charities and Corrections.—Raleigh has 13,650 residents, and 42 hospitals and almshouses. Of these white deaf children is located at Morganton, and one for the colored at Raleigh. In the school at Morganton are 221 pupils. The number taught by the orphans and orphans is steadily increasing. The yearly per capita is $174.67.

The board finds that while there are about 900 insane persons in the eastern district, there are only 404 patients in the western district, and that the others are either in the jails, in the county houses, or in charge of their relatives. The cost of maintenance is $1,113.12 a month.

The number of white blind children in the Raleigh institution is 150; of colored deaf and dumb and blind, 173. The annual per capita is $175.12.

There must be in the western district about 1,548 insane persons. But there are only 796 in the Morganton hospital. There are on file 400 applications for admission, not one of which has been granted for lack of room. The annual cost per capita is $32.25.

The hospital for insane negroes, at Goldsboro, has 470 patients. The cost per capita is $9.16 a month.
UNITED STATES OF AMERICA. (NORTH CAROLINA.) 779

There are 41 patients in the hospital for the dangerous insane, which is in the State Prison building. The cost per capita is $114.98 a year. In April there were 733 women, of whom 5 are white; 198 of the men are white, and 3 are Indians.

The net profit of the present administration has been $20,643.28. In 1901 the prison failed of being self-supporting by the sum of $32,773.

From July 1, 1901, to July 1, 1902, the number of criminal cases in the courts was 9,301—males 8,634, females 667—against whites 4,951, against negroes 4,339, against Indians 11. Convictions and dismissals 4,616, acquittals 1,183, nolle prossed 1,594, otherwise disposed of 106.

Railroads.—The Corporation Commission this year reduced the passenger-fare rate over the Atlantic Coast Line Railroad, the Seaboard Air Line Railroad, and the Southern Railway. The commissioners' standard rate of 21 cents a mile for second-class fare and 31 cents a mile for first-class fare is now applied, in fact, to nearly every road in the State.

There are 3,681.95 miles of railroad in the State, an increase of 30.82 miles over last year. There were 62,045 miles of new road built, but 35.81 miles were abandoned.

The aggregate earnings of the railroads were $18,476,173.56; the operating expenses, $10,187,100.75; net profit, $8,289,073; bonded debts, $52,982,390; capital stock, $77,877,115; taxes paid, $547,282; number of employees, 11,401; amount of wages, $4,492,590; accidents, 87 killed, 1,105 injured.

The gross earnings of the street-railways were $531,019; operating expenses, $408,338; number of passengers carried, 5,741,044.

The Supreme Court decided that the law passed by the last Legislature should not be construed to mean that the franchises were to be taxed separately from the tangible property.

Banks.—In 1899, when the banks were placed under the supervision of the Corporation Commission, there were 62 in the State. There are now 190—83 State, 23 private, and 14 savings. In 1902 the capital stock was $3,613,564; deposits, $14,046,775; gold, silver, and national-bank notes on hand, $1,188,810; total resources, $20,759,588.

Building and Loan Associations.—There are 26 building and loan associations, with assets amounting to $2,020,676.

Insurance.—In the year ending Dec. 31, 1900, the total of premiums received by North Carolina companies was $298,021.03, and the amount of losses paid $52,817.98. For companies of other States doing business in North Carolina, the premiums received were $765,082.48, and the losses paid were $590,386.95. Premiums received by foreign companies doing business in the State amounted to $369,162.16, and the losses paid were $176,137.95.

Industries and Products.—Following are census statistics on farms in the State: Number, 224,637; value, $194,655,929. Of the valuation 27 per cent. was in buildings and the remainder in land and other improvements than buildings. The tobacco-crop of 1899 was 127,600,400 pounds, valued at $8,038,691.

The cotton-crop of 1901—92 was 550,000. The estimate for 1902—93 was 650,000. In 1899 the rice showed the largest yield of sweet potatoes in the history of the State. From 68,730 acres the product was 5,781,587 bushels, valued at $2,119,956.

The wooded area of the State is 35,300 square miles.

The textile mills of the State show an increase for the year 1901. The number of mills enumerated is as follows: Cotton-mills, 226; woollen-mills, 11; knitting-mills, 41; carpet-mills, 11; jute-bagging mill, 1; silk-mills, 3; total, 283.

In 1900 the number of spindles in use was 1,491,771; it is now 1,864,165.

In the knitting-mills there are in use 3,814 machines, against 2,048 in 1900. The hours of labor for the operatives run from ten in the knitting-mills up to twelve and a half in the cotton-mills.

The number of operatives employed is as follows: 18,171 men, an increase of 21 per cent. over 1900; 18,377 women, an increase of 15 per cent.; 7,996 children under fourteen, an increase of 5 per cent.

In flour and gist mills $2,905,310 was invested in 1900, and the product was valued at $8,967.402.

The value of gold produced in 1901 was approximately, $55,500, and of silver $12,180. The preliminary estimate for 1902 gives the gold value as $91,713, and the silver as $11,418. The agent in charge of precious stones says that in 1901 the deposit of rhodonite garnet in the Cowee valley, Macon County, was worked extensively. Mining for dark blue, green, and yellow beryls, for amethysts, and for emerald matrix was carried on in the State.

Highways.—A good-roads congress was held in Raleigh in February, and a State association was formed. Among the resolutions passed were one advocating greater use of convict labor on roads, one favorable instruction in road-building at the State colleges, and one asking for the creation of the office of highway commissioner, with an appropriation for supervision.

The State Fair.—The first State fair of North Carolina was held in 1858; the fiftieth anniversary this year was marked by an unusually fine exposition.

Historic.—A celebration was held on Guilford battle-ground, July 4, when a monument to Nathaniel Macon was unveiled and an oration on his character and services was delivered by the Hon. T. S. Pittman.

Elaborate preparations are making for celebrating, on Roanoke Island, the three-hundredth anniversary of Sir Walter Raleigh's colonies and the birth of Virginia Dare (in August, 1887), the first Anglo-American.

Federal Appointment.—Considerable excitement has been raised over the question of the appointment of Sam Vick, a colored man, postmaster at Wilson. The people of the town testify freely to his good character and capacity, and place their opposition frankly on the ground of his color. It is said there is not a white Republican in the town.

Lawlessness.—Reports have been published of the lynching of 4 negroes, 1 for criminal assault and 3 for murder. The negro lynched at Washington in March had poisoned the whole family of Dr. D. T. Taylor, none of whom died. The Governor offered $400 reward for the arrest and conviction of each member of the mob that lynched 2 negro brothers at Salisbury in June; they were believed to have murdered a young lady who had ordered them off her premises, though there seems to have been some room for doubt of the guilt of the younger, who was but fourteen years old. In the case of the negro lynched for criminal assault at or near Kinston, the coroner's jury found that he came to his death at the hands of parties unknown to the jury, and added: "In view of the enormity of the crime committed by said Tom Jones, alias Frank Hill,
we think they would have been recreant to their duty as good citizens had they acted otherwise."

**Legal Opinion**—The justices of the Supreme Court contend that their salaries are not liable to taxation on the ground that the Constitution declares that their salaries are not to be diminished during their term of office, and the Attorney-General, in a written opinion, which applies to the salaries of other State officers as well.

The decision against the antitrust law of Illinois probably invalidates that of this State as well.

**Political.**—At the State election, in November, a Chief Justice and 2 Associate Justices of the Supreme Court were to be chosen, for terms of eight years, succeeding Judges Puche, Clark, and Cook, and a member of the Corporation Commission to succeed D. H. Abbott, for a term of six years; also a Superintendent of Public Instruction.

The Democratic Convention, in Greensboro, July 16, nominated Walter Clark for Chief Justice and Henry G. Connor and Platt D. Walker for Associate Justices. Eugene C. Bellingfield was named for Corporation. Judge James Y. Joyner for Superintendent. The platform declared allegiance to the national platform of the party; congratulated the people upon the adoption of the suffrage amendment; commended the State administration; denounced the policy of "imperialism"; condemned trusts and Congress for not restraining them; favored the establishment of the Appalachian park; and favored nominations by primaries.

After approving the national administration and affirming allegiance to the party principles, the platform accused the Democrats of violating their pledged pledges in regard to reductions in expenses, number of offices, and salaries, and said further:

"They promised, by affidavit and otherwise, that no white man would be disfranchised under the amendment to our Constitution, but instead of observing their pledge with respect to this matter the Democratic State chairman is now forced to admit that 18,000 white men will be denied the right to vote at the approaching election."

"We will oppose the unconstitutional and warrantied effort to impeach 2 of our Supreme Court justices for purely partisan purposes, for following precedents established by the Supreme Court of this State in a long line of decisions covering a period of more than sixty years."

"We further condemn them for the enactment of legislation appropriating the money of the people for the purpose of defraying the expenses of persons indicted for violation of laws which they had sworn to obey, and for granting amnesty to such persons from prosecution in the State courts."

The convention was composed entirely of white men; contesting delegations of negroes were not seated in any instance.

Negro Republicans held a convention in October; they made no nominations, but adopted a set of resolutions condemning the treatment accorded them.

All the Democratic candidates for State offices were elected. For Chief Justice, Clark, Democrat, had 132,230 votes, and Hill, Republican, 71,275. All the 10 representatives in Congress are Democrats. The Legislature stands on joint ballot 144 Democrats, 22 Republicans, and 4 Independent Democrats. There was a tie in the Thirty-fourth Senatorial District, each candidate having 3,816 votes.

**North Dakota,** a Northwestern State, admitted to the Union Nov. 2, 1889; area, 70,735 square miles. The population was 192,719 in 1890 and 318,148 in 1900. Capital, Bismarck. Governments. The following were the State officers in 1902: Governor, Frank White; Lieutenant-Governor, David Bartlett; Secretary of State, E. F. Porter; State Auditor, N. Carroll; State Treasurer, D. H. McMillan; Commissioner of Insurance, Ferdinand Leutz; Attorney-General, O. D. Comstock; Superintendent of Public Instruction, J. M. Devine; Commissioner of Agriculture and Labor, R. J. Turner; Commissioners of Railroads, C. D. Lord, J. F. Shea, J. J. Youngblood; secretary, C. C. Hammond; State Land Commissioner, E. J. Laxdal; Adjutant General, E. S. Miller; Geologist, Frank A. Wil¬
der; Oil Inspector, L. W. Schruth; Superintendent of Public Health, H. H. Healey; State Examiner, R. E. Wallace; Veterinarian, J. W. Dun¬
ham; Chief Justice, James Y. Joyner; Associate Justice, W. Wallin; Associate Justices, N. C. Young, D. E. Morgan. All are Republicans.

The State officers are elected for terms of years in November of every even-numbered year. The Legislature meets biennially in January of the odd-numbered years. The length of the session is limited to sixty days.

**Finances.**—The Governor says in his message:

"I desire particularly to draw your attention to the improved condition of our State treasury and the reduction made in our State debt. On Jan. 1, 1901, there were less than $10,000 in the general fund. The accounts against the State were six months past due, upon the Auditor's table were $80,000 of funding warrants issued to pay current expenses, and more than $150,000 of vouchers awaiting payment. It had been a common practice for the Legislature each two years to authorize the issuing of short-time warrants to square accounts. These warrants drew a high rate of interest, were not considered good by investors, and were often only sold upon the personal assurance of the officers issuing them that they would be paid. During the last two years $270,000 of these warrants were issued. All these warrants have been gradually paid off. All other obligations of the State have been promptly met. We have practically all bills paid and with a small balance in the general fund. During the same time, by a special tax, $153,000 of asylum bonds have been paid off and the bonded debt reduced to that extent. This has been accomplished principally by reason of increased revenues. Our assessed valuation and tax levy for general purposes have grown very materially."

**Valuations.**—The valuation of all property in the State for purposes of taxation is $128,380,414: The valuation in 1901 was $124,592,521. The principal increase in valuation is in real property, which as equalized this year was more than $7,000,000 above the value in 1901. The value of real property is $83,105,926. In 1901 the total was $77,384,924. Reduction of the assessed valuation of live stock kept down the total of personal property. Railroad property is valued at $18,970,000. Telegraph property is equalized at $219,465, telegraph property at $1,253,845, and express companies at $143,665.

The rate of the general State tax is 4 mills: that of the bond interest tax, $1 per $100.
collections of taxes in the two years amounted to $395,654.46 for general purposes.

Education.—The number of illiterates in the State in 1901 was 97,000, or 6 per cent. of the population. In 1901 were: Wheat, 55,000,000 bushels; oats, 20,000,000; flax, 25,000,000; corn, 2,000,000. North Dakota is the leading State in the production of flax.

Tests of lignite for use on railroads, which were made this year, are reported to have proved that with engines constructed for the consumption of lignite this fuel is available for use on the road at a great saving over the fuel now used. The principal objection in the past, when tests of lignite have been made in railroad locomotives, has been that the draft has lifted the fire out of the fire-box and carried the live coals through the flues and out of the stack, rendering it difficult to keep a fire. This has been overcome in the construction of the engine with which the recent test was made. This engine has a brick arch over the fire-box, which prevents the lifting of the fire, which passes around the end of the arch, and then through the flues, keeping a steady and hot flame. All gases from the coal rise to the top of the arch, where they are consumed.

Lands.—In North Dakota there are 15,071,477 acres of unappropriated lands, of which 10,121,977 acres are surveyed and 4,949,490 acres are surveyed but not surveyed. The reserved area embraces 8,325,450 acres, and the appropriated lands 26,513,113.

The lumbered area is estimated at 600 square miles. In 1901 the lumber and wood products sold lands that brought in cash payments of $282,000 and represented a total cash value of nearly $1,300,000. The common-school fund received about $200,000 in 1901.

The State institutions received $79,239, placed to the credit of their permanent funds, as follows: Agricultural College, $16,160.23; Blind Asylum, $4,622.18; Capitol building, $8,813.09; School for the Deaf, $6,144.98; Insane Hospital, $2,496.12; Industrial School, $4,935.96; Valley City Normal School, $4,852.62; Mayville Normal School, $2,817.62; Reform School, $5,083.78; Scientific School, $2,461.56; School of Mines, $3,642.16; Soldiers' Home, $4,856.90; university, $11,063.07.

Fort Lincoln.—This military post near Bismarck has been in service more than two years, but it is far from complete; when finished it will comprise 62 buildings. Only 3 are finished. These are the officers' quarters, the barracks, and the engine-house and water-works. All the buildings are of brick.

Grand Forks.—This city is to have a Carnegie library as soon as the subscription list for the lot, furnishings, etc., which is now nearly complete, is finished.

Insurance.—The life-insurance claims paid in the State in 1901 amounted to $200,661.

Industries and Products.—From statistics given by the Commissioner of Agriculture for 1901, and a review of the progress of the State, the following: Number of flouring-mills, 70; lignite-coal mines, 33; cheese factories, 8; creameries, 20; Treasurer, D. H. Ranlet; 3,180; combined farms and ranches, 2,150; tons tame and wild feed made, 926,005; acreage lost by hail, 1900, from one-fourth to total, 512,482; estimate of flax per acre, 10.15 bushels; estimate of wheat per acre, 12.25 bushels. The returns show a most remarkable increase in such grains as corn, barley, and rye, and the garden produce was nearly doubled in 1901 over 1900.
The Democratic nominations, made at Fargo Aug. 1, were: For Governor, Joseph E. Cronan; Lieutenant-Governor, Samuel K. McGinnis; Secretary of State, John A. Loudermilk; Auditor, John F. Morrison; Treasurer, James McDonald; Attorney-General, Michael J. Barrett; Superintendent of Instructi, Vilhjalmar Stevenson; Commissioner of Instruction, Frank A. Wilson; Commissioner of Agriculture, Oscar H. Will; Railroad Commissioners, Peter L. Pritchard, Charles P. Peterson, Oliver Knudson.

For Justice of Supreme Court, the Republican candidate, John M. Cochrane, was adopted.

The platform declared strongly against the so-called railroad merger, pledged a resubmission of the prohibition law, favored initiative and referendum, demanded the repeal of the follow-servant law, and called for the equal taxation of corporations.

The prohibitionists met in small number at Hillesboro Aug. 6 and nominated J. G. Giverson for Governor and Charles H. Mott for Lieutenant-Governor; but the names were not on the ballot.

Representatives of the Socialists met at Fargo in Aug., and nominated John D. McIntosh for State ticket: For Governor, Robert Grant; Lieutenant-Governor, Ralph W. Simpkins; Secretary of State, William Lamb; Auditor, L. F. Munter; Treasurer, William Olson; Superintendent of Public Instruction, William Ballou; Commissioner of Insurance, P. T. Sande; Commissioner of Agriculture and Labor, L. F. Dow; Railroad Commissioners, W. J. Bailey, Soren Madson, S. E. Haight.

The election resulted in the success of the entire Republican State and congressional ticket. For Governor the vote stood: Republican, 31,613; Cronan, Democrat, 17,576; Grant, Socialist, 1,265.

The Legislature will have 117 Republicans and 23 Democrats. For State Superintendent of Public Instruction there were cast about 4,000 more votes than for the other State officers, indicating that number of women's votes. If the vote of women in the State is comparatively the same as the male vote, only about one woman in twelve voted.

BEIGI, a Central Western State, admitted to the Union in 1883; area, according to the Geological Survey, 41,060 square miles, of which 300 are water surface. The population, according to each decennial census since its admission, was 29,492 in 1860; 182,019 in 1870; 367,024 in 1880; 1,191,417 in 1890; 1,980,329 in 1890; 2,339,311 in 1890; 2,685,209 in 1870; 3,198,082 in 1880; 3,672,316 in 1890; and 4,157,224 in 1900. It ranks fourth among the States in point of population.

Government.—The State officers during 1902 were: Governor, George K. Nash; Lieutenant-Governor, C. L. Nipper, and H. L. Gordon, vice Nipper, resigned; Secretary of State, L. C. Laylin; Treasurer, J. B. Cameron; Attorney-General, J. M. Sheets: Judges of Supreme Court, J. E. Burket, J. A. Shumack, J. L. Price, W. T. Spear, William Z. Davis, William B. Crew (appointed July 19 to fill vacancy caused by death of Marshall J. Williams, July 9); Clerk of Supreme Court, L. E. Emerson; Commissioner of Common Schools, Lewis D. Bonebrake; Dairy and Food Commissioner, Joseph E. Blackburn; Board of Public Works, Frank A. Huffman, Charles A. Goddard, William G. Johnston. All the State officers were Republican.

The term of the Governor, Lieutenant-Governor, Treasurer of State, and Attorney-General is two years, beginning in January of the even-numbered years; of the Secretary of State, two years, beginning in January of the odd-numbered years; of the Dairy and Food Commissioner, two years, beginning in February; of members of the Board of Public Works and Clerk of the Supreme Court, three years, beginning in February; of the Commissioner of Common Schools, three years, beginning in July; of the Auditor of State, four years, beginning in January of even-numbered years; of Judges of the Supreme Court, six years, beginning in February. All are prohibited from re-election in November. The Legislatures meet annually in January of the even-numbered years, there is no limit to the length of the session.

Finance.—The balance in the treasuries to the credit of the general revenue fund at the beginning of the fiscal year, Nov. 10, 1901, was $2,226,664.46; total receipts of general revenue fund during fiscal year, $9,206,170.91; amount paid for fund during year, $5,229,098.42; total receipts of sinking-fund during year, including balance from previous year, $804,781.72; total disbursements from sinking-fund, $550,219.49; receipts of State common-school fund, $2,117,735.80; balance from previous year, fund, $121,921,945.10; balances from State common-school fund, $1,829,924; receipts to credit of university fund from taxes, $747,720.47; aggregate payment to universities during fiscal year, $322,326.52; payments for support of other State institutions, $5,148,571.91; total assessed value of real property in State, $1,186,180,471; total assessed value of personal property, $804,704,917; debt of State, bonded and other, $200,000; unredeemable debt (school fund), $4,729,936; aggregate debt of counties, municipalities, and school districts, $106,936,137.

Militia.—At the close of the fiscal year, Nov. 15, the total strength of the Ohio National Guard was 5,008, of which 26 were staff-officers, 5,087 in 2 brigades of infantry, 310 in naval brigade, 143 medical department and signal corps, 229 artillery; 110 cavalry.

Railroads.—The report of the Commissioner of Railroads shows that in all classes of railroad business it was the greatest year in Ohio's history. At the end of the fiscal year, Nov. 15, the length of main line was 9,059 miles. With new second, third, and fourth, tracks, the increase over the preceding year was 361 miles. The original cost of capital stock was $10,644,368.26. The total increase in capital stock per mile was $564. Cost of equipment on lines operated in Ohio increased by $14,730,259, or 8.7 per cent. on the lines operated within the State. Total earnings for the entire lines was $240,407,738.14, an increase of $20,183,927.54 or 9.17 per cent. Total earnings in Ohio from all sources, $101,001,341.37, an increase of $11,302,063.62, or 12.6 per cent. The percentage of earnings in Ohio to entire earnings is 42.42 per cent. There was an increase of $7,581,567.53, or 12.39 per cent., in operating expenses on the entire lines, and $3,711.21 or 13.01 per cent., in that part of the line running through Ohio. Total number of passengers carried in Ohio, 1902, 128,499, or an increase of 1,998,021, or 7.50 per cent. Number of tons of freight transported, 1902, 132,113,785, an increase of 14,485,124 tons, or 12.31 per cent. Average receipts per ton, 35.45 cents, an increase of 1 cent. Freight earnings per mile, $6.990.13, an increase of $1,018.83, or 17.06 per cent. The total number of persons injured in 1902 was 3,092, an increase of 1.13 per cent. Of the 52 operating corporations within Ohio, 21 paid dividends.

Legislative Session.—The General Assembly was opened on Monday, Jan. 6, and closed on the 31st of January.
regular session Monday, May 12. The Republican
ans had a majority of 9 in the Senate and 14 in
the House. Several important laws affecting tax-
ation and corporations were passed. Among them
are these:

Requiring domestic and foreign corporations
other than quasi-public corporations to file an-
ual reports and pay annual fees of one-tenth of
1 per cent. on invested capital stock.

An amendment to the law relating to electric-
light, gas, natural gas, express, telephone, tele-
graph messenger, railroad, pipe-line, waterworks,
street, suburban, and interurban railroads and
other corporations increases their annual tax
from $4 to 1 per cent. of the gross receipts for
the business done in Ohio in the year next preceding
the 1st day of May.

An addition to the Dow tax law providing for
a stricter enforcement of the tax on the sale of
liquors.

Providing that an action upon the liability
of stockholders of corporations can only be brought
within eighteen months after the date the obliga-
tion shall become enforceable against said stock-
holders.

Giving the Governor and the Secretary of State
the power to remit penalties against foreign cor-
porations for failure to comply with the corpora-
tion laws where good cause is shown for such fail-
ure or neglect; also providing that where two-
thirds of the property or business of the foreign
corporation is invested in Ohio, and the corpora-
tion pays one-tenth of 1 per cent. upon its au-

torized capital stock, the shares of stock of such

corporation held in Ohio need not be returned for
taxes.

Providing that a corporation may purchase or
otherwise acquire and hold shares of stock in kin-
dred, but not competing corporations, whether
domestic or foreign.

Requiring owners of bank stock outside of Ohio
to list their stock for taxation in Ohio.

Among the enactments of other character the
most important are the following:

Providing that the action of a political party
convention on a proposed amendment to the State
Constitution may be expressed by affirmative or
negative expression printed with the party ticket
on the official ballot.

Establishing State normal schools at Ohio and
Miami Universities.

Naming schools and colleges.

Authorizing an Ohio commission and building
at the St. Louis fair and appropriating $75,000.

Restricting the State for congressional elec-
tions.

Making burglary of an uninhabited house a
crime punishable by imprisonment for life.

Perfecting the child-labor law and fixing the
age at fourteen years.

Providing stringent punishment for assault on
a President, Vice-President, Cabinet officer, gov-
ernor, or lieutenant-governor.

Requiring the registration of union labels.

Having safe-blowing a crime punishable with
five to fifteen years' imprisonment.

Making it an offense to desecrate the United
States flag.

Providing an official State flag for Ohio.

Providing that grade-crossings in cities may be
abolished, the cost to be divided equally between
the city and the railroad company.

Several "sewer" bills affecting municipalities
were passed, but the subsequent action of the Su-
preme Court nullifying special enactments and the
adoption of a general municipal code disposed of
some of them.

The Legislature provided for the submission
of amendments to the Constitution to the vote of
the people at the November election, 1903: Giving
the General Assembly greater power in the matter
of classifying subjects for taxation under the gen-
eral laws of the State; the stockholders' liability
amendment, which in effect abolishes the double
liability laws of the Constitution; and providing
for single legislative districts.

A special session was called by Gov. Nash, and
was held from Aug. 25 to Oct. 22. The cause was
the necessity for the enactment of a municipal
code and the correction of an error in an act
passed at the regular session, the effect of which
was to prevent cases being appealed to the Su-
preme Court. Both objects were effected after
nearly two months of discussion, and, in addition,
a resolution was adopted submitting to the people
in 1903 a constitutional amendment permitting
the classification of cities into 3 divisions of over
100,000; between 25,000 and 100,000; and below
25,000.

Corrupt Practices in Elections.—A previous
Legislature enacted a law to prevent corrupt prac-
tises in elections. After each election candidates
were required, under penalty, to make sworn re-
turns of their election expenses. The law was
evaded by many and at times openly violated by one
candidate, who declared it to be unconstitutional.
The case was taken to the Supreme Court, which, Jan. 28, sustained the
constitutionality of the law. A few weeks later the Legislature repealed the
enactment.

Court Decision.—A complete revolution in
legislation for municipalities was effected by the
decisions of the Supreme Court in cases coming
before it from Cleveland and Toledo. These deci-
sions destroyed a system that had grown up year
by year for half a century, and reversed the posi-
tion which the court had held from the beginning
until recently. The Constitution provides that
"the General Assembly shall pass no special act
confering corporate powers," and in another sec-
tion that "all laws of a general nature shall have
a uniform operation throughout the State." Im-
mediately after the adoption of the Constitution
the Legislature classified the municipalities into
cities of the first and second classes, those hav-
ing a population of more than 20,000 peo-
ple in the first class, and the remainder with a
population of over 5,000 being in the second class
—incorporated villages, and incorporated villages
for special purposes. Successive Legislatures sub-
divided these classes, and finally substituted a pol-
icy of isolation instead of classification, while the
courts sanctioned many of the acts, but this was
done with reluctance and on the grounds of pub-
lic policy." Recently the Supreme Court, in some
minor cases, showed a disposition to check the
progress of special legislation, and in the cases
brought to oust the Police Board of Toledo and
the entire municipal government of Cleveland, ex-
cept the mayor, on the ground that the acts cre-
ating them were applicable to the respective class
only, a position was taken that left every munici-
pality in the State without a legal government.
In the decision made in the latter part of June the
court declared the present classification of the
municipalities of the State to be repugnant to the
Constitution and that the entire municipal code
of Ohio must be revised and brought into
harmony with the fundamental law of the State.
This was followed, four months later, with a deci-
sion in a school case which practically destroyed
all the special school laws of the State and made
necessary the enactment of a general school law
as well as a general municipal code. In both in-
stances execution of judgment was suspended that the Legislature might have time to act.

The Municipal Code.—The new municipal code provides for the government of cities and villages. All municipalities of 5,000 and over are cities. All others are villages. The organization of a city includes a mayor, president of council, or vice-mayor, treasurer, solicitor, and auditor. The last-named official is elected for a three-year term. The others are elected for two-year terms. Part of the council are to be elected on a general ticket and the greater number from wards of a specified population. Councilmen are elected for two-year terms, but half of them are retired each year. The real government of the city is practically vested in two boards, the board of public service and the board of public safety. The latter has charge of the police and fire departments, and the former of all the other departments of public service. The board of public safety is to be bipartisan and composed of 2 or 4 members, as the council may determine. The appointment is made by the mayor subject to confirmation by two-thirds of the council. If not so confirmed, the governor appoints. The board of public service, of 3 or 5 members, as the council may provide, is elected on a general ticket for two-year terms. This body is given unchecked control, the power of the council being, with the exception of confirming the board of public safety, civil service is expressly limited to the fire and police departments. In addition there is a board of health of 5 members appointed by the mayor, who is president of this board, and a bipartisan sinking-fund and tax commission of 4 members, also appointed by the mayor.

Political.—The Republican State Convention was held in Cleveland, May 28th. The following ticket was nominated after a sharp contest: For Secretary of State, Lewis C. Laylin; Judge of Supreme Court, William B. Crew; Member of Board of Public Works, William Kirtley, J.; Dairy and Food Commissioner, Horace Ankeney. The platform adopted was of great length, but was almost wholly devoted to national affairs.

The Democratic State Convention was held at Cedar Point, near Sandusky, Sept. 3. The candidates, with 1 exception, were nominated by acclamation, there being 1 ballot for the office of Dairy and Food Commissioner. The nominations were: For Secretary of State, Herbert S. Bigelow; Judge of Supreme Court, Michael Donnelly; Member of Board of Public Works, Joseph J. Pater; Dairy and Food Commissioner, Philip H. Bruck. The platform—after a preamble in which “continued allegiance to the Democratic party of the nation” was declared, and “the principles laid down in the last national platform adopted at Kansas City, and faithfully and fully represented in the presidential campaign of 1900 by William Jennings Bryan,” were reaffirmed and approved—dealt exclusively with State affairs, the several resolutions setting forth the principles of “home rule and just taxation,” and pledging the party to the accomplishment of these purposes in municipal and State affairs. The Socialist party held its State convention in Columbus, May 30, and nominated a full State ticket as follows: For Secretary of State, Max S. Hayes; Judge of Supreme Court, George F. Maxwell; Member of Board of Public Works, William C. Edwards; Dairy and Food Commissioner, George Flummerfelt. The platform called for municipal ownership, reduction of hours and increase of wages, $1,426,900.19; the total expenditures, $778,460; the
interest on Territorial funds amounted to $27,074.06; balance on hand Dec. 1, 1901, $372,153.92; interest on $750,584.44. The total amount of warred indebtedness on Nov. 30 was $884,176.09; deducting the balance on hand in treasury would leave only $35,788.39 indebtedness, or about 0.6 per cent. The year was the first in the history of the Territory in which the income from taxation was sufficient to pay the running expenses of the Government and a portion of the accumulated debt. During the year $108,414.33 of warrants were redeemed; the interest paid on these was $28,894.89. Territorial funds are deposited in banks which have been made depositories under authority of law. Funds are protected by securities required by law. Warrants were issued on the treasury for $406,998.98. The delinquencies on Territorial tax, covering eleven years, amounts to $232,597.55. The assessed valuation of the Territory is $72,672,423. This amount represents only about one-fourth of the real value of the property when estimated on a cash basis, which would be about $300,000,000.

Education.—The amount spent by the Territory from various school funds in the treasury in the year 1889 was $4,143.23; in 1890, $7,151.02; in 1891, $24,550.19; for two years past, $485,828.61; for all other purposes in the two years, $382,692.97. In the year 1872 public schools were taught, with an aggregate enrollment of 118.971, and $502,277.55 was paid to teachers. There were 1,802 pupils graduated from common schools. There was apportioned during the year among the counties, as a Territorial fund, $900 of cottonseed, 1,209 of hay, 4,842 of flour, 391 of horses and mules, 1,846 miscellaneous, and 164,552 bales of cotton. The imports amounted to 1,091 car-loads of farm machinery, 1,892 of flour, 2,583 of home-seekers' goods, 7,225 of coal. Oklahoma annually exports thousands of car-loads of flour and wheat to Europe and South Africa.

Commerce.—There were shipped out of the Territory, in the year 1893, 6,528,492 lbs. of cattle, 18,993 lbs. of wheat, 210 lbs. of corn, 308 of oats, 65 of castor-beans, 2,892 of hay, 700 of cottonseed, 1,209 of hay, 4,842 of flour, 391 of horses and mules, 1,846 miscellaneous, and 164,552 bales of cotton. The imports amounted to 1,091 car-loads of farm machinery, 1,892 of flour, 2,583 of home-seekers' goods, 7,225 of coal. Oklahoma annually exports thousands of car-loads of flour and wheat to Europe and South Africa.

Population.—The assessors' returns for 1892 show Oklahoma to have 541,480 population, an increase of 153,149 over 1901. Estimates now place the population at 600,000.

Public Lands.—This year, 3,089,502 acres of public lands were homesteaded, leaving 3,777,883 acres still open for settlement under the homestead laws; more than 3,000,000 acres of that are in Beaver County. Congress will be asked to extend the free-home measure over all these lands.

All the 2,055,000 acres of school lands, the property of the Territory for the support of schools, are now leased, the rentals for 1902 amounting to $300,000.

Agriculture.—The wheat-crop of 1902 amounted to 30,000,000 bushels; corn, 65,000,000 bushels; cotton, 10,000,000 bales; potatoes, 150,000 bushels; melons, 170,000 crates; peanuts, 50,000 bushels; oats, Kafir-corn, sweet potatoes, broom-corn, alfalfa, sorghum, timothy, clover sugar-beets, and all manner of fruits are grown in abundance.

Farm Lands.—There were listed for taxation in 1902, 3,044,002 acres of farm lands, an increase of 1,792,815 over 1901.

Resources.—The Wichita mountains produce copper, lead, zinc, gold, silver, magnesia, calcium, cobalt, nickel, manganese, barium, antimony, arsenic, aluminum, sulfur, and oil. Extensive oil developments have been made at Granite and in
the Osage Indian reservations; immense deposits of salt are found in Blaine, Woods, and Woodward counties, and saline reserves; granite is found in great beds near Granite and in Blaine County; and cement beds are inexhaustible in the Keechi hills and near Sterling. The oil strata are heavily charged with gas. Plants for developing mineral products have been erected at Granite, Wildman, Lawton, Oke, and Bartlesville, Indian Territory, near the Osage reservation.

Portions of Oklahoma are heavily timbered with oak, elm, walnut, pecan, hickory, sycamore, cottonwood, ash, cedar, etc. Within the year walnut timber has become one of the leading products of the Territory. Oklahoma furnishes a large part of the world's pecan-crop.

**Indian.**—The number of Indians in Oklahoma is 12,883, a decrease of 26 from 1901. Nearly 500 Arizona Apaches are held at Fort Sill by the Government as prisoners of war. Numbered by tribes, there are 1,960 Osages, 220 Kaw, 557 Potawatomi, 370 Otoes, 54 Tonkawas, 638 Pawnees, 479 Sauk and Fox, 91 Iowa, 1,722 Pottawatomies, 500 Shawnees, 2,808 Cheyennes and Arapahoes, 1,154 Kiowas, 1,467 Comanches, 164 Apaches, and 94 Delaware and allied tribes. The Osages are the only Indians unallotted at present. They own 1,400,000 acres, and the annual interest on their fund in the Government Treasury is $150,000, making them the richest people on earth, per capita wealth being about $18,000.

**Citizen.**—There are 20 cities of the first class in Oklahoma, with a population 30 per cent. greater than in 1890. The valuation of town property returned for taxation in 1902 was $11,629,188.

**Manufactures.**—There are 10 cottonseed-oil mills and 220 cotton-gins in Oklahoma; 2 cotton compresses; 228 grain-elevators, with a total capacity of 2,857,000 bushels; 48 flouring-mills, with a total daily capacity of 8,700 barrels. There are 531 manufactories of all kinds in the Territory.

**Penitentiary.**—Under contract the Oklahoma convicts are cared for by the State of Kansas at 35 cents each day. There were 287 convicts furloughed, 9,083 Oklahoma in the Fifty-ninth Congress by the conditions that grew out of the unifying of the remaining Territories in one bill. There were objections against Arizona and New Mexico, which united against Oklahoma. Recognizing that ultimate single statehood with Indian Territory is inevitable, the advocates of immediate statehood for Oklahoma are not radical in their demands.

**Political.**—Gov. William M. Jenkins retired at the close of 1901, and was succeeded by Thompson B. Ferguson, an original Oklahoman, of those who made the run for homes. The "home-rule" idea has been followed by the Government in the appointment of all officers in the Territory. Congress created two more places on the Oklahoma Supreme bench, and Associate-Justices M'Atte retired. Associate-Justices Gillette, Beachamp, and Pancoast (all Oklahomans) were nominated by the President. C. H. Thompson resigned as United States marshal, and was succeeded by another original Oklahoman, William D. Fossett.

**OCEANO.**—A Pacific coast State, admitted to the Union Feb. 14, 1859; area, 49,500 square miles. The population was 13,294 in 1850; 32,463 in 1860; 40,923 in 1870; 174,788 in 1880; 313,397 in 1890; and 413,338 in 1900. Capital, Salem.

**Government.**—The following were the State officers in 1902: Governor, Theodore T. Geer; Secretary of State and Auditor, Frank I. Dunbar; Treasurer, Charles S. Moore; Attorney-General, R. D. N. Blackburn; Superintendent of Public Instruction, J. H. Askew; Inspector, C. U. Gantzein; Chief Justice of the Supreme Court, Charles E. Weldon; Associate Justices, Robert S. Bean and Frank A. Moore; Clerk, J. J. Murphy—all Republicans.

The term of the State officers is four years, and they are elected in June of even-numbered years—alternating with the presidential elections. In June of all the even-numbered years members of Congress, the Legislature, and a justice of the Supreme Court are elected. The Legislature holds biennial sessions, beginning in January of odd-numbered years, and continuing for two years. It consists of 30 Senators, elected for four years, and 60 Representatives.

**Finances.**—Debt stock in 1899 was $96,150,000; capital stock in 1801 was $1,647,032; surplus, $186,432; undivided profits, $403,138; deposits, $6,701,334; demand certificates, $589,605; cashier checks outstanding, $39,074; due to banks, $183,314; bills payable, $39,721; bills receivable, $287,243. The number of national banks is 66; average reserve held, 18.5 per cent.; total deposits in national banks, $11,029,635.25; average deposit per capita in national banks, $22; average deposits in both national and Territorial (State) banks, $37,67; total deposits in all banks in Oklahoma, $11,772,900. The excessive amount of deposits held by the 66 national banks over the amount held by the State banks may be accounted for to a large extent from the fact that many national banks of the Territory are used as reserve agents by the Territory (State) banks.

**Statehood.**—Oklahoma is claiming eligibility to statehood. The claims are based on population, education, and wealth. The Republican party in Oklahoma made the campaign of 1902 on the issue of statehood for Oklahoma alone and at once. The Democratic party made the issue single Statehood for Oklahoma and Indian Territory. The law was passed, and the Territory is alleged to be unfit for statehood at this time, because the lands are still largely held in common by the Indian tribes. Legislation looking to statehood is discussed in the Fifty-ninth Congress by the conditions that grew out of the unifying of the remaining Territories in one bill. There were objections against Arizona and New Mexico, which united against Oklahoma. Recognizing that ultimate single statehood with Indian Territory is inevitable, the advocates of immediate statehood for Oklahoma are not radical in their demands.
the taxes will be assessed by the several counties at a ratio fixed by law.

The receipts of the treasury for 1901 were $2,367,746.60; disbursements, $1,889,134.64; balance Dec. 31, $828,287.25.

The Treasurer's report for the six months ending June 30, 1902, gives the receipts for that time, including the balance at the close of 1901, as $2,031,534.62; disbursements, $762,286.32; balance July 1, 1902, $1,269,250.30. The receipts of the general fund were $632,906.32; disbursements, $426,832.92. The receipts of the common-school fund were, principal, $380,458.08; interest, $119,909.98; disbursements from the principal, $244,700.00; interest, $10,000.00. The other principal item, which marked a considerable increase over the income from the same source of the preceding year, was $15,133.55 added to the balance on hand Jan. 1, 1902, as $1,013,292.61. The balance on hand Jan. 1, 1903, was $1,122,706.11, of which $234,823.76 was in the general fund and $724,772.25 in the common-school fund, the money in the general fund being sufficient to pay all warrants up to the time of the receipt of the spring taxes. The receipts of the general fund in the second half-year were $341,137.98; disbursements, $304,606.80. The common-school fund receipts were, principal, $351,197.05; interest, $117,721.04; disbursements from the principal, $332,600.04; and from the interest, $209,609.94.

The prices and products—We estimate the increase of wealth accruing to the State from five of its principal industries—lumber, wheat, wool, hops, and salmon—reaches $25,000,000. This amount, together with the results from other industries, makes 1902 as the most prosperous year in the history of the State.

A report on the forests by Henry Gannett, of the Geological Survey, estimates the timber in the State to be 213,898,000,000 feet. A board measure, an average stand per acre of timbered land of 12,200 feet. A wide difference exists between the sections west and east of the crest of the Cascades. Oregon. Of the report of the timber lands of Oregon, 60 per cent. of the Oregon timber, while of pine, including the yellow and sugar varieties, and oak, pine, maple, 15.6 per cent.; fir, 12.7 per cent.; lodgepole, 5 per cent.; and cedar, 2 per cent. The report gives a startling estimate of the loss sustained by the State through forest fires. The areas of burned timber (not including those of 1902) comprise not less than 6,005 square miles, where approximately 54,000,000,000 feet of timber has been destroyed. The burned sections west of the Cascades, which are well watered, are in some stage of reforestation. Other sections, burned from twenty-five to fifty years ago, bear no vegetation larger than brush and ferns.

No authoritative report on the lumber-cut of 1902 has been published, but a conservative estimate places the cut at 1,000,000,000 feet, valued approximately at $10,000,000.

Statistics published by the Department of Agriculture of the United States give the acreage, production, and value of the principal farm-crops of the United States in 1902, give the following for Oregon:

- Barley—acreage, 9,962,105 bushels; total value, $3,517,704.
- Wheat—acreage, 1,045,000 bushels; total value, $233,243.45.
- Potatoes—acreage, 35,724; production, 3,679,572 bushels; total value, $107,856.
- Tomatoes—acreage, 34,537; production, 700,815 tons; total value, $5,242,090.
- Flaxseed—acreage, 2,300; production, 15,064 bushels; total value, $10,081.

On June 1, 1900, the farms of the State numbered 36,837, and were valued at $182,827,514. Of this amount 14.5 per cent. represents the value of buildings and 85.5 per cent. the value of land and improvements. The number of farms in 1900 was 40.4 per cent. greater than in 1890, while the gain in acreage was 45.8 per cent. The value of all live stock on farms and ranges June 1, 1900, was $33,917,046, of which 32.6 per cent. represents the value of meat cattle other than dairy cows; 25.5 per cent. that of horses; 22.3 per cent. that of sheep; 12.1 per cent. that of dairy cows; 5.1 per cent. that of swine; and 4.4 per cent. that of all other live stock.

Increase was reported in the dairy industry, the production of milk showing an increase of 94 per cent., and the quantity of butter increasing 69.4 per cent., and that of cheese 75.9 per cent. The production of wool has gained 83.8 per cent. in ten years, the improvement in the grade of sheep being shown in the average weight of fleeces from 6.3 pounds in 1890 to 8.6 pounds in 1900. The increases in the acreage devoted to the several cereals in the last decade were: Wheat, 57.9 per cent.; oats, 13.5 per cent.; buckwheat, 60.8 per cent.; barley, 60.1 per cent.; rye, 47.4 per cent.; and corn, 40.4 per cent. Since 1890 the total number of orchard trees in the State has increased from 1,767,005 to 3,314,232. Of this increase, 49.8 per cent. has been in plum and prune-trees, and 32.2 in apple-trees. Small fruits, vegetables, and sugar-beets showed a satisfactory increase.

In 1900 15,434 acres devoted to hops produced 14,875,571 pounds. The hop production for 1902 was unofficially estimated at 80,000 bales, which would add $2,500,000 to the wealth of the State.

The salmon product of Columbia river and the coast streams for 1901 amounted to 21,123,739 pounds. Of this amount, Columbia river, State of Oregon side, yield 87.2 per cent.; Idaho, 7.3 per cent.; and waters of the State also yield sturgeon, shad, smelt, catfish, tomcod, bass, herrings, flounders, perch, and carp. Of those species, the product for 1901 amounted to 572,900 pounds. The yield of oysters, clams, and crab fish was 837,550 pounds.

The growth of manufacturing industries along the rivers and the attention given to land irrigation has resulted in the building of barriers, dams, and other obstructions that prevent the salmon from ascending the rivers to their spawning grounds, and restrict the feeding areas of the young fish, which remain several months in fresh water after being hatched.

The estimated value of the salmon pack for 1902 was $2,500,000.

The fruit-crop for 1901 was the best in the history of the State, and was valued at $2,375,000; that of 1902, falling somewhat below the high mark, still yielded $2,539,000. Apples and prunes were the largest and received production, each yielding more than $800,000. The finest Oregon fruits are shipped to the Atlantic States, England, and France. Large sales of prunes were made this year to French buyers, owing to the almost total failure of the crop in France.
The Food and Dairy Commissioner's biennial report shows the value of the butter and cheese output in 1902 to be $1,897,000. Of creamery butter 4,000,000 pounds were produced; 3,500,000 pounds of dairy butter; and 2,252,000 pounds of cheese. The output has increased 50 per cent. in two years. Cheeses are sold in California at an advance of 3 to 5 cents a pound over the native product. Butter is sold along the Alaskan coast. Economical administration of the department resulted in a saving of $1,500 out of the $7,800 appropriated by the Legislature.

At the end of October approximately 10,000 tons of beets had been cut, and the sugar product amounted to 23,000 sacks, with a further product of 2,000 sacks made from brown sugar. This yields 2,500,000 pounds of high-grade sugar.

In May $15,119.55 were disbursed to the various counties of the State, this amount being the 5-per-cent. fund derived by the State from the Government in the sale of public lands within the State for the year ending June 30, 1901. The division of the fund is made in proportion to the respective acreage of the counties. Multnomah County, with one-fourth the population of the State, received the smallest amount, only $69.90, since its area is but 211,120 acres.

These improvements are noted by C. H. Mclsaac, secretary of the Manufacturers' Association, who estimates the value of goods made in Oregon in 1901 to be about $30,000,000. Portland manufacturers furnished the Pacific-coast towns. The value of the output of woolen-mills in 1901 was more than $1,000,000. The ship-building industry has doubled in ten years. Exports of sashes, doors, blinds reached the value of $1,000,000 in 1901.

The people of western Oregon are giving increased attention to grazing, believing that their section is better adapted for the production and maintenance of live stock than for either fruit-growing or general farming. The shortness of the season does not afford the farmer time to develop his crops, and makes it difficult for him to compete with sections of the country where conditions are more favorable. The plentiful rains which last late in spring and come early in fall, provide the crops ample for the maintenance of large herds. The recent rapid growth in the dairy industries and the production of beef and pork for exportation attest the worth of this change in direction.

The output of gold in Oregon in 1902 amounted to $1,860,465; that of silver, $63,500.

Insurance.—The annual report of the Secretary of State as ex officio Insurance Commissioner, issued on April 1, showed that there were doing business in Oregon 59 fire and marine, 35 life and accident, 6 plate-glass, and 2 steam-boiler insurance companies, and 9 surety companies. Under the law requiring the payment of a 2-per-cent. tax on net premiums, $83,988.40 were collected. Licenses amounted to $5,927.36. Prior to 1901 the receipts from insurance companies went into the common-school fund, but an act of the Legislature of that year directed that this money be turned into the general fund.

Education.—In 1902 there were 138,466 children of school age in the State, an increase of 2,648 over the previous year: The number enrolled in the public schools was 100,659, an increase of 9 per cent. over the previous year. The number of students coming from other states this year to avoid the tax at the Agricultural College, at Corvallis, was 488, an increase of 52 over the previous year. Of this number, 29 students come from the State of Washington. The total enrollment for 1902 at the State Agricultural College, at Corvallis, was 100,659, an increase of 9 per cent. over the previous year. Of this number, 29 students come from other states. The tax to the Agricultural College, at Corvallis, was $488, an increase of 52 over the previous year. Of this number, 29 students come from other states. The tax paid by the Agricultural College, at Corvallis, was $488, an increase of 52 over the previous year. Of this number, 29 students come from other states.

The number of pupils registered Nov. 8 was 11,799. A statement from the Secretary of State shows that Oregon has raised in taxes for the State University and the Agricultural College in the past fourteen years $709,001.32; in addition to this, $220,359.18 accruing from the interest fund gives a total of about $930,000, as the cost of these institutions. The amount raised by taxes in 1901 was $183,717.08. A scarcity of teachers was reported by the Superintendent of Education, owing to the fact that teachers' wages had not kept pace with the increased wages in other occupations. Young men particularly have abandoned teaching in the past few years. The average wage of male teachers is $47.58 a month; of female, $37.61 a month. These amounts are an increase of a little less than $2 over 1901, but the cost of living has increased in a higher proportion.

The illiteracy statistics of the Census Bureau shows that 99.38 per cent. of the children of Oregon between ten and fourteen years of age were able to read and write in 1900. This places Oregon third in the Union in this respect.

Indian-War Veterans.—The veterans of the Indian wars of 1865–66 have petitioned the Legislature for $500 a month for life, as was asked that bonds be issued to that amount on the credit of the State. The Constitution specifies that the Legislative Assembly shall not create any debt or liabilities which shall, singly or in the aggregate, with previous debts or liabilities, exceed the sum of $50,000, except in case of war, or to extinguish or meet the insurrection. It is maintained that this provision of the Constitution is inapplicable in the present case, since the obligation to the volunteers was assumed under Territorial law, and the Federal Constitution prohibits any State making a law that shall impair the validity of contracts. The contrary argument maintains that, if the obligation is not already outlawed by the statute, it is binding upon the National Government, since Oregon was a Territory at the time and a State when the debt was incurred, and to the Government of the United States a fourth part of the pay offered to volunteers, which was at the rate of $2 a day. The petition, which has received signatures in all parts of the State, assumes that the United States will redeem the $300,000 bonds.

Rivers and Harbors.—At the first session of the Fifty-seventh Congress the bill passed providing for work on rivers and harbors contained an appropriation of $2,589,000 for Oregon and Columbia river. The annual report of the Chief of Engineers relative to Oregon river and harbor works contains the following as most important among its items: The amounts expended on projects of 1884 and 1893 toward the improvement of Columbia river at its mouth was $81,987.75; that expended on the present project $2,474.47: making a total of $2,202,227.61 to the 30th, 1902. Work carried on last year has been done with the view to facilitating early operations under additional appropriations, such as repairing the washed-away parts of the tramway and making surveys to determine changes in the course of the river channel. Two hundred and forty thousand dollars was appropriated toward the "Portland-to-the-Sea" project, which proposes a 23-foot channel to the sea by construction of controlling works, etc. Portland had about 750 more school-children in 1902 than in 1901; the number of pupils registered Nov. 8 was 11,799.
accessories, and $50,000 for maintenance. Dredging at various shoal places was the only work done in the year. The channel depth between Portland and Astoria has been increased 5 feet, with good navigable width. The maximum depth that could be carried on June 30, 1902, at mean low-water over the shallowest part of the river was about 19 feet.

The Navigation Committee of the Chamber of Commerce of Portland reported in January the unsatisfactory condition of the pilot and towage service at the mouth of Columbia river. The pilotage is all done by 9 men, who pool their earnings and control a pilot schooner, which they monopolize. They pay 10 per cent. of the pool's earnings to the Oregon Railroad and Navigation Company, which were destroyed, and recommends that the pilot commissioner grant licenses to all applicants who prove themselves competent, and also appoint a competent man to keep a register of pilots.

Fire and Frost.—Destructive forest fires occurred in September in Oregon and Washington, involving a total loss of $12,767,100 as estimated by the U. S. Forest Service. Of this amount, $9,510,000 was sustained by Oregon. The estimate includes the value of timber, farm property, and sawmills and other property which were destroyed. Eighty-six families were made homeless and 200 others suffered partial losses. Farm property worth $215,000 and sawmills aggregating $149,000 were burned. The burned area covered 170,000 acres, and 2,124,000 feet of standing timber was destroyed. Unextinguished camp-fires of berry-pickers and hunters, the careless burning of slashings, and in one instance the sparks from a locomotive, were the causes. The Cascade forest reserve, which is patrolled by rangers, escaped damage.

Severe frosts occurred in February, with hail damage to winter wheat. Umatilla County suffered to the extent of 100,000 acres killed, necessitating reseeding.

Legal Decisions.—In a suit to restrain public officers from collecting interest as part of a claim against a suspended bank where public funds had been deposited, the Supreme Court ruled that it is a felony for a public officer to loan public funds, and that this does not inhibit a mere deposit in a bank for safe-keeping, the money being at all times subject to order. Where funds so deposited are lost by the failure of the bank, the claim against the bank becomes a personal one when the officer makes the loss good from his personal funds, and until this is made good the claimant has no right to interest.

Bail Bonds.—Between March, 1901, and June, 1902, the appropriation of $50,000 by the Legislature of 1901 for the payment of coyote-sculp bounties was exhausted, and additional elections were held at the request of the Indians and allowed. At the present rate, the bounty law will cost the State $117,107 in two years. The law requires the counties to pay one-third of the bounty; but Baker County decided to discontinue the payment of the bounty on the ground that the destruction of the coyote removes the deadly enemy of the jack-rabbit, whose ravages to crops are worse than those of the coyote.

Public Lands.—In the first nine months of 1902 the receipts from payments on State lands amounted to $264,636.21. Of this amount, $240,937.85 resulted from the sale of school lands alone; the remaining $23,698.36 was received from sales of land taken on foreclosure of mortgage loans from the school fund. Nearly all the school land disposed of is sold on the installment plan, one-fifth of the purchase price being paid down, the remainder drawing interest at the rate of 6 to 8 per cent.

Two classes of public land exist in Oregon—Government land and State land. Government land is further classified as agricultural, timber, desert, or mineral, with specific terms for the acquisition of each; State land, though similar to the Government land, is acquired at the uniform rate of $1.25 an acre.

About 6,000 square miles in the Strawberry and Blue mountain regions of eastern Oregon have been temporarily withdrawn from settlement or entry of all public lands, with a view to their ultimate creation into a forest reserve. This action is taken not only to secure adequate water-supply and protection against forest fires, but to secure an adequate water-supply and storage and conservation in view of the increasing number of irrigation projects.

Indians.—The Indian appropriation bill passed by Congress in February contained $104,650 for the school at Chemawa, of which $91,850 goes to the support of the 550 pupils, $1,800 for the superintendent's salary, $6,000 for sewerage, and $5,000 for general repairs.

The Indians of the Umatilla reservation refused to obey the orders of Indian Commissioner Jones that they should cut off their long hair and lay aside their brilliant blankets for the clothes of the whites, looking upon the order as an infringement of their legal rights. They cite the case of an Indian who a few years ago recovered $200 damages for the loss of his hair, upon order of the Court of Indian Offenses, as a penalty for drunkenness.

Labor Day.—The first Labor Day proclamation in the history of Oregon was issued by Gov. Geer, Aug. 13.

Political.—The election of State Officers in June resulted in a Republican victory for all nominees but that of the auditor. In this case, George E. Chamberlain, the choice of the Democrats, won by a narrow majority. The other officers elected are as follows: Supreme Judge, Robert E. Bean; Secretary of State, Frank I. Dunbar; State Treasurer, Charles S. Moore; Superintendent of Public Instruction, J. H. Ackerman; Attorney-General, A. M. Crawford; State Printer, J. W. Whelan; Representatives to Congress, Thomas H. Tongue and J. N. Williamson. The vote on a proposed amendment to the State Constitution, providing for the initiative and referendum, was carried by a vote of 92,924 in favor to 5,608 opposed.

The platform adopted by the Republicans at their convention, April 2, contains the following planks: A demand and insistence upon the passage by Congress of the Mitchell-Kahn Chinese exclusion bill; a recognition of the right of labor to organize and combine for mutual protection under the law, and that the Labor Bounties and the Legislature enact all necessary legislation to protect labor in all its rights and privileges, with a further recommendation that Congress create a
department of labor in charge of a secretary, with a small staff in the Cabinet; and demand that the next Legislature pass a law placing all public officers of the State upon reasonable salaries, not to be increased during incumbent's term of office, and a prohibition of any further compensation or fees; a call for the creation of a mining bureau to promote the development of the mineral resources of the State; a recommendation to Representatives and Senators to endeavor to secure the speedy opening of Columbia river between The Dalles and Celilo, the clearing of all obstructions in the river from its mouth to the head of navigation, and the improvement of coast harbors and streams within the State; a protest against the entanglement of any plan, scheme, or proposition for leasing the public domain either to individuals or to corporations, believing that the public lands should be held in trust for the use and benefit of all the people under the homestead laws; a request for legislation to foster and support the fishing industries; a demand and insistence upon the passage by Congress of the Grout oleomargarine bill; a declaration of approval of the primary law passed by the Legislature in 1901, and a request that it be extended so as to apply to primary elections in all election precincts throughout the State; a recommendation that United States Senators be elected by popular vote.

The convention passed resolutions urging upon Congress immediate action on the bill to pension Indian war veterans of Oregon and Washington. The convention grants to Socialists a party may be seen by a comparison of the vote for President in 1900 with the vote this year for Secretary of State, viz., Socialist vote in 1900, 1,406; in 1902, 5,529. The prohibition vote increased from 2,530 in 1900 to 4,835 in 1902.

The plank relating to salaries of State officers brings again into notice a matter that has been agitated for a number of years at each succeeding election. The Constitution of the State, framed when there were hardly 50,000 people in Oregon, fixed a limit to the salaries of officials. The salaries of the Governor, for instance, is $1,500. In recent years no men could be found to serve for the small salaries named by the Constitution, and these amounts have been increased by allowances and fees passed by successive Legislatures as compensation for "extra services." The Governor actually receives $4,250 per annum, and for clerical assistance he has $1,200; his secretary receives $1,200. The most recent Governor, in order to force the Legislature to fix reasonable salaries for all officers of the State, threatens to veto any measure providing for fees or perquisites; and, moreover, insists that, should the Legislature not repeal the laws now in force which give fees to State officers, he will take whatever may be necessary to prevent the collection of the money allowed by law in violation of the Constitution.

The initiative and referendum amendment to the Constitution was passed at the November election. Every bill for an act must be introduced with the words "Be it enacted by the people of the State of Oregon." If the bill meets the approval of the people, it may stand as law after the Legislature enacts it; if they disapprove, they may reject it under the referendum clause of the amendment. Moreover, should the Legislature fail to pass any law that the people want, they can place it themselves at the polls. The same power which enables the people to pass a law also enables them to amend the Constitution independently of Legislative action. By the amendment just voted, it only requires that any proposed amendment shall receive, in order to become a part of the Constitution, a majority of all the votes cast in reference to it, instead of as formerly was the case, a majority of the votes cast at the election. The minority rule in cases of the application of the referendum, for it requires but 5 per cent. of the voters to compel the submission of a measure enacted by the Legislature. The consequence is, that an act which really meets with favor from a majority of the voters may be held up as long as eighteen months because 5 per cent. of the voting population wish to express their opposition.

Pennsylvania, a Middle State, one of the original thirteen, ratified the Constitution Dec. 12, 1787; area, 45,215 square miles. The population, according to each decennial census, was 434,373 in 1790; 602,365 in 1800; 810,091 in 1810; 1,047,507 in 1820; 1,348,233 in 1830; 1,724,033 in 1840; 2,311,786 in 1850; 2,906,215 in 1860; 3,321,851 in 1870; 4,392,891 in 1880; 5,328,014 in 1890; and 6,302,115 in 1900. Capital, Harrisburg.

Government.—The following were the State officers in 1902: Governor, William A. Stone; Secretary of State, John N. Gunther; Lieutenant-Governor, George J. H. Zink; Attorney-General, William T. Galloway; Auditor-General, E. R. Hardenbergh; Treasurer, James E. Barnett; Auditor-General, E. R. Hardenbergh; Adjutant-General, Thomas J. Stewart; Superintendent of Public Instruction, N. C. Schaeffer; Insurance Commissioner, Israel W. Durham; Commissioner of Agriculture, John Hamilton; Commissioner of Forestry, J. H. Rothrock; Dairy and Food Commissioner, Jesse Cope; Zoologist, H. T. Fernald; Factory Inspector, James Campbell; Veterinarian, Leonard Piorson; Librarian, George E. Reed; Superintendent of Public Buildings and Grounds, T. L. Eyre; Chief Justice of the Supreme Court, J. B. McCollum; Associate Justices, J. Hay Brown, James T. Mitchell, William P. Potter, John Dean, D. Newlin Fell, and S. L. Mestrezat; Prothonotaries, Charles S. Greene, William Pearson, and George Pearson; Justices of the Supreme Court, C. E. Rice, J. A. Beaver, William D. Porter, George B. Orlady, P. P. Smith, William W. Potter, and John Tin Mitchell. N. C. Schaeffer and Judges McCole are Democrats; the others are Republicans.

The Governor, Lieutenant-Governor, and Secretary of Internal Affairs are elected in even-numbered years for a term of four years; the Treasurer in odd-numbered years for a term of four years. The Secretary of the Commonwealth, the Attorney-General, and the Adjutant-General are appointed by the Governor at pleasure, and the Superintendent of Public Instruction for four years. The Legislature holds biennial sessions beginning in January of odd-numbered years; Senators are elected for four years, and Representatives for two years.

Finances.—In September, 1901, the Treasurer reported a balance in the general fund of $10,767,950.54. The public debt, Dec. 1, was $30,815,232. The appropriations for 1900 and 1901 were more than $50,000,000, or $7,017,756.78, and for 1902 to $13,975,877.46. The receipts at the treasury for July, 1901, were $17,127,432; total expenditures, $10,609,280; surplus, $6,518,152. The tax assessment of the State, including the general and sinking funds, $7,706,022.18. The amount collected and expended for the support of the poor was $2,346,732; construction and repair of streets $410; maintenance of common schools, not including the money received from the State treasury.
UNITED STATES OF AMERICA. (PENNSYLVANIA.) 791

$13,001,441; for other purposes, $30,856,147; total amount of taxes collected for all purposes, $58,740,731. Personal property yielded a tax of $462,215.

Valuation.—The value of all real estate Nov. 30, 1901, was $3,518,593,792, including both taxable and exempt from taxation, the valuation of personal property taxes in the county being $1,225,401,732. The aggregate value of all property subject to taxation for county purposes was $3,063,047,223, and the amount of tax derived therefrom $23,310,707. The aggregate value of property subject to State taxation was $761,337,604, from which the State derived a tax of $3,055,208.

Education.—In the year ending June 2, 1902, the number of pupils in the public schools was 1,165,309; teachers employed, 30,640; directors in charge of schools, not including Philadelphia, 15,269; graded schools, 17,102; superintendents, 139. The average daily expenditure was $16,183,712.83; cost of text-books, $825,477.77; total expenditure, $23,027,678.22; State appropriation for the school year, $3,530,000. The average number of teachers paid to teachers, $11,031,871.38; cost of text-books, $825,477.77; total expenditures, $23,027,678.22; State appropriation for the school year, $3,530,000.

Building and Loan Associations.—For 1901 and 1902 the number of building and loan associations in Pennsylvania was returned as 1,115, with a capital of $781,980,000, and assets amounting to $11,403,510. For 1901 and 1902 the number of associations is given as 1,188; membership, 290,573; assets, $11,517,281. Pennsylvania has a large number of the old-time associations that served the local communities so well for many years.

Banking.—The annual report of the Banking Department for 1901 shows the number of State banks to have been 107; trust companies, 158; savings institutions, 16; total, 278, an increase of 50 since 1900. The increase for the year of cash on hand was $13,373,072.92; increase of loans, $54,233,104.56; increase of investments, $24,885,183.41; increase of capital, $15,135,580.17; increase of surplus, $11,476,022.82; increase of undivided profits, $5,867,757.85; increase of deposits, $76,003,989.30. The amount of trust funds invested was $483,919.04; uninsured, $12,082,651.97; total, $50,586,502.04. The average deposits in each deposit, for all institutions, was $516.03; the number of deposit accounts was 936,319.

Insurance.—From the annual report of the Insurance Commission it appears that in 1901 the companies of the State issued 9,551 policies, insuring $26,198,743 upon the lives of residents of the State, an increase over the preceding year of 471 policies and $2,655,772 insurance. Companies of other States issued 654,415 policies in this State, insuring $296,292,735.12, making an aggregate by all companies of 664,366 policies, insuring $298,482,751.12, an increase of 7,472 policies and $1,753,303.12 insurance. The total of losses paid by all life companies in this State in 1901 was $14,161,740.61, of which home companies paid $1,797,864.16, and companies of other States $12,363,885.45. Pennsylvania companies had in force at the close of 1901 200,850 policies, insuring $491,044,590, against 175,024 policies, insuring $446,206,204 at the close of the year 1900, a net premium income of $18,785,725.67, against $17,148,353.82 in 1900. The total income from all sources was $24,064,016.84 in 1901, against $21,537,978.38 in 1900, being $2,942,441.88. Companies of Pennsylvania life companies in 1901 were $15,175,770.84, of which $10,341,534.12 was paid to policyholders. The entire income of assessment life companies of Pennsylvania for 1901 was $149,121.89. The expenditures were $134,491.33. The assessment companies of other States doing business in this State, and reporting, showed in 1901 a total income of $15,910,371.70 and expenditures amounting to $18,806,609.80. The fire and marine companies in 1901 numbered 32, with assets of $43,985,119; liabilities, $25,209,980; capital, $10,902,675; surplus, $6,382,334; total receipts, $31,901,647; losses paid, $11,832,381; dividends paid, $1,813,581; total disbursements, $26,779,989; risks in force, $2,862,180,526.

Railroads.—The statistical report of the president of the Pennsylvania Railroad for 1901 showed that the road was never in better financial condition. With all the improvements made and $5,000,000 set aside for others, the company was able to declare its regular 5-per-cent. dividend and an extra dividend of 1 per cent. It also ordered to be built 19,000 new cars. The gross earnings of all lines east and west of Pittsburgh for 1901 were $186,852,578, an increase over 1900 of $20,892,754. The net earnings were $64,913,491, an increase over 1900 of $10,175,414. After all expenses and deductions there was a balance of $10,857,972, which was distributed among the stockholders in a 6-per-cent. dividend. In 1902 the company made a substantial advance of wages to its employees.

Industries.—Pennsylvania produced 7,564,295 gross tons of pig-iron in 1901, an increase over 1900 of 992,607 tons. The market or realized value of the production for 1901 was $106,883,000, against $108,544,923 in 1900. The average yearly earnings for all wage-earners, skilled and unskilled, $528.24, was an increase over 1900 of $47.74.

The production of 7,950,720 gross tons of all kinds of steel for 1901 was an increase over 1900 of 1,702,945 tons. The 4,319,144 tons of Bessemer was an increase over 1900 of 830,575 tons. The production of 1,401,276 net tons of iron in 1901 was an increase over 1900 of 208,434 tons.

The capital invested in the tin-plate works manufacturing their own black plate was $10,525,000 for 1901, an increase over 1900 of $753,112. The production of 435,628,000 pounds of black plate for tinning was an increase over 1900 of 123,628,000 pounds.

Fourteen firms or owners in the State had active cement plants in 1901, with a capital invested of $19,271,981; and a total production, based on barrels, of Portland, natural, and improved cement, of 7,055,669, the market or realized value of which was $7,334,891.

In 1901 Pennsylvania had 200 active tanneries. The 12 bituminous coal districts of the State in 1901 produced 8,914,239 tons of coal. The 8 anthracite districts have more than 30,000 more employees than the 12 bituminous districts, though the bituminous districts have more mines and produced more coal. The production of anthracite coal as the greatly increased ratio of machinery and cost in all departments is accounted for by the difficulty in mining anthracite compared with bituminous coal.

Coal-mining in 1902 was seriously interrupted.
by the great strike of miners in the anthracite region. (See STRIKE OF THE COAL-MINERS.)

About 70 per cent. of the entire coke product of the state of Pennsylvania, which, in 1901, produced 14,355,917 short tons, an increase of nearly 1,000,000 tons over 1900.

Charities and Corrections.—On Sept. 30, 1901, the number of insane under commitment was 11,748, of whom 6,121 were men and 5,627 women. At the corresponding date in 1900, the aggregate number of insane in all institutions in Pennsylvania was 11,249, an increase of 499. The private institutions and sanitariums contained 729 patients at the close of the year, 290 of whom were men and 439 women. Of the insane persons, in all classes of institutions, on Sept. 30, 1901, 11,380 were white and 368 colored.

The number of convicts in the penitentiaries Oct. 1, 1900, was 1,911; to which were added in the year 1901, being 23 more than the commitments of the previous year. Number discharged, 1,040; leaving on Sept. 30, 1901, 1,955, being 316 fewer than at the corresponding date of the previous year. The number of juvenile delinquents residing in the reformatories on Sept. 30, 1901, was 1,459, a decrease of 34 from the number at the corresponding date of the previous year. Of the 724 convicts committed to the penitentiaries in 1901, 518 were convicted of crimes against property, and 206 of crimes against persons.

Lawlessness.—Besides the numerous acts and outrages of violence during the coal strike of 1902, other deeds of lawlessness were reported. At the end of January 2 murderers, under sentence of death, escaped from the jail at Pittsburg by overpowering and binding the guards. They were assisted in escaping by the wife of the ward, who fled with them, and was herself injured, by the officers who killed the convicts while they were resisting recapture.

At Chester, in February, a mob attacked the police station in an attempt to Lynch a negro who had killed a policeman. The attack of the mob was repelled by the police.

In June a mob at Harrisburg stoned the police and aided a negro prisoner to escape from their custody.

In September riots occurred at Lebanon, growing out of labor troubles, and it required the presence of militia to quell the disturbances.

Mining Disaster.—More than 100 men lost their lives in July at Johnstown, through an explosion in the mine where they were at work. The explosion was caused by fire-damp, and all but a few of the deaths were due to effects of the after-damp.

The New Capitol.—The contract for building the new State Capitol has been executed, and ground was broken in November. The cost agreed upon was $3,503,656.

Political.—The Republican State Convention, which met in Harrisburg, June 11, nominated for Governor Samuel W. Pennypacker, of Philadelphia, whose chief competitor for the nomination was John P. Elkin, Attorney-General of the State. The other State officers nominated were William M. Brown for Lieutenant-Governor and I. B. Boren for Secretary of Internal Affairs. The platform declared heartily approval and support of President Roosevelt, and pledged the convention to his nomination in 1904; it favored immigration laws whereby anarchy shall be driven from this country and the American working man be protected against unfair labor from abroad; and it approved the recommendation of President Roosevelt that the United States should enter into reciprocal trade relations with Cuba. The Philippine policy of the Government was strongly commended; adherence to the protective policy was demanded "in so far as it protects and tends to develop the industries and interests of the American people"; and the convention recommended "proceedings to check the growth of unlawful combinations intended to raise the price of commodities at the expense of the consumer."

The State Convention of the Democrats was held in Erie, June 25. Robert E. Pattison, who twice since 1863 had been elected to the office, was nominated for Governor, George W. Guthrie for Lieutenant-Governor, and James Nolan for Secretary of Internal Affairs. The platform was restricted to State issues, ignoring all national questions. Important bill drawn by him was the first from the State from the evils of lobbying, bribery, corrupt franchises, "pinch" legislation for blackmailing, etc., was promised in the event of Democratic success at the presidential election of 1904. In the minor ticket the Democratic candidates were endorsed.

The candidate of the Socialist-Labor Party for Governor was William Adams, the Prohibitionists nominated S. C. Broome. There were 114 Republican minor tickets in the field. The tickets nominated by the Union party at rival factional conventions were both declared invalid by a legal decision. Owing to lack of official backing the ticket of the State Committee of the People's party announced, on Sept. 30, the withdrawal of that party's ticket.

At the November election Judge Pennypacker was elected Governor by a plurality of 156,410, and the other Republican candidates received large majorities, while a Legislature was elected with 144 Republican majority on joint ball; three-fourths of the congressional delegation elected are Republicans.

A commission appointed by the Legislature of 1901 to compute the vote cast at the November election of that year for State Treasurer was announced in January, 1902, that Frank G. Harris was elected to that office by a vote of 435,040 and a plurality of 45,570 over E. A. Coray, the Fusion nominee. Mr. Harris assumed office December 1, 1902, to serve for two years.

A noteworthy event was the retirement, at the close of the last Congress, of the venerable Galusha A. Grow, of Pennsylvania, at the age of seventy-nine, after a public career of more than half a century. In the early days of the civil war he served with success as Speaker of the House. The first important bill drawn by him was the first homestead act giving land to actual settlers of Government territory. He retired from Congress in 1863, and was returned to the House thirty years afterward as Congressman at large. In this capacity he has served his State for ten years.

RHODE ISLAND, a New England State, one of the original thirteen, ratified the Constitution May 29, 1790; area, 1,250 square miles. The population, according to each decennial census, was 68,825 in 1790; 99,222 in 1800; 76,931 in 1810; 83,015 in 1820; 97,199 in 1830; 108,580 in 1840; 147,545 in 1850, 136,040 in 1860; 276,531 in 1880; 345,506 in 1890; and 425,536 in 1900. Capital, Providence.

Government.—The following were the State officers in 1902: Governor, Charles Dean Kimball;
Lieutenant-Governor, George L. Shepley; Secretary of State, Charles P. Bennett; General Treasurer, Walter A. Reed; Attorney-General, Charles F. Stearns; Auditor and Insurance Commissioner, Charles C. Gray; Commissioner of Education, Thomas B. Stockwell; Adjutant-General, Frederick M. Sackett; Railroad Commissioner, E. L. Freeman; Commissioner of Industrial Statistics, Henry E. Tiepke; Record Commissioner, R. Hammett Tilley; Factory Inspectors, J. Ellery Hudson, Helen M. Jenks; Surgeon-General, George H. Kenyon; Inspector of Beef and Pork, James R. Chase; Inspector of Lime, Herbert Harris; Commissioners of Sinking Funds, John W. Danielson and Henry B. Metealf; Inspector of Cables, S. B. Hoxsie, Jr.; Inspector of Scythe Stones, W. H. Comstock; Chief Justice of the Supreme Court, John H. Stinnes; Associate Justices, Parlon E. Tillinghast, George A. Wilbur, Horatio Rogers, W. W. Douglas, Edward C. Dubois, and John T. Blodgett; Clerk, B. S. Blaisdell. All the State offices were Republican.

Charles Dean Kimball, elected Lieutenant-Governor, succeeded Gov. William Gregory, who died on Dec. 16, 1901. George L. Shepley, having duly qualified, as the Deputy Chief Executive of the State, took the oath of office as Lieutenant-Governor on Feb. 18.

The State officers are elected annually in November, and begin their terms in the following January. The Legislature holds annual sessions, beginning in January. The length of the sessions is not limited, but the legislators can draw pay for only sixty days.

Legislative Session.—On the last day prior to the recess, April 4, the following laws were passed: A ten-hour law for street-railway employees, a free transfer-ticket act, a fifty-eight-hour law for women and children.

A law was passed providing for the building of State roads, and in pursuance thereof the State Board of Public Roads was organized on April 16. The "merger" bill was passed, creating the Rhode Island Company, which is expected to acquire and control the local traction, gas, and electric lighting corporations.

The divorce law, as amended by the General Assembly, went into effect on July 1. It requires of petitioners a domicile in the State of more than two years, instead of one year as before, and contains several other provisions tending to render divorces more difficult.

Amendments of the Constitution were submitted to the electors, the most important of which were Article XII, relieving the Governor and Secretary of State, respectively, from the duty of presiding over and keeping the records of the Senate, and Article XIII, securing to the minority party in the city of Providence a representation in the Legislature through the election of Assemblymen by wards or voting districts, in the same manner that aldermen or councilmen are chosen. These articles were ratified at the November election.

Judicial Decision.—One of the most important opinions from the United States Circuit Court for the district of Rhode Island in recent years was given by Judge Arthur L. Brown on the subject of the condemnation of lands in the town of Jamestown for Government purposes. The plaintiffs, James W. Newlin and Annie Ruff, owned neither the land taken by the United States nor the land adjoining it. But as the restrictive provision of the deeds of land in the Ocean island plat (including their lands and the lands appurtenant to, and necessary for the operation of any slaughter-house, forge, places for selling or compounding liquors, etc., on the plat, they contended that their restrictive rights and "negative easements" were destroyed; and, furthermore, if the United States should abandon its use of the lands taken and convey its title to private individuals, its grantees would have the right to carry on any of the offensive trades mentioned in the Highland deeds. The claim for compensation was about $350,000. Judge Brown held that the claimants had no property rights under their deeds to prevent such a use as the United States intends to make of the lands. "There is a clear distinction," he said, "between injurious acts done by private individuals for their own benefit and working injurious consequences, and acts, perhaps equally injurious, done for a public purpose in the execution of a public duty."

Industries.—The Providence Ice Company, which was organized over a year ago, and which took up the active operation of the majority of the ice interests in Providence about Jan. 1, has been absorbed by the New England Consolidated Ice Companies, the capitalization of which is $14,000,000. The new company is made up, to a considerable extent, of the same men who were identified with the organization of the Providence Ice Company.

The American Screw Company, of Providence, has absorbed the Massachusetts Screw Company, of Holyoke, Mass. The new plant will be removed to Providence and run in connection with the two large plants that the company already operate there. The producing capacity of the new plant will be at least 200,000 gross daily, though it is far smaller than either of the plants already in operation.

The largest foundry in the State is being erected by the Brown & Sharpe Manufacturing Company. The buildings will cover an area 360 by 380 feet. When the foundry is completed, 300 men will be added to the 2,000 already employed.

The census report shows Providence to be first in jewelry, silverware, and screw, and second in worsted goods, oleomargarine, and files. The other towns of Rhode Island compare favorably in special industries among the leading manufacturing centers of the nation, Pawtucket ranking seventh and Warwick tenth in cotton goods, Attleboro fourth and North Attleboro fifth in jewelry.

Coal.—Coal was discovered at Phillipdale, East Providence, some years ago. But the mine was neglected until the recent high price of coal made mining in this locality advisable. The mine has been proved to contain an abundance of good hard coal, and mining will be undertaken on an extensive scale as soon as the engine which has been erected has pumped out the water.

The Cranston coal-mine, which has been worked at intervals since 1864, is also about to be developed by the New England Briquette Coal Company, which has erected an extensive plant. All Rhode Island coal findings are said to develop better coal the deeper it is obtained from the surface.
Real Estate.—A summary of real-estate transactions in Providence and Pawtucket, based on the Providence City Hall records, reflects the general prosperity of the community. Conveyances show a gradual increase for the past five years, 1901 being 20 per cent. in excess of 1897. Real-estate mortgages, though fewer in number and amount in 1901 than in 1899, gain 5 per cent. in number and 11 per cent. in amount over 1898, and exceed those of 1900 by $50,000, excluding several trust mortgages recorded in that year. Discharges of real-estate mortgages show an increase of 14 per cent. in number and 30 per cent. in amount over 1893. Chattel mortgages were larger than in 1900, but were less than in 1896 by 20 per cent. in number and 22 per cent. in amount. There were 2,580 real-estate conveyances recorded in 1901. The total number recorded in 1900 was 2,375.

A total gain of $5,071,140 in the real and personal property valuation of Providence was reported by the tax assessors, whose labors for the year were completed Sept. 2. Of this total gain $3,177,920 was in real estate and $1,893,220 in personal property, a contrast to the valuation of 1898 in which the gain in real estate was $2,439,100, and a loss in personal property of $1,764,480.

Insurance.—In his report for the year, dated Feb. 15, 1902, the Insurance Commissioner recommended the creation of the office of State fire marshal, and urged other reforms. The report gives a summary of the condition of Rhode Island stock companies, which shows that while their admitted assets have increased by $41,455, their liabilities have increased by $256,631, and their surplus shows a decrease of $215,176. The report shows that 60 per cent. of the total amount of premiums collected in the State from both fire and marine business last year was paid for losses. The report contains a statement of the condition of other insurance companies doing business in the State, showing a decided improvement over the figures of the preceding year for United States branches of foreign fire-insurance companies, the percentage of losses incurred being materially reduced. The business of the mutual fire companies shows a decrease of $86,198,257 in the amount of risks written, $422,813 in the amount of premiums earned, and an increase of losses incurred of $104,109. The business in the mutual fire companies of other States reporting shows an increase of more than 100 per cent. in the figures of 1901.

Education.—The school census shows a material gain over the figures of 1901. The enumeration was as follows: Public schools, 25,207; Catholic schools, 4,589; select schools, 583; no school, 3,922; total enumeration, 34,922. This was a gain over 1901 of 4.8 per cent. The attendance showed a gain of 4.5 per cent. in the public schools, of 9.1 per cent. in the Catholic schools, and 21.7 per cent. in the select or private schools. The number attending no school was exactly the same in 1901, viz., 3,922.

The Rhode Island Institute of Instruction held its annual meeting in Providence, Oct. 23, 24, 25, and attracted more than the usual number of visitors from the New England and Atlantic States. The proceedings were of more than ordinary interest, the exhibit of educational methods being particularly important.

Brown University.—The opening of the academic year, Sept. 17, was marked by a large number of new courses of study, showing a wider range and broader selection in electives than heretofore; among them a new course in mineralogy, a course of research work in economic problems, in which the laboratory method is applied to the study of a new course in Greek and Roman life, and several new courses in history and advanced German. Extensive additions were made during the summer to the equipment of the chemical laboratory. The entering class was the largest in the history of the institution.

The university received $100,000 from the estate of George L. Littlefield for the establishment of the George L. Littlefield professorship. All the estate, exceeding $500,000, was to go, after certain bequests were paid, to Brown University to establish a fund to be known as the George L. Littlefield fund.

At the beginning of the year John D. Rockefeller offered to give the college $75,000 for a building for social and religious purposes, provided $25,000 were raised before the next commencement. This sum having been collected, a suitable site on the university ground was selected for the building.

Rhoene Island Hospital.—The deficiency account of the hospital stood at $110,815.07. This was the excess of the expenditure over the income since Sept. 30, 1899. The patients admitted in 1901—02 numbered 3,282. The hospital received a bequest of $4,000 from the George L. Littlefield estate.

Harbors.—By the river and harbor bill Rhode Island secured $100,000 for improving Point Judith harbor, $30,000 for a harbor of refuge at Block island, and $50,000 for Great Salt Pond harbor, Block island.

The work on the naval coaling station at Portsmouth Grove was so far advanced in December that it was expected to be in commission next summer. The framework for the great steel shed was already in place. The pier was built and used as a landing-place for material, and the work of putting on the T-head was in progress. Along this head there will be room for the largest and heaviest ships of the navy to be tied up.

Foot and Mouth Disease.—Immediate action was taken by the State Board of Agriculture, at a meeting on Nov. 4, to check the foot and mouth disease, which had suddenly made its appearance among the cattle, sheep, and hogs of northern Rhode Island. As the disease had established itself in a very virulent form, attacking the holstein herd, the board decided to take prompt measures for its extirpation, anticipating the next appropriation.

Political.—At the Democratic State Convention, in Providence, Oct. 4, the following nominations were made: For Governor, Lucius F. Garvin; Lieutenant-Governor, Adelard Archambault; Secretary of State, Frank E. Fitzsimmons; Attorney-General, Dennis G. Holm; Treasurer, Clark Potter. A State platform was also recommended by the State convention, which left national issues to be taken up by the congressional convention that was to follow. The platform declared that the paramount issue was "the redemption of the State of Rhode Island from the hands of those who have used, and still intend to use, the executive and legislative branches of the State government for their own personal aggrandizement"; that legislation "has been in the interest of the quasi-public corporations, and has gone so far as even to divide the income of the State"; it declared that the truest principles of government require
the initiation and referendum; demanded the abolishing of all property qualifications for voting; home rule for cities and towns; municipal ownership of public utilities, street-railroad, electric and gas lighting plants; education by enforcement of the compulsory instruction law; and providing of sufficient funds to allow every child eligible to attend school; equal taxation of corporate and private property, and the enforcement of the factory-inspection law. It opposed government by injunction and favored the election of Senators of the United States by the people. It censured the amendment to the Constitution, because it was a special law, apportioning solely to the city of Providence, but declared the readiness of the Democratic party to cooperate with the Republican party in giving the State a district representation, not only of the city of towns.

At the Republican State Convention in Providence, Oct. 6, these candidates were nominated: For Governor, Charles Dean Kimball; Lieutenant-Governor, George L. Shepley; Secretary of State, Charles P. Bennett; Attorney-General, Charles F. Stearns; General Treasurer, Walter A. Read. The platform inored the administration of President Roosevelt, especially his attitude with wise and enlightened regard to our relations with the new republic of Cuba”; declared his record merits nomination for President in 1904; praised the army’s work in the Philippines; reaffirmed the wisdom of the American system; called for summary treatment of evils growing out of trusts; said tariff readjustment should be left to a Republican Congress; commended the scheme of education and ultimate self-government established in the Philippines; and referred at length to what the party has done for the State. It commended to the electors the articles of amendment of the Constitution submitted to them by the Legislature, and accused the Democracy of opposing the articles, although conceding them to be meritorious. It approved the administration of Gov. Kimball and applauded “his action in calling to the assistance of the civil authorities the militia of the State for the protection of citizens and property from lawlessness and mob violence.”

The Prohibitionists held their convention on Sept. 21, and nominated for Governor William E. Brightman; Lieutenant-Governor, Cyrus A. Aldrich; Secretary of State, William G. Lawton; Attorney-General, James A. Williams; General Treasurer, John W. P. King.

At the election, Nov. 5, the Democratic candidates for Governor and Lieutenant-Governor, Lucius F. C. Garvin and Adelard Archambault, were elected. Dr. Garvin’s total vote was 32,279. His plurality over Gov. Kimball, who received 24,541 votes, was 7,738. The rest of the nominees for State offices on the Republican ticket were elected. The House remained Republican, with a decreased majority, 37 Republicans to 35 Democrats. The Senate contains 27 Republicans and 11 Democrats.

SOUTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution May 23, 1788; area, 30,570 square miles. The population, according to each decennial census, was 247,073 in 1790; 345,501 in 1800; 415,115 in 1810; 502,741 in 1820; 581,185 in 1830; 594,398 in 1840; 688,507 in 1850; 703,708 in 1860; 705,606 in 1870; 905,577 in 1880; 1,151,149 in 1890; and 1,340,516 in 1900. Capital, Columbia.

Government.—The following were the State officers in 1902: Governor, Miles B. McSwiney; Lieutenant-Governor, H. T. Easterly; Secretary of State, Marion R. Cooper; Treasurer, R. H. Jennings; Comptroller, J. P. Derham; Attorney-General, G. Duncan Bellinger; Superintendent of Education, John A. McAlhahan; Adjutant-General, J. W. Floyd; Geologist, Earle Sloan; Director of the Dispensary, Leon J. Williams, H. H. Evans, A. F. H. Dukes; Railroad Commission, J. C. Wilborn, chairman; and Messrs. Garris and Wharton; Liquor Commissioner, H. H. Crum; Chief Justice of the Supreme Court, Henry Melver; Associate Justices, Y. J. Pope, Eugene B. Gary, Irw B. Jones; Clerk, U. R. Brooks. All are Democrats.

The State officers are elected in November of the even-numbered years, for terms of two years. The Legislature meets annually in January; it consists of 41 Senators and 124 Representatives.

Finances.—The Governor’s message to the Legislature of 1903 gives the following as to financial conditions: The income to the State for the year ending Dec. 31, 1902, was: Cm. balance, Dec. 31, 1901, $237,743.25; back taxes, $1,001.12; general taxes, 1901, $693.03; 1902, $325.79; railroad assessments for Railroad Commission, $7,488.46; income tax, $413.90; fees from office of Secretary of State, $12,160.92; incorporation fees, $70; annual insurance license fees, $125; graduated insurance license fees, $16,345.28; privilege fertilizer tax, $81,749.94; loans (borrowed on notes of Governor and Treasurer), $349,420.14; insurance sinking-fund, $4,365.25; State permanent school fund, $25,033.82; special school fund (dispensary), $142,755.91; Merrill fund (from United States Government), $25,000; commissioners sinking-fund (ordinary); Loans returned, $33,860.75; interest on loans, $1,812.20; agent Sinking-Fund Commission, $111,106.49; sinking-fund reduction, $138,042.44; discounts, South Carolina, $2,113,821.75; refunds, sundry accounts, $2,659.52; total, $4,214,402.76.

The disbursements included: Legislative expenses, $44,255.47; educational and charitable institutions, $297,300.94; Colored Normal, Industrial, Agricultural, and Mechanical College, $29,617.93; pensions, $200,108.80; artificial limbs, $1,999.26; State permanent school fund, $2,247.06; special school fund (dispensary), $1,156.73; public printing, $21,064.73; quarantining the State, $7,041.02; maintaining militia, $7,688.86; South Carolina Interstate and West Indian Exposition, $17,855.97; election expenses, $21,550.67; interest on public debt, $274,066.68. The total expenditures were $3,783,605.05; cash balance Dec. 31, 1902, $430,707.71.
Valuations.—The total valuations for assessment in 1902 were $106,537,061, of which $107,010,298 was real, $61,018,560 personal, and $27,506,203 railroad property. The total increase for the year is $6,263,902.

Education.—The number of illiterates in the State by the last census was 338,659. In the percentage of children from ten to fourteen able to read and write South Carolina stands forty-ninth in the list of States and Territories, with 70.44 per cent. The compulsory-education bill did not pass the Legislature. The average number of weeks of the school term in 38 out of 40 counties was twenty-one for the white and 14.97 for the colored schools. The average value of schoolhouses is $178. The average monthly salary of teachers is given as $25.78 for men and $24.29 for women.

In the session of 1901–02 of South Carolina College 215 students were matriculated. Of these, 23 pursued the classical course, 47 the literary course, 33 the scientific course, 36 the normal course, 34 the special course, 32 the law course, 10 the graduate course. The men students numbered 186; women, 29.

The report of the Citadel Military Academy shows an enrollment of 129, with 36 graduates in June. The estimate for support for the year is $25,000.

The attendance at Clemson Agricultural College has grown from 350 in 1896 to 530 in 1902. In April 60 of the 74 members of the sophomore class left the college because their petition for the reinstatement of a classmate who had been suspended for breaking a rule was not granted. The dissatisfaction spread to other classes, and the trustees, after a hearing, reinstated the suspended student. The president then resigned, but the trustees voted not to accept the resignation. He did, however, retire, and the college year 1902–03 began with a new administration.

The State College for Colored Students, at Orangeburg, had an enrollment of 624 students. The estimated cost for the year 1902–03 is $823,320.27, of which the income covers $18,315.15, leaving a deficiency of $704,949.12. The deficit is $5,000 more than the State may contribute; $5,000 is needed to finish and equip the new building on which $5,000 has so far been spent.

In Winthrop Normal and Industrial College for Girls the number of officers, teachers, and assistants was 43, compared with 38 for the previous session, and the enrollment in the college, not including 90 pupils in the model school and kindergarden, was 456, against 372 for the previous year. The amount required for ordinary expenses is $63,550; tuition and other fees amount to $10,974, leaving more than $50,000 to be provided by the State.

Other colleges in the State sent out graduates as follows: Newberry, 11; Erskine, 11; Due West Female College, 20; Furman University, 14; Greenville Female College, 17.

The State Medical College gives 7 free scholarships to young men and women appointed by the Governor, one from each congressional district.

Charities and Corrections.—In 1902 506 new patients were admitted to the State Insane Hospital; the daily average was 1,134, and the whole number under treatment 1,011. The institution is overcrowded.

At the State Penitentiary 183 new convicts were received, 194 were discharged, 30 were paroled, 11 escaped, and 45 died. Dec. 31 there were remaining 701.

The total receipts, including balance, were $84,009.21; the current expenses, $82,657.07; for permanent improvements, $4,300 was expended. The balance, Dec. 31, was $17,112.14, in addition to which $6,300 had been earned but not collected, and $12,000 worth of farm-products were on hand.

Militia.—The numerical strength of the volunteer troops, including all branches of the service, rank and file, is 3,000, composed as follows: Three regiments of infantry, 1 regiment of cavalry, 1 company of artillery, and 3 divisions of naval reserves.

The Dispensary.—Of this institution the Governor says:

"For the first time since the dispensary law was enacted it was not an issue in the political campaign for the governorship the past year, as all the candidates for Governor were pledged to its support and to the strict enforcement of the law. The greatest opposition to the system of State control of the sale of liquors is in the larger cities. As recently as three years ago there was illicit sale of liquor in these cities, and there will continue to be until public sentiment in these communities grows more strongly in favor of the dispensary system and juries and jurors regard more seriously their oath and convict persons who are proved guilty of the violation of the law. The business the past year has increased, which may be taken as an evidence that the people are becoming more in sympathy with the law, rather than that the consumption of whisky is increasing.

"The amount to the credit of the school fund on Nov. 30, 1902, was $517,842.12; total, $730,523.17.

"Under the act of the last Legislature requiring the directors to pay to the State Treasurer quarterly the profits to the credit of the school fund three payments have been made aggregating $92,755.94. The same act requires that the profits to the credit of the school fund carried as stock shall be reduced by semiannual payments to $400,000 by Jan. 1, 1904. Under this requirement $100,000 have been paid to the State Treasurer for the past year. The following figures show the total net profits for the year ending Nov. 30, 1902, from the sale of liquor and beer: From whiskey to towns and counties, $392,988.36; from beer to towns and counties, $90,515.40; total $443,198.76; net profit to the State, $123,699.07; total net profit, $565,897.83."

In connection with the dispensary, the State has a claim against the Government for taxes alleged to have been illegally collected. The contention is that the Government cannot tax the agencies of a State government.

Industries and Products.—According to the census reports of 1900, there were 155,353 farms in South Carolina, averaging 90 acres. The average farm of the white farmer was 143.7 acres, that of the negro farmer, 44.4 acres; 69,954 white farmers and 85,401 negro farmers; 31,120 whites owned their farms, and 15,903 negroes could show titles for theirs; 2,934 whites were part-owners, and so were 2,316 negroes; 24,871 whites were owners and tenants, as also were 91 negroes. There were 874 white managers of farms and 159 negro managers. The white cash tenants numbered 14,015, the negro cash tenants 42,434; the white share tenants were 16,621 in number, the negro share tenants 23,675. Fifty-five per cent of South Carolina's farmers were negroes.

The total value of the farms was $1,845,501.18 of which $909,056,800 represented the value of land.
and improvements, excepting buildings; $26,955,-
670, value of buildings. The labor to work the
farms cost $6,107,700.
Of the farms, a large majority, 112,622, were
devoted to cotton-raising, and these were worked
by 46,137 whites and 66,085 negroes. The growth of
the mill industry, drawing labor away from the
fields, has retarded progress in farming.
The report of the cotton-crop of 1901-192 credited
this State with 925,000 bales, against 911,000
the year next preceding. The consumption in the
State mills was 614,905 bales, an increase of 103,-
579. The number of mills was 134, with 57,952
looms and 2,179,528 spindles.
The tobacco-crop of 1899 was valued at $1,297,-
293, the State standing tenth in the value of the
crop. The value of the sweet-potato crop the same
year was $1,598,205.
South Carolina claims to have the only tea
plantation in America, and its product is said
to bring the highest price ever paid for tea here.

A view from a partition of construction in 1901 it
appears that there were established here 6 textile
mills, with 1,200 looms and 62,748 spindles. In
the fall of 1899, Secretary of State issued charters and commissions to 18 new
cotton-mills, with a total capitalization of $3-
880,000.

The first half of the year 4 new cottonseed-
mills were established, with $110,000 capital.
The question of child labor in the mills is at-
ttracting much interest. The growth of the
cotton-mill industry has been phenomenal—from
$2,500,000 capital in all textile industries twenty
years ago to $35,000,000 at present. And this
has drawn attention and raised the question how
much cheap labor has had to do with the rapid
progress. Naturally those interested in the pros-
perity of the mills do not credit the opponents of
child labor with motives of unmixed philan-
thropy. So far it seems that there has been no
State legislation against it; a bill introduced at
the session this year was defeated. According to
the mill-owners, the number of children under
twelve employed is less than 4 per cent. Twelve
months, however, rather low average limit.
The royalties from the phosphate industry this
year were a little less than those of 1901—about
$250,000.
The State House.—This building, so long un-
finished, was completed and accepted in May.
The recent outlay upon it was $175,623.
Railroads.—The mileage of the railroads is
more than 5,000, the gross earnings nearly $12,-
000,000, and the income, less operating expenses
and taxes, near $4,000,000.
The alleged discrimination of the Southern
Railway company against the city of Charleston
had a thorough hearing and investigation, result-
ing in a decision not wholly in favor of either side.
The Southern Railway has taken in four roads, all
separately, and the city operated by it. The Atlantic Coast Line and the Plant sys-
tem were consolidated also.
Banks.—The aggregate capital of new banks
organized this year, up to Dec. 31, is $671,000.
Insurance.—The preliminary report of the
American insurance companies doing business in
the State shows a total of premiums in 1901 of
$814,746, and of losses paid $334,712. The for-
ign companies received $316,117.80 in premiums,
and paid $198,826.47 in losses.
Lawlessness.—Four negroes were implicated
in a murder committed by the Road crew in
Charleston, in June. One was killed while trying
to escape arrest; two of the others were lynched.
An atrocious murder was committed near Troy
in December. W. K. Gay, a young farmer, was
shot in his own yard by a negro or his wife, both
of them living on the place. Both of the negroes
were lynched at midnight.
Legislative Session.—The General Assembly
was in session from Jan. 14 to Feb. 22. W. F.
Stevenson was Speaker of the House.
At the opening of the session the Governor
sent in vetoes of two of the acts of the session of
1901. One was a local bill; the other was the
act repealing the antifree-pass act.
The dispensary officials were all reelected: H.
H. Crum for Commissioner, Leon J. Williams for
chairman, and H. H. Evans and A. F. H. Dukes
members of the Board of Control.
Ira B. Jones was reelected Associate Justice of
the Supreme Court. For Circuit Judges, Charles
G. Dantzler, James Aldrich, R. O. Purdy, R. C.
Watts, G. W. Gage, and J. C. Kughs were elected.
W. B. Love and W. D. Mann were reelected
directors of the Penitentiary; and John T. Sloan
and Robert MacFarland trustees of the South
Carolina College; J. E. Brezeale and Willie
Jones were elected trustees of Winthrop College;
and for trustees of the University of South Carolina,
Augustine T. Smythe, W. D. Evans, and John S.
Garris were elected; and for trustees of the State
Colored, College A. L. Dukes and Cole T.
Please. Miss L. H. Laborde was elected to fill
the unexpired term of the former State librarian.
The acts and joint resolutions of the session
numbered 175.
The congressional districts were redivided.
A constitutional amendment was proposed. It
is for the relief of townships that issued bonds
for railroads that have not been built or have
been abandoned. The amendment provides for
destroying the corporate existence of the town-
ships, abolishing all township affairs, and remov-
ing all corporate agents. The United States
courts have held that the obligation is legal, so
that the townships saw no other way to obtain
relief. Eight townships were affected.
An act "to further define connecting lines of
common carriers and fix their liabilities" was
passed. The object of the act is to facilitate the
collection for loss or damages to freight by ship-
ers and consignees, by requiring the delivering
carrier to make settlement, instead of compensating
the one who claims from finding out the particu-
lar carrier by which the loss or damage was sus-
tained.

Other acts affecting railroads were: To pro-
vide the measure of damage to which any com-
mon carrier may be held for the conversion to
its own use of any property held by it on con-
signment or in course of consignment; to incor-
porate the French Broad and Southern Railroad
Company; to authorize the consolidation or
merger of the capital stocks, franchises, and
properties of the Asheville and Spartanburg Rail-
road Company, the South Carolina and Georgia
Railroad Company, the South Carolina and
Georgia Railroad Extension Company, and the
Carolina Midland Railway Company under the
laws of this State, and to authorize and empower
such consolidated company to make a lease of its
railroad properties and franchises to the South-
ern Railway Company; and to require electric
street-railway companies to provide trains and
vestibules for the protection of motormen.
The existing road law having been pronounced
unconstitutional, in that it had different service
on the roads for different counties, an amend-
ment left the exact number of days to the county
commissioners, and fixed a maximum and a mini-
mum service.
Among the acts affecting corporations were: 
An antitrust bill prohibiting the formation of pools, trusts, combinations, confederations, etc., to regulate prices, and declaring those entering such combinations to be guilty of conspiracy to defraud; providing for an unlimited number of directors for banking and trust corporations and to enable such corporations to divide the same into two classes—active and advisory—and prescribe distinct duties for each class; and empowering cities and towns to give exclusive franchises to persons or corporations furnishing water or light thereto, respectively, under certain conditions. 
The House passed a resolution calling for a commission to examine into the advisability of establishing a State fertilizer plant to be operated by convicts. The object, or one object, was to establish competition against the Virginia-Carolina Chemical Company, now controlling most of the fertilizer factories and regulating the prices. 
The amount for Confederate pensions was raised to $200,000. Bills were passed to regulate county aid to ex-Confederate soldiers, and to prevent their disfranchisement; the office of county pension commissioner was created, and the duties of county pension boards defined and regulated. The act exempting ex-Confederate soldiers and sailors from taking out licenses as hawkers or peddlers was amended by making it apply to towns and cities. Certain broken granite columns lying on the State-House grounds were given to women's organizations to be used for Confederate memorials. Tillman, the Southern Cross by others than those entitled to wear it was prohibited. The purchase of 300 volumes of The Confederate Woman's Book, to be placed in the libraries of the public institutions and colleges of the State, was ordered. 
A concurrent resolution declaring "that the thanks of every true American citizen is due to that great naval chieftain Winfield S. Schley, his officers and men, for their gallant conduct in the harbor of Santiago, on July 3, 1898," was passed. 
Other enactments were: 
Declaring the code as submitted by the Code Commissioner the only general statutory law of the State. 
To define train-robbing and fix the punishment therefor. 
To establish Lee County. 
To amend an act to regulate the carrying, manufacture, and sale of pistols, and to make a violation of the same a misdemeanor. 
To regulate the qualifications of non-resident executors. 
To require certain agricultural investigation and experimentation in the coast region by Clemson College. 
To provide for the running of public schools on a cash basis. 
To amend the act to regulate the rate of interest upon contracts arising in this State for the hiring, lending, or use of money or other commodity. 
To require municipalities to provide drains for surface water. 
To provide for the preservation of valuable documents and papers of the State. 
To regulate the catching and sale of oysters, clams, and terrapins, and to provide a county inspector. 
To amend the statute prohibiting sale and shipping of partridges for five years, so as to include deer and wild turkeys in its provisions. 
Fixing the State tax levy at 5 mills. 
Extending the provisions of the statute on kidnaping so as to make it applicable to any case of taking away a minor without the consent of the parent or guardian. 
Appropriating $2,000 for artificial limbs for veterans. 
The Governor recommended the enactment of a compulsory education law. 
A bill to that effect was introduced in the Senate, but failed by 2 votes. 
A bill to abolish child labor was defeated in the House by the same majority—2 votes. Most of the votes in favor came from outside the hill counties. A ten-hour labor law was defeated also. 

A resolution for a constitutional amendment making the legislative sessions biennial was lost. 
The Quarrel of the Senators. The incident related on page 761 of the Annual Cyclopedia for 1901 had as a sequel the fight between the two Senators from this State on the floor of the Senate, Feb. 22, which is given in the article Congress in this volume. 
The Lieutenant-Governor. This official has come prominentely before the public in two instances in which he is affected. In one, the election was not contested, but which had given notoriety from the fact of his holding a State office. Early in the year he had raised money to present a sword to Major J. M. Jenkins, a soldier who served with distinguished gallantry with the Rough Riders and was highly praised by the President in his written history and in a letter to Lieut.-Gov. The warrant given Lieut.-Gov. was sentence or two from the letter engraved upon the scabbard of the sword. It was arranged that the President should present the sword during his intended visit to the exposition at Charleston. When the invitation to the dinner for Prince Henry was recalled from Senator Tillman, his nephew, the Lieutenant-Governor, telegraphed to the President that the invitation to him to present the sword was withdrawn. As far as is known, the other contributors were not consulted. Tillman was a candidate for the office of Governor in the State campaign and was strongly opposed by the editor of a Columbia newspaper, The State, N. G. Gonzales, who was fatally shot by Tillman in the street when walking home, unarmed, from his office, Jan. 1, 1902. One of the incidents of the quarrel between the men was in relation to a ruling made by the Lieutenant-Governor while presiding in the Senate. He ruled that a motion to postpone indefinitely was not debatable. When the decision was questioned he telegraphed to Senator Frye and Speaker Henderson and declared that both had pronounced his ruling right. This was taken up by the editor of The State, who upon inquiry received a denial from each of those presiding officers, both of whom said they had answered that the motion was debatable. He published the correspondence. 

Political.—As there is practically no opposition to the Democratic ticket at the State election, the interest centers in the primaries. They were held Aug. 29 to nominate a successor to Senator McLaurin, and candidates for State officers. The candidates for the office of United States Senator were A. C. Latimer, D. S. Henderson, George Johnstone, William Emmor, J. J. Hemphil, J. G. Evans. For the State officers the following were in the field: For Governor, W. H. Timmerman, J. F. A. Ansley, D. C. Heyward, W. J. Talbot, J. H. Tillman; Lieutenant Governor, C. L. Blease, J. T. Sloan, F. B. Gary; Attorney-

The candidate for Treasurer had no opposition. Mr. Gunter was chosen for Attorney-General and Mr. Martin for Superintendent of Education. For all the offices none received majorities, and a second primary was held in September to decide between the highest two in each case. In November the following votes were cast: For Governor, Heyward, 31,098; Lieutenant-Governor, Sloan, 30,256; Secretary of State, Gantt, 30,794; Attorney-General, Gunter, 30,937; Treasurer, Jennings, 30,653; Comptroller-General, Jones, 30,533; Superintendent of Education, Martin, 30,533; Adjutant and Inspector-General, Frost, 30,934; Railroad Commissioner, Caughman, 30,678. The proposed constitutional amendment was carried by a vote of 26,644 yeas to 1,905 nays. The highest vote was only about one-third of the total vote in the primary.

SOUTH DAKOTA, a Western State, admitted to the Union Nov. 2, 1889; area, 77,650 square miles. The population was 399,306 in 1890 and 401,570 in 1900. Capital, Pierre.

Government.—The following were the State officers in 1902: Governor, Charles N. Herreid; Lieutenant-Governor, George W. Snow; Secretary of State, O. C. Berg; Treasurer, John Schambler; Auditor, J. D. Reeves; Attorney-General, John L. Pyle, who died Feb. 22, and was succeeded by A. W. Burtt; Superintendent of Public Instruction, E. E. Collins; Commissioner of School and Public Lands, David Eastman; Adjutant-General, S. J. Conklin; Insurance Commissioner, H. C. Shofer; Public Examiner, Henry B. Mauch; Brown, 15,185; Buffalo, 17,060; Butte, 2,907; Campbell, 4,527; Charles Mix, 8,498; Clark, 6,942; Codington, 8,770; Custer, 7,275; Davidson, 7,483; Day, 12,254; Deuel, 6,656; Douglas, 5,012; Ed-ward, 4,916; Fall River, 3,541; Faulk, 3,547; Grant, 9,103; Gregory, 2,211; Hamlin, 5,045; Hard, 4,525; Hanson, 4,467; Hughes, 3,684; Hutchinson, 11,897; Hyde, 1,462; Jerauld, 12,241; Kandiyohi, 8,366; Lake, 9,317; Lawrence, 14,027; Luce, 9,386; McKenzie, 3,161; Minnehaha, 4,048; Marshall, 5,492; Meade, 4,907; Meyer, 20; Miner, 5,684; Minne-aha, 5,823; Moody, 1,114; Pennington, 5,610; Potter, 2,988; Roberts, 12,216; Sanborn, 4,494; Spink, 4,987; Stanley, 1,341; Sully, 1,715; Turner, 12,175; Union, 11,153; Walworth, 2,329; Yankton, 12,649; Cheyenne River Indian Reservation, 2,623; Pine Ridge Indian Reservation, 6,297; Rosebud Indian Reservation, 5,201; Standing Rock Indian Reservation (part of), 1,658; total, 401,570.

The census returns of bachelors and spinsters of twenty years and upward gives: Bachelors, 39, 704; spinsters, 13,425.

Finance.—The bonded debt of the State is $588,300. The rate of taxation is $3.20 on the $1,000. The State tax collections for the last quarter of 1902 were $149,623.58, exceeding those of the year before by $12,000.

The liabilities of all the counties at the close of the last fiscal year was $4,432,588, an increase of $121,659 in one year.

The assets and resources of all the counties, consisting of county property, unpaid taxes, and cash on hand, is $4,939,462—an increase of $63,492 in one year.

The expenditures of all the counties for the year amounted to $3,766,655, an expenditure of $218, 609 greater than that of the previous year.

Valuations.—The total valuation of the State, as listed by the Board of Assessment and Equalization, is $187,531,381, which is an increase of $14, 324,648 over the final returns of 1901.

This is said to be much too low; a law passed some years ago restrains the Board of Equalization from raising the valuations beyond a certain amount over the county returns. Consequently, the revenues are insufficient to meet the growing needs of the State.

The assessment rolls show the acreage of real estate listed for assessment to be 19,247,748 acres, an increase from 1901 of 244,276 acres. The valuation of this is placed at $111,311,904, an increase of $10,777,584. The average returned price per acre is $3.78, an increase of 50 cents. The valuation of town lots is returned at $19,093,064, an increase of $1,700,858.

A total of 1,218,297 cattle were returned for assessment, an increase of 139,034, with a valuation of $15,767,412, an increase of $862,814. There is an increase of 27,737 in the number of horses returned, making the total 374,361, with a valuation of $7,677,778, an increase of $116,394. The number of sheep returned shows an increase of 61,700, making a total return of 900,663, with a valuation of $1,053,982, an increase of $37,856. The number of hogs returned is 311,980, an increase of 83,123. The value is given at $644,596, an increase of $115,438.

Education.—The number of illiterates in the State in 1900 was 14,832. In the percentage of children from ten to fourteen able to read and write, South Dakota stood eighteenth in the list, with 99 per cent.

The December apportionment of the interest and income fund to the schools of the State from the officer of the Commissioner of School and Public Lands was $70,288.04, or 54 cents per capita on the school population. The June apportionment was a total of $270,923.45, or a per capita of $2.54.

The State has a large surplus of school moneys lying idle, which under the law can only be invested in certain bonds.

In the past two years 129 new country schools have been built. For the year ending June 30 the average wages of male teachers in rural schools was $36.07, against $34.70 in 1901, and the average for the female teacher in the rural schools was $32.31, against $31.17 the year before.

The Aberdeen Normal School had an enrolment
of 61 Sept. 25. The dedication exercises were set for Oct. 23.

The attendance at the Agricultural College, at Brookings, in the year ending in June was 600, having grown to that number from 150 six years ago.

Yankton College had an attendance of 286, excluding duplicates in departments, as follows: College, 54; academy, 117; conservatory of music, 103; art, 29; elocation, 30; shorthand, 15; domestic science, 9. At the twentieth annual commencement, in June, the graduates in the various courses were: College, 7; academy, 17; music, 1; elocation, 3; physical training, 7; shorthand, 2.

A bust of Dr. D. K. Pearson, of Chicago, whose last gift to the college was $50,000, was unveiled. In 1901-02 the college received $22,000, mostly from Eastern friends for permanent improvement and endowment. Of this, about $18,000 is being put into a gymnasium and athletic field. The total assets of the institution are now $280,000.

Charities and Corrections.—The buildings of the public institutions are in general overcrowded. At the insane hospital there were 570 patients in October, while the building can not well accommodate more than 300. The same statement holds for the State Hospital in the past ten years. It has built two cottages, the power-house, and the large rear center building, which was completed last year. But with one exception not one increase has been made in the number of rooms for the patients. The institution at Redfield for the feeble-minded, which was opened in 1901, is likewise inadequate for the accommodation of all the applicants.

There is a movement to separate the boys' and girls' department of the Reform School, at Plankinton, and placing the girls in charge of women exclusively.

The report of the State Penitentiary in November gave the number of convicts, June 30, as 160. The year ending June 30, 1900, there were 134. The per capita cost of maintenance for 1901-02 was $215.35, against $267.11 the previous year.

Industries and Products.—The Census Bulletin on South Dakota shows that in the census year, 1900, there were 62,622 farms in the State, valued at $220,133,190, and covering an area of 19,070,510 acres, or about 39 per cent. of the total area. The live stock held on the farms is valued at $12,218,650, making the total value of farm property for the State $297,595,302.

An estimate of the crops of 1902 gives, for wheat, 38,000,000 bushels; oats, 20,000,000 bushels; flax, 9,000,000 bushels; corn, 40,000,000 bushels.

Articles of incorporation were filed in August at Pierre of the Farmers' National Cooperative Exchange Company with a capital of $50,000,000. The purpose of the corporation is to buy, sell, and deal in grain, provisions, live stock, and all kinds of produce, on commission and otherwise, and for the purpose build and equip grain-elevators, warehouses, cold-storage plants, stock-yards, and whatever may be necessary to carry on the business of the corporation.

The value of the manufactured products of the State was given in the census year as $12,000,000. The gold produced in 1901 was valued at $6,479,500, and the silver at $46,800. The preliminary estimate for 1902 was: Gold, $7,298,057; silver, $1,522,672.

It was reported, Dec. 31, that one of the richest gold discoveries made in Custer County of recent years has just been made on the Roosevelt group of the Grantz Gold-Mining Company, 8 miles from Custer. It was in an old shaft, started several years ago, abandoned by the former owners, and recently cleaned out and explored. A drift of a few feet from the shaft encountered quartz liberally sprinkled with free gold.

Oil has been discovered 30 miles from Sisseton, and preparations are making for establishing works there. A discovery of natural gas is reported near Aberdeen.

The fees of the department of the Secretary of State for 1902 amounted to $22,408. Of the amount $17,119 was paid for charters of domestic corporations: $907.20 for foreign corporations: $853.90 by banks; $1,160 by notaries; and the remainder was miscellaneous fees.

Insurance.—The statistics of 1901 show the following figures: Fire-insurance, premiums received, $519,923.60; losses paid, $235,249.57; losses paid out, $235,611.92; accident insurance, receipts, $31,051.81; losses, $31,201.27; South Dakota Mutual Fire Companies, premiums received, $144,548.94; losses paid, $55,576.20.

The commissioner says in his annual report: "The statistics for the past thirteen years show that an average of 49.4 per cent. of the premium receipts of the fire companies collected in this State has been sufficient to pay all losses sustained, and that for the past year but 44.9 per cent. was required for losses. This is premium receipts alone, and does not include receipts from other sources, such as interest from invested funds.

Lands.—The wooded area of the State is 2,500 square miles. The Land Commissioner recommends that the herd law, which prevails on the eastern side of the river, should be extended over the State, thus covering the cattle country west of the river where the free range has been in vogue. He takes the position that all the State lands are being used for grazing. He says that the State is the owner of 1,088,940 acres of common school and endowment lands in the free-range section of the State. On the other hand, stockmen argue that the adoption of the herd law would result in disaster, not only to the cattle industry west of the river, but to the interests of the State as well. They call attention to the fact that the western part of the State is entirely a stock country, excepting small tracts that may be irrigated and farmed. They say that to cut off the free-range privileges and compel stockmen to herd would practically wipe out the cattle industry.

Political.—For the State and congressional election in November 4 tickets were filed—Republican, Democratic, Prohibition, and Socialist. The platform adopted at the Republican Convention, June 4, approves the national administration, favors the settlement of disputes between capital and labor by arbitration, alludes to the good faith of the Union, and for the independence, rejoices over the pacification of the Philippine Islands, denounces partisan attacks upon the behavior of the United States soldiers, and highly commends the State Government and the Representatives of the State in Congress.

The Democratic and Populist Convention, June 25, reached an agreement upon fusion and united upon a platform to be known as the Populist. The platform reaffirms the principles of the Kansas City platform, denounces the Fowler currency bill and the workings of the so-called text-book trust in the State, denounces the recent legislation for the change in the Australian ballot law limiting the number of parties represented
on the ballot, denounces the Legislature for the
repeal of the law allowing each county commis-
sioner district to elect its own members, favors
Government control of the railroads and public
utilities, and favors the election of United States
Senators by direct vote of the people.

The nominations for the State offices are given
below in the same order of parties as above:
For Governor, Charles N. Herreid, John W. Mar-
For Lieutenant-Governor, George W. Snow, Ev-
erett Smith, W. J. Edgar, Erik Shakstad.
For Secretary of State, O. C. Berg, Edward S.
Ashley, G. H. Brown, Clarence Brothers.
For State Auditor, J. F. Halliday, Thomas W.
Taubman, A. H. Tasker, G. Frank Walker.
For State Treasurer, C. B. Collins, Louis Chia-
dek, Knute Lewis, A. E. Clark.
For Commissioner of School and Public Lands,
T. Pierce.
For Railroad Commissioner, D. H. Smith, Hiram
B. Rowe, H. W. Reinecke, E. B. Case.
For Attorney-General and Superintendent of
Public Instruction there were no Prohibition can-
didates on the ticket.
For Attorney-General, Philo Hall, William A.
For Superintendent of Public Instruction, Geo-

THE REPUBLICAN CANDIDATES WERE ELECTED.
The Republican candidates were elected. The
vote for Governor stood: Herreid, Republican, 48,
186; Martin, Democrat, 21,396; Curtis, Prohibi-
tionist, 6,268.

TENNESSEE, a Southern State, admitted to the
Union, June 1, 1796; area, 42,050 square miles.
The population, according to each decen-
nial census since admission, was 105,620 in 1800;
261,727 in 1810; 422,771 in 1820; 681,904 in 1830;
829,210 in 1840; 1,002,717 in 1850; 1,109,801 in
1860; 1,258,520 in 1870; 1,542,369 in 1880; 1,767;
519 in 1890; and 2,029,616 in 1900. Capital, Nash-
ville.

GOVERNMENT.—The following were the State
officers in 1902: Governor, Benton McMillin; Secre-
tary of State, John W. Morton; Treasurer, Horace
F. Folk; Comptroller, Theodore F. King; Superinten-
dent of Agriculture, Thomas H. Paine; Superinten-
dent of Instruction, Morgan C. Fitz-
patrick; Adjutant-General, W. M. Brandon; At

corney-General, D. W. Snell; Commissioner of Labor,
Robert A. Shiflett; Ag. Stock Commissioner, Martin
J. Noonan; Railroad Commissioners, W. B. Bap-
tist, J. N. M. Benson, and Thomas L. Williams;
Prison Commissioners, W. M. Nixon, W. A. Car-
ter, and John S. Denton, who succeeded A. J.
McWhirter; Librarian, Jennie Landerdale; Chief
Justice of the Supreme Court, David L. Snod-
grass; Associate Justices, W. C. Caldwell, John
Wilkes, W. K. McAllister, W. D. Beard; Clerk,
A. W. McMillin; Justices of the Court of Chan-
ce, Appeals, M. M. Neil, S. F. Wilson, R. M.
Barton, Jr.; Clerk, James Turney. All are Demo-
crats.

State elections are held biennially in November of
the even-numbered years. The Legislature meets biennially in January of the odd-numbered years.

EDUCATION.—The condition of education re-
cemed more than usual attention in 1902. With
a school population of 753,198, the number of pupils enrolled in the State was 488,655, and the
average daily attendance, for the average school
term of ten months, was 250,000. The average yearly salary of the country public teachers
was $133. Both political parties have pro-
posed reforms that will put more pupils into the
schools, and for equalization in the year. It is
proposed to increase the permanent school fund,
which is the same now that it was thirty years
ago, by increasing the State levy for school pur-
poses from 15 to 25 cents on the $100, and by
legislation that will permit school districts to
levy special school taxes, also by forcing into
the schools all children who should attend by
some form of a compulsory school law. The
need for the special training of primary teachers
is felt particularly. The Peabody College for
Teachers and the summer institutes and schools
are exerting a helpful influence, but the demand
is greater than they can meet with their present
limited resources.

INDUSTRIES.—According to the last census re-
ports by W. H. Wiley, chief of the bureau of
chemistry of the Department of Agriculture, Ten-
nessee takes eleventh place in the aggregate value
of the flour produced, the number of barrels
being 3,512,985, and their value $13,229,009.
Tennessee has 337 establishments handling 10,546,155
bushels of wheat, valued at $11,778,886. Ten-
nessee takes a higher rank in the excellence of
the flour made. In this list its flour was graded at
$3.76, the average value being given at $3.39.
Tennessee is shown by the last census returns
to rank ninth in the lumber industry, its product
being larger than that of any Southern State except
Arkansas. The value of the product is given as
$18,000,000.

The largest iron blast-furnace in the South was
put in blast at La Follette by the La Follette
Coal, Iron, and Railway Company in April. It
will have a daily capacity of 250 to 400 tons of
pig-iron, and is expected to result in a large and
rapid growth for that section of East Tennessee.

The census report on printing and publishing
gives Tennessee the highest position among
Southern States in this department of industry.
The aggregate circulation of the Tennessee publica-
tions per issue is 3,121,017. Tennessee out-
ranks 40 States by 500,000 to 3,000,000. Only 7
States outrank Tennessee. Tennessee had 251
newspapers and periodicals, classified as follows:
16 daily, 6 semimonthly, 187 weekly, 26 monthly,
and 10 quarterly.

AGRICULTURE.—The committee of agricultural
experts appointed to make a report to the Nash-
ville Chamber of Commerce on a State fair did
so on April 18. Its description of the agricultural
situation was startling and pessimistic. It com-
pared the yield of grain in 1898 and 1899 with
1875, 1880, and 1890, showing that in these years
respectively the yield of corn was 41,343,614, 63,635,350,
and 59,967,760; that of wheat, 6,186,916, 8,300,
789, 8,292,727; of oats, 4,513,315, 8,775,914,
5,326,244; of barley, 75,068, 63,368, 19,539. For
the same decades the yield in the number of
horses was 247,254, 331,842, 308,073; of mules,
102,983, 203,530, 139,163; of cattle, 643,609,
965,339, 529,325; of hogs, 1,829,690, 1,922,912,
1,750,154; of sheep, 826,783, 54,996, 251,735. The
report shows also that since 1900 there has been
a loss on every item, and a material loss on all
except horses. It says: "The growing of small
fruits and truck-farming have been successfully
developed, and certain localities and individuals
here and there have increased the yield of their
fields and maintained the high standard of their
studs, herds, and flocks; but, on the whole, Ten-
nessee, from an agricultural standpoint, has made
no substantial progress since 1875." Another fact
brought out is that for the decade 1890–1900 the
increase in the population of the State outside of the cities and incorporated
towns is but 157,103, and from this, the report has been made that at least 61,500 in certain counties where mines, etc., have been opened, leaving 96,113, which increase, it says, is undoubtedly domiciled for the most part in villages and towns unincorporated, or in the suburbs of cities and incorporated towns. It shows that of the 10,000 increase in Davidson County, for example, outside of Nashville, perhaps fully 6,000 are suburban residents. It recommends the establishment of an annual State fair as a remedy for the present agricultural depression.

According to the report issued by the Census Bureau on July 7, in the farms of Tennessee, June 1, 1900, numbered 224,623, and were valued at $285,150,750. The value of farm implements and machinery on the same date was $15,523,670, and of live stock $60,530,756. The yield of the mending of farms makes the total value of farm property $341,202,025. The total value of farm products for 1899 was $106,164,440. It is approximately twice that for 1898, but a part of this increase is doubtless due to a more detailed enumeration in 1900 than in 1899. The total land area in Tennessee is 41,750 square miles, of which 76.1 per cent. is included in farms. The increase in the total value of farm products since 1890 was $28,310,375, or 9 per cent.; the increase in the value of land improvements and buildings was $22,450,210, or 8.9 per cent.; in that of implements and machinery, $9,250,190, or 32.3 per cent.; and in that of live stock, $54,375, or 0.9 per cent. All counties reported an increase in the number of farms in the last decade, and nearly two-thirds of the counties reported an increase in total farm area. The average size of farms varies from 54.8 acres in Shelby County to 182.1 in Fentress County. As a rule, the counties with the largest farms report the smallest farms. Nearly 85 per cent. of the farms are worked by white farmers; 15.1 per cent. by colored farmers. Of the white farmers, 94.4 per cent. own all or part of the farms they operate, and 25.6 per cent. operate farms owned by others. For colored farmers the corresponding percentages are 25.8 and 72.5.

Commerce.—In the history of the Merchants’ Trust Company of St. Louis made an arrangement by which it undertook to finance the Tennessee Central Railroad. The mortgage is dated July 1, 1895, and secures a fifty-year 5-per cent. gold bonds, coupons payable January and July, bonds being redeemable at 5 per cent. premium on and after July 1, 1907, at the option of the company. The bonds to be immediately issued amount to $5,000,000, sufficient to cover the lines already completed at the rate of $52,000 a mile. The Tennessee Central operates now from Lebanon to Emory Gap, 127 miles. The object of the line is to develop the 400,000 acres of coal land in the Lebanon region.

Insurance.—The report of the State Insurance Commissioner shows that the receipts from reported companies up to Dec. 31, 1901, amounted to $2,502,736, and the losses to $1,823,442. Thirteen companies withdrew from the State during the year and no reports were had from them. There were also three companies from which there had been no statement. The commissioner estimates the total receipts at $2,575,000, and the losses at $2,000,000.

Forestry.—The Tennessee Forest Association, which held its first annual meeting in November, 1900, has rapidly attained an important position, numbering among its members over 100 of the foremost citizens of the State. It has already done something to arrest deforestation by disseminating informa-

respecting the growth, protection, and utilization of forest resources by means of reforestation from forest destruction. It held its second annual meeting at Monticello on July 21. The papers read on the occasion have still further stimulated the interest in the movement throughout the State.

Prisons.—The State Board of Prison Commissioners submitted to the Governor on Jan. 30 their report for the fiscal year ending Dec. 1, 1901. It covered every department of prison affairs and gave minute items of expenses and receipts. During the year the net profits of the main prison were $2,764.10; the net profits of the Brushy mountain mines, $100,970.75. The balance in treasury from the main prison, $40,223.94; the balance in treasury from the Brushy mountain mines, $1,235.94. The total net balance was $123,362.45. It was shown by a comparison with the years 1899 and 1900 that the earnings of the main prison for 1901 were $90,753.19, more than in the latter; and that the earnings of the Brushy mountain mine were $16,359.73 more than in 1899, and $7,443.24 less than in 1900. The net balance of cash deposits by the main prison for 1901 was $29,473.30 more than in 1899 and $17,242.81 more than in 1900. The net balance of cash deposits by the Brushy mountain mine for 1901 was $9,974.31 more than for 1900 and $917.03 less than for 1900. The decreased profits from 1900 shown in the operation of the Brushy mountain mines may be accounted for by the fact that, while the output of coke in 1900 was 40,714.95 tons, in 1901 it was 50,067.01 tons. The reduction in profits for 1901 by reason of the decreased market price of coke alone was $3,570.35. The average price received for coke in 1900 was $8.60 per ton; in 1901, $7.60. While the average selling price of coke in 1900 was $8.829, while in 1901 it was $7.60. The difference in the profits on coke for the two years was $1.04. The difference in the output of 50,067.01 tons is the amount above stated, $52,570.35.

Mining Disaster.—The worst disaster in the history of the state occurred on April 19, 1901, when 220 men and boys met an instant death at the Fratesville coal-mine, 2 miles west of Coal Creek, as the result of a gas explosion. It was of such suddenness that the calamity was due to negligence.

Fruit-Storms.—The most destructive fruit-storms that had occurred for years took place in the central and southern portions of Middle Tennessee on March 29, doing enormous damage to railroad and other property. Small streams rose rapidly to heights they had never attained before. In Giles County a general opinion that the calamity was due to negligence.

Legal Decisions.—On May 27, Judge Clark of the United States Circuit Court, Knoxville, handed down an opinion in the case of Rigsbee, Novo & Smith, of Rogersville, Tennessee, Virginia-Carolina Chemical Company et al., in which he holds that the plaintiffs' claim for damages from the defendant, to the amount of $3,000, was not sustained. The ground of the main defendant company was that a combination in this and other States in the fertilizer business, is not well founded. He held...
that chapter cxxviii, Tennessee Acts of 1891, and chapter cxxv, Tennessee Acts of 1897, on which the suit is predicated, have been repealed; also, that these repealed laws, which constitute the Tennessee antitrust legislation, are in contravention of the Federal Constitution and void, because they interfere with commerce between the States mentioned. Judge Clark says that had the suit been brought on the Sherman antitrust law, he would have passed upon it.

The Supreme Court handed down a decision, March 7, on the test case of Benedict Brothers vs. Davidson County et al., in which suit was involved the taxation of sawlogs and lumber made from logs that were the product of the soil of Tennessee. The case was decided in favor of the plaintiffs, with right to recover. The suit involved the question of taxation of millions of dollars' worth of property which had heretofore been exempt. The opinion was delivered by Justice Wilkes; Judge Beard offered a dissenting opinion.

James McAllister rendered a decision on Feb. 13 in a suit that had an interest for organized labor throughout the State. The State Comptroller, acting under the advice of the Attorney-General, had claimed for the first year's salary of M. J. Noonan, State Shop and Factory Inspector, on the ground that while the amended act of the last General Assembly appeared to apply to him as at a salary of $1,200, payable monthly, instead of fees to be paid by the factories inspected, no provision had been made in the appropriation bill for the purpose. The Supreme Court held that the act of 1901 placing the inspector on a salary amounted in law to an “appropriation,” as this term is used in the Constitution of the State, and that the law that fixed the salary fixed the manner of payment and the time. The Supreme Court affirmed the ruling of the lower court, which had sustained the contention of the inspector. As the laboring classes regarded the duties performed by the inspector as essential to the welfare of those working in shops and factories, they attached much significance to the decision.

Proposed Constitutional Changes.—During the last session of the Legislature several bills and resolutions were passed to amend the State Constitution. These proposed amendments provide for electing the Secretary of State, Treasurer, and Comptroller by the people for four years; for local road, fence, and stock laws; for preventing municipalities from incurring indebtedness exceeding 10 per cent. of the value of taxable property; for special assessments on parts of property for local improvements; for exemption of new industries from taxation for a period of not exceeding ten years; for election of the Governor for a term of four years instead of two, as at present; and for an increase of the terms of sheriff, trustee, and register to four years, but making them ineligible to a second term immediately succeeding the first.

The platform approved "the principles of the platform at the last national convention of the Democratic party"; condemned the Republican policy in the Philippines; declared against an increased standing army, favoring State militia; denounced Republican extravagance; supported the construction of the Nicaragua Canal; expressed sympathy for the Boers; favored liberal commercial relations with Cuba; approved Gov. McMillin's administration; approved the public-school system and the textbook law; called for the establishment of good roads; declared in favor of holding a State fair, and of the Legislature setting apart an adequate sum for the purpose; demanded a revision of the State laws on the inspection of coal-mines and factories to afford better protection for the laboring classes.

The Republican State Convention met in June and nominated Judge H. T. Campbell for Governor and J. J. Elliott for Railroad Commissioner. The platform approved the measures inaugurated by the national Republican party, through President McKinley, and being carried out by President Roosevelt, together with the policies, touching both home and foreign affairs, that attacked the Democratic administration of State affairs, and demanded such changes and reforms as would be in harmony with true republican principles; insisted on the adoption of a revision of the election laws on a plan which it suggested, and on the improvement of the public-school system; declared for extending the operation of the 4-mile law to towns having 5,000 inhabitants; and favored the adoption of several amendments to the Constitution.

All the Democratic nominees were elected in November. The canvass resulted in 108,132 votes for Governor, 100,149, which was 22,235 less than in 1898. The vote for Governor was as follows: J. B. Frazier, Democrat, 98,384; H. T. Campbell, Republican, 59,002; R. S. Cheves, Prohibitionist, 2,193.

Texas, a Southern State, admitted to the Union Dec. 29, 1845; area, 265,780 square miles. The population, according to each decennial census since admission, was 212,592 in 1860; 604,215 in 1870; 818,759 in 1880; 1,591,749 in 1890; 2,235,523 in 1890; and 3,048,710 in 1900. Capital, Austin.

Government.—The following were the officers of the State for the year: Governor, Joseph D. Sayers; Lieutenant-Governor, J. N. Browning; Secretary of State, John G. Todd, appointed by the Governor; Treasurer, J. W. Robbins; Comptroller, R. M. Love; Superintendent of Public Instruction, Arthur Lefever; Commissioner of Agriculture, Jefferson Johnson; Railroad Commissioner, L. J. Storey; Adjutant-General, Thomas Scourry; Commissioner of the General Land Office, Charles Rogan; Attorney-General, C. K. Bell; Chief Justice of the Supreme Court, Reuben R. Gaines; Associate Justice, Thomas J. Brown and F. A. Williams; Clerk, Charles S. Morse—all Democrats.

The term of State officers is two years. They are elected on the Tuesday after the first Monday in November of the even-numbered years. The Legislature meets biennially on the first Tuesday of the odd-numbered years. The session may continue indefinitely, but the members receive $5 per diem for the first sixty days, after that $2 per diem. There are 31 Senators elected for four years, and 128 members of the House of Assembly, elected for two years.

Finance.—The Legislative Investigating Committee compiled the following report on the State treasury on April 26. The amount of bonds was found to be $11,119,236.40, classified as follows: To the credit of the permanent school fund, State bonds, $2,108,018; trust fund, $4,458,772; county, 10,569,273.35; city, $970,387.55; independence
ent school district, $93,500. To the credit of the permanent university fund, State bonds, $579,700; to the credit of the Blind Asylum land sales account, State bonds, $115,500; to the credit of the Deaf and Dumb Institute land sales account, State bonds, $61,000; to the credit of the Lunatic Asylum sales account, State bonds, $111,700; to the credit of the Agricultural and Mechanical College fund, State bonds, $209,000; to the credit of the Orphan Asylum land sales account, State bonds, $11,200; special loan tax certificates of public debt, $194,408.50; escheated estates notes, $1,079,409.

Valuation.—The totals of the taxable real and personal property in Texas, reported by the Comptroller, Nov. 12, showed a decrease in live-stock values, but an increase in implements, machinery, tools, money, and credits. Of the land, 139,940,030 acres were valued at $435,215,410, an increase of 3,238,761 acres, valued at $14,801,809; town and city lots, $210,103,161, an increase of $11,273,226; 1,555,872 horses and mules, $38,028, 646, an increase of 21,362 head, decrease $1,555,994 in value; 5,757,300 cattle, $74,228,486, increase 689,493 head, decrease $339,847 in value; 14,449 jack and jennies, $469,631, an increase of 231 head, decrease $7,009 in value; 1,521,834 sheep, $2,071,297, increase 16,407 head, decrease $34,567 in value; 659,132 goats, $458,172 in value; 4,965 head and $6,137 in value; 1,014,315 hogs, $1,608,593, decrease 364,161 head and $850,304 in value; 28,808 dogs, $183,348, decrease 14,044 head, increase $119,242 in value; 10,681 miles, $7,227,725, increase 640 miles and $3,276,600, rolling-stock of railroads, $10,389,233, increase $383,374; city-street railways, 255 miles, $1,346,401, increase 50 miles and $290,268 in value; 8,117 telegraph and telephone lines, 23,800 miles, $2,509,365, decrease 3,933 miles, decrease $71,289 in value; steam, sailing, and other vessels, 200, $365,300, increase 5 and decrease $35,225 in value.

Banking.—In December there were 345 national banks in operation in the State. Outside of the reserve cities, Dallas and Houston, the total capital was $253,100,280; surplus, $6,164,032.95; individual deposits, $65,606,686.96. For Dallas and Houston the principal items were: Dallas—capital, $4,050,000; surplus, $1,061,000; individual deposits, $4,173,000; National Bank deposits, $82,161,634; State and private banks, $340,018; United States deposits, $884,579. Houston—capital, $1,450,000; surplus, $850,000; individual deposits, $3,538,660; National Bank deposits, $1,965,386; State and private banks, $685,541; United States deposits, $100,000. The banks of Texas are in an exceptionally good condition.

Education.—The Treasurer's report showed that the school fund aggregated $40,283,330.54. This amount represents notes, obligations, and other securities purchased, resulting from the sale of 21,905,906 acres of its select and choicest land, including its timber, of which 14,694,426 acres have been sold since the act of 1885 became law. There are still unsold 22,080,525 acres, but most of it is in the extreme western part of the State, and on the Rio Grande, where, from excessive droughts, the lack of water, or the general topography of the country, the land may never become valuable. As great is as the demand for land for grazing, there are about 7,500,000 acres lying idle.

The remedies proposed by the State Land Commissioner in his biennial report, filed in November, would reduce the divide between $2 an acre, except for watered land, and raise that to $3 an acre; to sell no land except at public outcry, and then only to actual settlers; and to sell no land below the minimum price fixed by law, and none unless a certain number of bidders are present.

The attendance of students at the opening of the State Agricultural College, in Bryan, at the opening, Sept. 10, was the largest known in the history of the institution. The work on the new chemical and veterinary laboratory was finished, and the building was ready for occupancy Oct. 1.

The summer session of the University of Texas in Austin, closed July 26, and was the most successful ever conducted. The number of students enrolled was 222.

The Penitentiary.—The records of the State Penitentiary, Sept. 25, showed the number of convicts that were killed in the past few years while attempting to escape. In 1901 the number was 15. During the term of Gov. Culberson, who preceded Gov. Sayers, the number was 37, and during the three terms before him the number was 88.

Agriculture.—The bulletin issued by the United States Census Bureau, July 7, showed that the farms of Texas in 1900 numbered 352,190 and were valued at $691,773,013. Of this amount 14.5 per cent. represents the value of buildings, and 85.5 per cent. the value of the land and improvements other than buildings. The total value of farm products for 1899 was $230,823,674, of which amount 30.4 per cent. represents the value of animal products, and 69.6 per cent. the value of crops. The value of other than farm products, cut or produced on farms. The total acreage of farm land has increased rapidly, being twice as great in 1900 as in 1890.

The value of live stock on farms and ranges, June 1, 1900, was $242,162,935, or 25 per cent. of the total value of farm property. Of this amount 59.5 per cent. represents the value of meat cattle other than calves, $93,830,208; 14.3 per cent. of cows, 10.4 per cent. that of mules, 8.3 per cent. of dairy cows, 3.2 per cent. of swine, 1.7 per cent. of sheep, 1.5 per cent. of goats, and 1.1 per cent. of all other live stock.

The Boll-Weevil.—The ravages caused by the boll-weevil, especially in the last two months of the year, were so disastrous that the United States Secretary of Agriculture was of opinion it must be necessary, in the work of exterminating the insect to plant other crops. By this the world's cotton market would be materially affected. A report issued by the vice-president of the Santa Fe Railway estimated the cotton-crop along the Santa Fe and the International and Great Northern at 40 per cent. less than last season. The boll-weevil was responsible for $538,666; 14.3 per cent. that of horses, 10.4 per cent. that of mules, 8.3 per cent. that of dairy cows, 3.2 per cent. that of swine, 1.7 per cent. that of sheep, 1.5 per cent. that of poultry, and 1.1 per cent. that of all other live stock.

Though still confined to Texas, says the report, the territory occupied by the cotton boll-weevil includes about 28 per cent. of the cotton acres in the United States. This acreage in 1900 produced 34 per cent. of the total crop of this country, or one-fourth of the crop of the world for the year.

This region is bounded on the north by the Red river and on the east by the pine forests, and separates the Trinity and Sabine rivers. It includes the 22 counties which, in 1899, according to the twelfth census, produced 40,000 bales of cotton more each. A conservative statement would place the loss that the insect caused to Texas in 1902 at $10,000,000.
It is wholly beyond possibility that the weevil is not a pest. It has infested Arizona and since reaching Texas, as well as the history of many related injurious insects, offers no hope that it will ever be much less destructive than now. Notwithstanding, it is believed that cotton can be grown profitably by means of a few expedients in planting and managing the crop where the insect is present.

During the season, the division of entomology was engaged in field experiments to demonstrate that cotton can be produced successfully in spite of the boll-weevil. Some of this work was conducted under the guidance of Col. E. S. Peters, in the Brazos valley, near Calvert. This valley is, on account of its low and moist situation, the presence of timber, and the almost exclusive production, a most favorable variety for the cotton weevil. The experiments involved the following:

1. Early planted cotton, with a thorough cultivation, produced two-thirds of a bale per acre;
2. Early planted cotton, with careless cultivation, produced one-ninth of a bale per acre;
3. Early planted cotton, with fair cultivation, produced one-half of a bale per acre;
4. Late planted cotton, with wide rows, produced about one-fourth of a bale per acre;
5. Late planted cotton, with narrow rows, sprayed thoroughly, yielded about one-fourth of a bale per acre.

In a report submitted by Congressmen Slayden, Dec. 17, to the committee on Agriculture, the loss due to the boll-weevil in 1902 was placed approximately at 500,000 bales, with about $25,000,000. This report was based on information gathered by the managers of the several Texas railroads that run through the infested section. The entomologist of the Texas State Agricultural College, Fig. 17, the report of the University of Texas, Dec. 17, stated that the acreage was very small in the State, and that the yield was low.

The Oil-Fields.—The report of the United States Geological Survey, Oct. 25, states that the Spindle Top oil-rock contains about one-fourth of its volume in oil. At an estimate of 1 barrel obtained for every 26 cubic feet for Spindle Top, and a little less for other fields, there should be a yield equal to Baku, in Russia, and a much greater output than that at any other American field. The report says that the apparent quantity of illuminating oil may be increased by methods that have examined the facts that the Gulf Coast petroleum is unsuited to the production of illuminating oil, and that it is doubtful if it can be made to yield gas of high quality. Its value as a source of asphalt and gas oil is as yet undetermined. Experiments seem to establish both its availability and its economy as a generator of steam. The oil output of the average daily flow of 162 wells now operating on Spindle Top is not to exceed 12,000 barrels.

The oil industry of South Texas was greatly advanced by the discovery of several points outside of Spindle Top. The steel, earth, and wooden storage at Spindle Top, Jan. 1, 1903, was 13,253,000 barrels. The oil in storage Dec. 1, 1902, was 8,470,000 barrels. The oil in storage Jan. 1, 1903, was 8,470,000 barrels.

Legal Decisions.—On May 26 the Supreme Court decided the case of the State of Texas v. the Houston and Texas Central Railway Company et al., from Travis. This was a suit instituted to recover 170,880 acres in Lipscomb County, located and surveyed by virtue of certificates issued to the railroad company under several acts granting 16 sections of land to any railroad company for every mile of road constructed and operated. The lands were granted the railroad company for miles of sildings constructed, and not main line. However, the recovery was sought on these grounds: First, that at the time the sections of railroad were completed for which the certificates were issued the law which authorized a grant of lands to railroad companies was thereafter amended by its own limitation and had also been repealed by the Constitution of 1869; second, that the certificates by virtue of which the land in controversy were located were issued for side-tracks, and that the law did not authorize the issue of certificates for sidings; and third, that if the grants were valid the title thereto had been forfeited by failure of the company to continue them within the time prescribed by the statute which authorized the grant. The court decided in favor of the company. Had it decided otherwise, the titles to 10,000,000 acres would have been placed in jeopardy, but as it is they are safe, and innocent third parties, who purchased the lands, will not suffer.

A decree rendered by the Court of Appeals, Nov. 19, was of special importance on account of the effect it must have on many other suits filed by the Attorney-General to recover land held by virtue of Mexican land grants, by the University of Texas, Dec. 17, stated that the acreage was very small in the State, and that the yield was low.

Confederate Reunion.—About 12,000 Confederate veterans held their annual reunion in Dallas on April 23. Gen. Gordon, commander-in-chief, called the convention to order. Among the resolutions adopted was one withdrawing the support of the Confederate veterans from the university because of an alleged disparaging article by a professor of that institution on Southern women. Another called for the preparation of school histories that would dwell on the Southern leader.
Davis monument fund showed that there was $34,000 on hand, but $10,000 more was needed. A proposal to change the Confederate Memorial Day from June 3, the birthday of Jefferson Davis, failed, but a resolution was passed allowing any State desiring a different date to take individual action. The Credentials Committee reported that 707 camps had paid their per capita tax, and were entitled to 2,252 votes, while 748 camps were reported in arrears. The report of the Committee on Battle Abbey showed that of the $200,000 necessary for the reconstruction of the museum the treasury has now $176,063. Gen. Gordon was reelected commander-in-chief. About 150,000 persons attended the reunion from all parts of the South. New Orleans was chosen as the next meeting-place.

Change of Boundaries.—On Dec. 6 a report was filed in the State Land Office describing the work done under the act of Congress of 1901 requiring the Secretary of the Interior to establish the northern boundaries of Texas from the Red river, in Childress County, north to and including Lipscomb County. It was first understood that the line was to run 25 miles of Oklahoma; but the report fixes the meridian so that Texas loses a strip of land three-fourths of a mile wide, taking off that much of the eastern edge of Lipscomb, Hemphill, Wheeler, Collingsworth, and Childress Counties, a total loss of 1127 sections or 7,200 acres, which has always been regarded as part of Texas.

The condition prevailing on the west side of the State, the entire length of the Panhandle, United States surveyors having fixed the one hundred and third meridian, which forms the western boundary of Texas, so that a strip of 3 miles is taken from all the northern counties, making a total of about 300,000 acres.

New Mexico also disputes the boundary-line extending from the westernmost point of Texas east along the northern edge of El Paso, Reeves, Loving, and Winkie Counties, to the point where it turns north, it then being in the 3-mile controversy.

Lawlessness.—On March 7 a party of whites went at night to the home of Nathan Bird, a negro farmer living near Prairie Lea, and demanded his son, but were refused. The son was accused of having beaten a white boy and broken his arm. The boy was shot and instantly killed the father. They carried away the son, and are believed to have killed him, as no trace of the boy has since been found.

At Hemstead, Oct. 21, 2 negroes, Reddick Barton and Jim Wesley, were tried for criminal assault and murder, convicted and sentenced to death. The people were unwilling to wait for the delay of thirty days prescribed by law to take place between the sentence and its execution. They seized one prisoner in the court, the other in the jail and hanged them from the arm of a telegraph-pole in the public square.

A negro named Dudley Morgan was burned alive at the stake at Lansing, May 22. When it was learned that he was on the train being brought to Lansing to be identified by the woman he had assaulted, about 200 men, armed with Winchester rifles, surrounded the train as it entered the city, seized the man, and conducted him to the spot where the execution was to take place. Morgan confessed having committed the crime, and after he was chained to the rail with his hands and legs from the rear, the mob began to take ties from a fire already started and burn out his eyes, and held the red-hot and burning timbers to his neck, burning his clothes off and other parts of his body. Then the body was tortured until death came to his relief, the crowd all the while crying "Let him die slow." A large number of women from all parts of the surrounding country were present at the spectacle.

Disasters.—On March 7 the Southern Pacific train No. 9 went into a ditch 25 miles west of Sanderson. The wreck took fire and 12 persons were consumed by the flames before aid could reach them, and 29 were injured, many of whom died. The wreck occurred in the middle of the night.

Several fires occurred at Dallas after 3 o'clock in the morning, April 22. Two men were fatally injured. The Dorsey Printing Company, one of the largest establishments of the kind in the city, was destroyed. The losses aggregated about $500,000.

A terrible cyclone struck Goliad on May 1, completely destroying the western part of the city—a strip 3 miles wide and 47 miles long. The total amount of about 125. The number of those injured was about the same, not more than half of whom were expected by the physicians to recover. A fire occurs as a result of the cyclone at the Landon Hotel and the block in which it was situated were reduced to ashes. Ten guests of the hotel were burned to death, and a great many others were seriously injured.

The Santa Fé express was wrecked by a broken rail 16 miles from Brownwood, and about 30 persons were injured, some fatally.

Destruction along the Rio Grande.—In April it became known that more than half of the 11,000 people in Starr County, and of the 6,000 people in Zapata County, were in a destitute condition. No corn had been raised for two years. The drought began fourteen years previously, and had grown worse year after year. The destitute region is from 50 to 100 miles from the nearest railway point, and the inhabitants were without horses. As soon as the situation became known, successful efforts were made by State officials and private individuals to relieve the distress.

Galveston.—The value of the year's business exceeded that of any previous year. The total value of the business of the port for 1902, both export and import, was $347,963,103, the corresponding figures for 1901 being $327,771,592. The bank clearings for the year were $1,04,997,296, compared with $708,435,800 for 1901. The custom-house receipts for the year were $283,508, compared with $109,064 for 1901. The value of Galveston's foreign exports for 1902 was $92,766,044, compared with $106,526,508 for the preceding year. The decrease was due to the diminished crops of cotton and grain.

In 1902 181,335 tons of oil cake and meal, valued at $4,075,357, were exported through Galveston, compared with 256,882 tons, valued at $5,568,440, in 1901. In 1902, 3,740,508 gallons of cottonseed oil, valued at $1,944,676, compared with 4,933,371 gallons, valued at $1,502,307 for 1901. The value of $523,302 was exported, compared with a valuation of $479,457 on lumber exported in 1901. The live-stock exports were valued at $247,892, compared with $199,717 in 1901. The foreign imports through Galveston in 1901 were valued at $1,312,304, compared with $1,048,888 in 1901. The coastwise trade was more than doubled during the year, and the Southern Pacific Steamship service of the mob began to regular service to Brownsville and Port Arthur. A feature in the foreign tonnage was the size.
ships. Two hundred ships, with a net tonnage of 533,017, entered the ports and 300 ships, with a tonnage of 722,701, cleared. During the year 1901, 291 ships, representing a tonnage of 645,024 entered, and 347 ships, representing a tonnage of 700,100, cleared.

This year $1,715,217 was spent in Galveston for permanent improvements. The appropriation made by Congress for deepening and widening the channel in the inner harbor was $310,000; for repairing the jetties, $750,000. Including the seawall and Government projects money is available to the amount of $3,130,583 for improvements in 1903.

Political.—The Prohibition Convention met in Dallas, July 4. The platform consisted simply of a denunciation of the liquor traffic and the Government's participation in it through the licensing system.

In the platform of the Socialist Convention, Dallas, July 4, the acceptance of the principles of Socialism was held to be the only solution of the labor and capital question. Labor conditions, especially as they affected children, was held to be worse in Texas than in the East and North. The platform of the Populist Convention, at Fort Worth, Aug. 12, reaffirmed the national platform of the party, and called particular attention to the initiative and referendum as the only method by which the people could express themselves fully and freely on political questions. The name of The Allied Populist Party of Texas was adopted, and an invitation was extended to the laboring people to unite with that body.

The platform of the Democratic Convention, which met in Austin, July 17, declared faith in the principles of the party as set forth in the Kansas City platform; pointed out the dangers of imperialism, centralization, trusts, monopolies, mergers, and other combinations as being hurtful to the people; commended the efforts of the Senators and Representatives in Congress from the State for their efforts in aid of tariff reform; of a canal connecting the Atlantic and Pacific Oceans; of election of Senators by direct vote of the people, and not by the State Legislature; for the impeachment of James G. McVicker, Mrs. Rebecca E. Little, Joseph T. Kingsbury, Moses Thatcher, Thomas R. Cutler, and W. W. Riter; Commissioner of Statistics, Charles DeMorse; Commissioner of Health, Dr. T. B. Beatty; Secretary of the Land Board, Byron Groo.

The term of the State officers is four years. They are elected by the people at the general elections. The Legislature meets biennially in January of the odd-numbered years; the session is limited to sixty days.

Education.—According to the yearly statistics compiled in the office of the State Superintendent, in 1902 there was a school population of 76,486. This includes all between the ages of six and sixteen, and shows a decrease over the preceding year of 97. The expenditures for school purposes in 1902 were $1,459,446.06. In 1901 they were $1,396,721.70, a per capita of $19.10 and $17.77 respectively. The maintenance expenses of the schools make the annual cost of education per capita $5.20.

In the financial condition of the public schools there has been a gradual improvement ever since statehood, and the revenues derived from the sale of Government lands, set aside for school purposes, is constantly increasing. The receipts for 1902 are the greatest yet, and the sources from which they come are increased. The following are the sources: State tax of 3 mills, county school tax, district levy, and special tax and sinking-fund tuition. The funds for 1901 amount-
ed to $1,285,454.12; for 1902 to $1,433,897.06. The number of teachers employed in the former year was 1,531, and last year 1,503. The average salary for male teachers in 1901 was $65.85, and for females $45.08. In 1902 these amounts were increased to $66.81 and $48.12 respectively. The number of schoolhouses was increased from 694 to 711. The bonded indebtedness of the State in 1901 was $3,065,605.02; in 1902 there was an increase of $155,534.62. The number of graduates was increased from 1,710 in 1901 to 2,051 in 1902. The report of the University of Utah, at Salt Lake, shows that in the school year of 1901-02 there was an enrolment of 778 students—388 men and 390 women. The total registration for 1902-03 was 814, of whom 401 are men and 413 women. Of these, 75 are in the School of Arts and Sciences, 86 in the State School of Mines, 73 in the State Normal School, and 87 in the State Normal Kindergarten, with 406 in the preparatory school and 114 in the summer school. Of the total number, 26 come from outside Utah. The State School of Mines, established in 1901, has grown greatly, and the regents announce that an improvement of the course is contemplated and an enlargement of the school. The Branch Normal School, at Cedar City, Dec. 1, 1902, had an attendance of 245, an increase of 60 over the previous year, and the State Agricultural College, in Logan, also showed a large increase in attendance, the enrolment for the year 1902-03 being 540.

Finances.—There has been a steady improvement in the finances with each succeeding year since statehood, and the present condition is very gratifying. While there has been a gradual improvement in valuations of taxable property, which raises additional revenue, the demands upon the State are likewise increasing, especially in regard to educational, charitable, and penal institutions. In 1901 the valuation of taxable property in the State was $112,583,130. The value for last year is given as $118,019,402. The bonded indebtedness of the State is $900,000, all due for bonds issued during Territorial days. By reason of a constitutional provision, the total bonded indebtedness of the State can at no time exceed $1,000,000. The State has no floating indebtedness. In 1901 the gross tax was $900,000, and the net tax charged was $900,448.31. In 1902, with a total valuation of $118,019,402, the gross tax was $920,551.72, and the net tax charged was $920,093.75. In 1901 the value of personal property, all animals excluded, was $17,007,114. Last year it was $18,521,875. The receipts from all sources for 1901 were $1,293,725.42, and the disbursements $1,205,163.69. In 1902 the receipts were $1,409,256.47, and the disbursements $1,449,654.68. Warrants are outstanding to the amount of $24,491.76. The cash on hand in the treasury Dec. 31, 1902, was $565,259.31. On an estimated valuation of $120,000,000 for the biennial period of 1903-04 the State Auditor estimates the total requirements at $1,675,250.14, and the estimated revenue for this period is $1,532,507.87.

Railroads.—The mergers of 1902 were felt in Utah, with the result that at the end of the year there were fewer actors in the employ of the railroad systems in Utah than there had been twelve months before. On the other hand, there was far more construction. The Central Pacific has been active between Ogden and San Francisco, improvements for which $20,000,000 has been appropriated. Included in this is the great Lucin Cut-Off across the bosom of the Great Salt Lake, which will cost several million dollars. The Oregon Short Line is constructing what is known as the Leamington Cut-Off, with its 117 miles of track and road-bed. The Lucin Cut-Off will shorten the distance to San Francisco 102 miles. Other construction under way or accomplished is a line of the Oregon Short Line from Corinne to Brigham City, and the building of the Rio Grande Western of the first 20 miles of the cut-off from Salina to connect with a point near Green River, Utah.

Mining.—The metal output of Utah in 1902 was $20,985,337.82, an increase of $3,404,737.84 over 1901. The output in detail was as follows in 1902: Lead, 146,975,597 pounds, at 4 cents a pound, $5,879,143.88; copper, 20,375,760 pounds, at 11.59 cents a pound, $3,048,408.10; silver, 15,882,733 ounces, at 52.15 cents, $8,160,325.44; gold, 194,863 ounces, at $20 an ounce, $3,897,260; total, $20,985,337.82.

The dividends paid by Utah metal mines in 1902 amounted to $5,025,500, an increase over the previous year of $578,600.

One new smelter, with a daily capacity of 1,500 tons, and another of 1,000 tons, previously, have been completed in the Salt Lake valley. Work has begun on a 1,500-ton smelter at Lewiston, Beaver County, on one of 100 tons capacity near St. George, and on another of 50 tons daily capacity at Casbin. The development has been greatest in the copper and gold mines of Beaver County, and the silver, lead, gold, and copper mines of Salt Lake City.

New producing properties have been opened up in various districts, despite the reduction in price of both copper and silver.

Iron, County, Utah, contains some of the largest high-grade iron deposits in the world, and capitalists have taken up the work of developing these resources, with a view to establishing iron manufacturing plants in the State.

This year 11 new mining companies were organized under the laws of the State, with a total capitalization of $60,945,900.

Salt.—The production and refining of salt is yearly growing in importance. In the Great Salt Lake there is an apparently inexhaustible supply of this commodity. Among the largest plants are the shores of the lake in that of the Inland Crystal Salt Company, which in 1902 produced 20,000 out of the 35,000 tons shipped out of Utah. Of this output, mining companies in this and adjoining States use nearly 50 per cent. In the making of their ores, and the value of the salt was $17,007,114.

Beet-Sugar.—With 12,907 acres planted in sugar-beets, 154,485 tons were produced and filtered into the mills of the Utah Sugar and the Ana- gymated Sugar Companies. The average yield per acre was 12.05 tons, and 31,800,000 pounds of sugar was produced. In the season of 1902 $40,000 was paid out for beets alone by the Utah Sugar Company and the monthly pay-roll at the mill exceeded $25,000. The contract price per bushel hauled into the shed was $4.75 for the Utah Sugar Company and $4.50 for the Aggregate.

Coal.—The State has several large mines and innumerable smaller ones in many counties, but they convey no adequate idea of the vastness of the coal deposits in the southern parts of the State the outcroppings are minute testimonials of the great bodies of fuel under the surface. The coal of Utah is not ex- celled in that of the major State in the Union. It is of two classes—steam-producing and coke-making. The coke industry of the Stati is in its infancy, the production for 1902 being 125,924 tons, against 51,007 for the preceding
year. About 60 per cent. of the coke was used in the State, and the remainder in adjoining States.

The production of coal in Utah in 1902 was 1,154,436 tons, against 1,152,524 tons in 1901. The value of the product, based on its price at the mines, $1.50 a ton, was $2,462,154 this year, against $1,829,336 in 1901. In 1902 1,183 men were employed in the coal-mines. In 1901 there were 1,724. The number of accidents in Utah coal-mines was 21, against 26 in 1901. The fatalities numbered 9, against 7 in the preceding year. Eight new mines were opened in 1902, 2 in Carbon County and 6 in Emery.

Live Stock.—The statistics for 1902 show a decrease in the number of live stock, but an increase in value, this being due to the fact that in the past year the stock growers have been encouraged by State and county aid to enhance the value of their property by breeding up. The State at present under the auspices of the State, is especially responsible for this change. In 1901 there were 72,072 horses and mules in the State, valued at $1,530,761. Last year there were 72,688, valued at $1,988,734, valued at $3,734,672. The number decreased last year to 204,179, valued at $3,479,732. In 1901 1,331,383 Utah sheep were numbered. Last year the number fell off to 1,585,801, and their value to $3,657,269. The swine in 1901 numbered 16,088, and were valued at $51,606. The following year they numbered 16,789, valued at $54,283. The poultry, including turkeys, geese, ducks, and chickens, numbered last year 588,518. There were 19,329 stands of bees, which produced 957,025 pounds of honey.

Farm Labor.—Farm-hands to the number of 3,221 earned $1,130,430, an average $17 p month of $29.25. The women on farms, numbering 646, earned $56,330, and their average wages per week was $2.48. Both men and women received board and lodging in addition.

State Lands.—When Utah became a State, Congress granted to her certain tracts of land for the support of public institutions. Sales of State land have continued throughout the year, and the funds have been invested as rapidly as possible. In 1902, the investments of the several land-grant funds aggregated $718,188.50, as follows: Agricultural College, $33,578.25; Deaf and Dumb School, $147,803.03; Insane Asylum, $20,800; Institution for the Blind, $8,986.30; Miners’ Hospital, $9,014.10; Normal School, $13,778.45; public buildings, $10,280.60; reservoirs, $82,577.01; Reform School, $22,522.45; general school fund, $290,165.50; School of Mines, $23,484.25; university, $18,365.01. The rates of interest vary from 3.75 to 7 per cent. The investments are in farm mortgages and in Government and municipal bonds. The land sold for $1.25 an acre and upward, much of it being paid for in 10 annual installments.

Fish and Game.—In the two years 1901-02 the State Fish and Game Commissioner planted 4,722,000 fish in the waters of the State. The fry were principally those of the eastern brook trout, with some Montana grayling, landlocked salmon, and native trout. The product came largely from the State fisheries, with some importations from other States. Trout in the mountain streams and black bass in the lakes have been found to thrive best. In the two years 1900-01, 1,343,140 were taken for commercial purposes from Utah and Panguitch lakes. No account was kept of the fish taken from the streams and other lakes, or of those caught for private use. Of these, the black bass at 10½ cents a pound and the trout at 20 cents a pound were the most valuable. Many fish were lost through irrigation ditches and canals, and still more were killed by sawdust from the sawmills along the streams.

There has been a slight decrease in the number of deer. This is due to the hunters and to the fact that the sheep are destroying the ranges in the State, driving the deer elsewhere. Antelope are holding their own, and even increasing a little in number, owing to the strict law against their being killed at any time. The elk are nearly all gone, except in the high peaks of the Uintah mountains in the northeastern part of the State. Mountain sheep are practically extinct, although a few have been seen in Beaver County. Of the game-birds, the sage-hen is still plentiful, despite the large number of hunters. The blue grouse, pine-hen, or fool-hen, is holding its own. The sharp-tail grouse or prairie-chickens are decreasing, while the ruffed or drummer grouse are becoming rare. The "Bob White," or eastern quail, has been almost exterminated. The California quail, known locally as the "Dixie" or Gambell's partridge, Chinese pheasants are propagating rapidly and keeping ahead of the hunters. More stringent game-laws have lost 100 the number fell off to 1,585,801, and their value to $3,657,269. The swine in 1901 numbered 16,088, and were valued at $51,606. The following year they numbered 16,789, valued at $54,283. The poultry, including turkeys, geese, ducks, and chickens, numbered last year 588,518. There were 19,329 stands of bees, which produced 957,025 pounds of honey.

The irrigation law gave a fresh impetus to irrigation in Utah. The most important of the single events in this line was the appropriation by the Utah Sugar Company of the property of the Bear River Irrigation and Ogden Water-Works Company. This latter company owned large irrigation works and a great tract of irrigable land in Bear river valley. The new owners have begun the work of extending the canals, and are bringing large numbers of farmers into the region. The State Engineer, in his annual report, mentions projects that are to be carried out, with aid from the federal government. The most important of these is the Enterprise for the development of Utah Lake as a storage-reservoir. It is proposed to raise the level of the lake by means of dikes, and increase the flow into it by diverting Strawberry creek into Diamond Fork, thence into Spanish Fork and Utah Lake. A 34½-mile tunnel through the Wasatch mountains would be needed to accomplish this. The enterprise was approved by the State Irrigation Congress, which met in Salt Lake City, Feb. 28 to March 1, and again in April. This congress was called by the Governor, and representatives were sent from every county.

The irrigation policies of the State and nation were discussed, and it was decided to ask the help of the United States Government for the Utah lake enterprise. Among the new irrigation enterprises mentioned by the State Engineer is one to construct a reservoir in Bear river valley of the storage capacity of 220,000 acre-feet, the construction of an immense canal in the eastern part of the State, drawing water from Grand river, the building of an immense reservoir in Emery County, and the further utilization of Weber river.

State Institutions.—Special attention is given to manual training by the management of the State Industrial School in Ogden. The boys are
trained in blacksmithing, carpentry, and shoemaking, and the girls in needlework, sewing, fancy work, and knitting with knitting-machines. An increase in the percentage of reformation is noted.

The School for the Deaf, Dumb, and Blind, at Ogden, was attended by 95 deaf and 18 blind pupils. Besides the regular scholastic studies, carpentry, printing, shoemaking, domestic science, dressmaking, bartering, blacksmithing, music, canoe-seating, basket-making, hammock-making, and fancy weaving were taught.

The State Insane Asylum contained 350 inmates, an increase of 30 in two years. The average daily cost of each patient was 32.4 cents, a slight increase over the preceding two years, due to the advanced price of commodities. The board of trustees has requested the Legislature to change the name of the institution to Mental Hospital.

The number of convicts in the Utah State Penitentiary decreased 28 in two years. The per capita cost of maintenance rose from 42 cents a day in 1899 to 56 cents in 1902. The manufacturing department made all the clothing and shoes worn by prisoners, and in addition made and sold socks, brushes, saddle-cinches, clothing, and other articles at a profit of $5,336.62. In two years the Board of Pardons granted 57 pardons, commutations of sentence, and 12 paroles.

The Utah Art Institute, supported by the State, held exhibitions in Salt Lake City and Provo this year, besides several smaller exhibitions of school drawings. The State acquired the Allen Art collection, which is kept in temporary quarters in the State-House until a permanent exhibition hall can be secured.

Political.—In April, Reed Smoot, an apostate in the Mormon Church, announced his candidacy for the United States Senate, and he succeeded in capturing a majority of the Republican County conventions at which candidates for the Legislature were nominated.

The Democratic State Convention met in Provo and nominated W. H. King for Congressman at large and Richard W. Young for Justice of the Supreme Court.

The Republican Convention met later in Ogden, and nominated Joseph Howell for Congress and William M. McCarty for Justice of the Supreme Court.

The Socialists nominated Matthew Wilson for Congress and Warren Foster for Justice of the Supreme Court.

The election, Nov. 4, resulted as follows: Congressman, Howell, 43,710; King, 38,196; Wilson, 2,936. Supreme Justice, McCarty, 43,214; Young, 38,432; Foster, 3,969.

The Republicans elected 6 out of 9 Senators, giving them, with hold-overs, 12 members to 6 Democratic members. Forty Republicans were elected to the house and 5 Democrats. As a majority were pledged to Smoot, his election was assured.

VERMONT, a New England State, admitted to the Union March 4, 1791; area, 9,565 square miles. The population, according to each decennial census, was 154,465 in 1800; 217,893 in 1810; 235,866 in 1820; 280,635 in 1830; 281,948 in 1840; 314,120 in 1850; 315,069 in 1860; 350,531 in 1870; 332,286 in 1880; 332,422 in 1890; and 343,841 in 1900. Capital, Montpelier.

Government.—The following were the State officers in 1902: Governor, William W. Stickney; Lieutenant-Governor, Martin F. Allen; Secretary of State, Fred. A. Howland; Treasurer, John L. Bacon; Auditor, Orton M. Barber; Adjutant-General, William H. Gilmore; Superintendent of Education, W. E. Ranger—all Republicans; Supreme Court—Chief Justice, John W. Rowell, appointed by Gov. Stickney to fill the vacancy caused by the death of Russell S. Taft; Assistant Justices, Loveland Musson, John H. Watson, H. R. Start, James M. Tyler, W. P. Stafford, and Seneca Haselton; Clerk, M. E. Smiley—all Republicans.

State officers are elected biennially in September of the even-numbered years. The Legislature meets biennially in October of the same years. There are 30 Senators and 242 Representatives. The town system of representation is still maintained.

Finances.—The report of the Treasurer for the fiscal year ending June 30, 1902, shows the following totals of cash transactions of his office: Cash on hand July 1, 1901, $101,559.93; receipts, $1,465,088.46; disbursements, $1,261,079.11; cash on hand June 30, 1902, $324,969.28. From this last amount were payable by the State $235,036.07 apportioned for State school and highway taxes, aggregating $235,036.07 apportioned for distribution to the several towns and cities.

In the fiscal year ending June 30, 1901, $260,000 was borrowed for the use of the State, of which $160,000 was paid the same year. To the balance was added in the ensuing year $275,000, but all loans of this character were taken up prior to June 30, 1902. The expenditures for interest of all descriptions were $24,727.37 and $27,724.15, for the respective fiscal years.

The receipts on account of corporation taxes show considerable increases, the totals received from the various classes of corporations assessed on deposits, appraisal, or gross earnings for the years ending in 1901 and 1902 being $433,543.42 and $462,816.62, respectively. The increase in license taxes paid in the year ending June 30, 1902, was $16,418, or over $4,000 more than ever.

The Legislature of 1900 assessed a State tax of 15 cents on the dollar of the grand list of 1900, half to be paid into the treasury of the State or before Nov. 10, 1901, and the remaining half on or before June 10, 1902. The grand list for 1901 amounted to $1,730,149.92 and the tax aggregated $208,592.49.

The Legislature of 1900 provided for the annual assessment of a tax of 8 cents on the dollar upon the grand list for the support of public schools instead of 5 cents as theretofore. The assessment went into force Feb. 1, 1901, and it therefore does not affect the amount of the tax of 1901. This tax is distributed on or before July 10 annually among the several cities, towns, and unorganized towns, in proportion to the number of school children sustained during the school year ending March 31.

The State highway tax for 1902 assessed up to the grand list of 1901 amounted to $89,567. The amount of the 1901 apportionment brought forward for addition to the tax of this year was
afford equal school privileges as nearly as possible, at the discretion of the State Treasurer, the State Superintendent of Schools, and the examiner of teachers for Washington County. But no town shall receive any portion of this money unless said town shall raise at least 50 cents on the dollar on the grand list of said town for school purposes."

Montpelier.—Statistics regarding the growth of Montpelier in the past ten years have been compiled. There were 317 dwelling-houses erected, apart from remodeled houses or barns. There have been 60 other buildings erected for business, including blocks, manufacturing plants, etc. In addition to these over $200,000 has been expended in the erection of public buildings from which no taxes are derived. The valuation of real estate in 1901 was $3,064,930, and in 1891 $1,509,300.

Legislative Session.—The following is an abridgment of the more important acts passed by the Legislature at its biennial session in October, 1902.

No person shall, in order to aid or promote his own nomination, or the nomination of another person, as a candidate for public office, pay or contribute any money or valuable consideration for traveling, for writing and printing any letter, circular, or other publications not issued at regular intervals, whereby he may state his positions or views upon public or other questions; for stationery and postage, for telegraph, telephone, etc. No publisher of any newspaper shall accept payment for the support or advocacy in such newspaper or publication of the nomination of any person as a candidate for public office in this State.

Money loaned at a rate of interest not exceeding 3 per cent. per annum to any town, city, village, or incorporated school district by individuals living in such town, city, village or incorporated school district shall be exempt from taxation.

Women twenty-one years of age may be elected or appointed to the office of clerk of a town or to the office of treasurer of a town, or to both of said offices, and may be appointed town superintendent of schools.

No automobile or other motor vehicle shall be run on any public highway outside the limits of a city or town at a speed exceeding 15 miles an hour, and no such vehicle shall be run on any public highway within the limits of a city or town at a speed exceeding 6 miles an hour.

Every physician engaged in the practice of medicine in Vermont shall provide for the instruction of advanced pupils in higher branches of study in the high school or schools of the town. When no high school is maintained by a town, the board of school directors shall provide such instruction for such pupils in the high school of an incorporated school district or in an academy of the town. When no high school or academy exists within the town, the board of school directors shall provide such instruction for such pupils in the high schools or academies of other towns within or without the State.

A sum not exceeding $200 is appropriated annually to aid in defraying the expenses of the annual meeting of the State Teachers' Association.

The sum of $15,000 shall first be reserved from the amount of the State school tax paid by the several cities and towns into the treasury of the State. The remainder shall be distributed among the cities and towns in proportion to the number of school children in the same.
proposed local-option license law, pending the result of the vote upon the referendum, Feb. 2, 1903: the warrant of every town meeting to be held on the first Tuesday of March, 1903, and annually thereafter shall contain an article providing for a vote upon the question "Shall licenses be granted for the sale of intoxicating liquors in this town?" and that if a town voting in favor of license shall, upon the application of 6 voters, call a special town meeting to determine the kind of license to be issued.

The bill provides for 7 classes of licenses to be granted at fees ranging from $1,200 for a saloon to $10 for a druggist who can sell for medicinal purposes.

**Political.**-Four candidates for the governorship were in the field—John G. McCullough, Republican; Percival W. Clement, Fusion; Felix N. McGettrick, Democrat; Joel O. Sherburne, Prohibition. A split in the parties was caused by the agitation over the new license local-option measure favored by the Republicans. Those adhering to the prohibitory law enacted in 1882 supported the candidacy of Clement.

The platform adopted by the Republicans at their convention recognized the fact that the enormous business of the country, in its various departments, was now done by combination, corporate or individual, and disclaimed a spirit of unreasoning hostility to such combinations, but favored the utmost vigilance—legislative, judicial, and executive—in guarding the public abuse of combined power, the swift and sure punishment of greedy offenders of any sort, strict safeguards against overvaluation, issue of fictitious stock, and demanded public accountability of exact and verified statements by the officials of corporations and combinations that shall clearly show the public their exact financial condition.

The referendum resolution favoring a license and local-option measure to displace the prohibitory law of 1882 declares:

That the Republican party of Vermont adheres to its long-cherished belief that unrestricted traffic in intoxicating liquors is a public evil, and that the material modification of existing law on that subject should be made only after thorough discussion and by the deliberate will of the people. And we request the State Legislature at its next session to make provision for ascertaining the will of the people by direct vote upon the acceptance or rejection of a license and local-option law.

The platform also favored a law regulating primaries.

At the State election in September the following vote was polled: McCullough, 31,829; Clement, 28,009; McGettrick, 7,252; Sherburne, 2,460. A majority is 34,606, and therefore the election of Governor and Lieutenant-Governor devolved upon the Legislature. The 3 remaining State officers received the full party vote. The officers finally chosen were: Governor, John G. McCullough; Lieutenant-Governor, Zed S. Stanton; Secretary of State, Frederick G. Fleetwood; Treasurer, John L. Bacon; Auditor, Horace F. Graham; Adjutant-General, William H. Gilmour; Superintendent of Education, W. E. Ranger—all Republicans.

**VIRGINIA,** a Southern State, one of the original thirteen, ratified the Constitution June 25, 1788; area, 42,450 square miles. The population, according to the census of 1870, was 749,710 in 1700: 880,200 in 1800; 974,600 in 1810; 1,055,116 in 1820; 1,211,405 in 1830; 1,239,707 in 1840; 1,431,661 in 1850; 1,566,318 in 1860; 1,223,163 in 1870; 1,165,980 in 1880; and 1,534,184 in 1900. Capital, Richmond.

**Government.**—The following were the State officers in 1902. Governor, Andrew J. Montagu; Lieutenant-Governor, Joseph B. Willard; Secretary of State, D. O. Eggleston; Attorney-General, W. A. Anderson; First Auditor, Morton Marye; Second Auditor, Josiah Ryland, Jr.; Treasurer, A. W. Harman, Jr.; Superintendent of Public Instruction, Joseph W. Sarahall; President of the Supreme Court of Appeals; James Keith: Justices, S. G. Whittle, John A. Buchanan, George M. Harrison, and Richard H. Cardwell. All are Democrats.

Five of the State officers—Governor, Lieutenant-Governor, Secretary of the Commonwealth, State Treasurer, and Superintendent of Public Instruction—are elected by the people. They each serve four years. The election for these officers took place in November, 1901. The Auditor of Public Accounts is elected by the joint vote of the two houses of the General Assembly, to serve four years. The Legislature meets biennially, the second Wednesday in January following the election. There are 36 Senators and 86 members of the House.

**Finances.**—The following is a synopsis of the financial operations of the treasury for the financial year ending Sept. 30, 1902: Balance Oct. 1, 1901, $864,400.92; receipts in fiscal year 1901-02, $378,709,942; balance Oct. 1, 1902, $739,392.72. The disbursements were: Literary fund, $291,215.57; interest on public debt, $843,896.57; sinking fund, $1,077.78; Miller fund, $75,944.17; total amount in the treasury to the credit of the several funds, Oct. 1, 1902, $1,029,800.72. In addition to the above the United States direct tax fund has its credit $1,167,174.

**Population Statistics.**—The Census Bureau reports that in 1890 there were 165,630 Virginians living elsewhere than in the State at their birth. The Census Bureau has compiled table—one giving the number of black Virginians living in other States, the other the number of negroes from other States living in Virginia. The tables show that in 1900 the total number of negroes born in Virginia was 878,088; living in Virginia, born there, 625,544; born in Virginia, living in other States, 253,444. Total number of negroes living in Virginia in 1900 was 878,088; had emigrated from Virginia 253,444, and immigrated to Virginia 35,026. In the decade between 1890 and 1900 the negro population of Richmond decreased from 22,330 to 22,230.

**Resources and Products.**—The Crop Report, published by the authority of the Secretary of Agriculture, gives the following statistics of the produce, production, and value of the principal farm-crops of the State in 1902: Corn—areage, 1,879,348; production, 41,345,656 bushels; value, $21,490,741. Winter wheat—areage, 637,000; production, 3,635,494 bushels; value, $2,572,040. Oats—areage, 222,074; production, 3,886,295 bushels; value, $1,632,244. Barley—areage, 2,653; production, 48,856 bushels; value, $25,256. Ry—areage, 28,147; production, 251,511 bushels; value, $165,067. Buckwheat—areage, 20,862; production, 346,309 bushels; value, $207,785. Potatoes—areage, 50,831; production, 3,789,825 bushels; value, $2,198,068. Hay—areage, 472,913; production, 501,288 tons; value, $6,507,401. Tobacco—areage, 182,359; production, 136,769,250 pounds; value, $12,306,232. The definite amount and value of tobacco in 1902 was not reported, but it is estimated that in 1902 Virginia produced 248 pounds of lint cotton to the acre under cultivation. The average of the 14 producing States is 185.5 pounds per acre; and Virginia stands sixth in order of amount.
The Census Bureau issued a preliminary report on the manufacturing industries of Virginia. It shows for the State a total of 8,245 establishments in 1900, an increase of 4 per cent. in the decade. The total capital was $105,512,855, an increase of 63 per cent.; average number of wage-earners 72,527, increase 35 per cent.; total wages, $22,596,060, increase 41 per cent. The miscellaneous expenses were $12,258,244, an increase of 65 per cent.; cost of materials used, $74,762,740, an increase of 44 per cent.; value of all manufacturing products, including custom work and repairing, $132,735,620, increase 50 per cent.

Education.—The Department of Public Instruction announced the apportionment of the State school funds for 1901-02, as being at the rate of 28 cents and 4 mills per capita of the school population. The whole amount apportioned was $4,16,507. The amount per capita of school population was $1.167.

The State Board of Education declined to renew the contracts for two books on the public schools of Fiske, the history of the United States and Our Country, a history of the United States, written by Cooper, Estell, and Leman. This action is based upon the determined effort to keep the State treasurer and others from removing from the public schools of the State every history that is objectionable to Confederates, their contention being that Fiske's history and Our Country do not represent fairly the war of secession. A large number of the teachers in the public schools are favorable to Fiske's history and also to Our Country for pedagogic reasons. They declare that these two histories offer more abundant material for classroom purpose, and present the subject in better form for teachers and pupils.

An address delivered by Gov. Montague at Charlottesville, July 8, before the Virginia teachers and superintendents, contained the following statistical facts, based upon Superintendent Southall's biennial report: Of 6,538 county schools, 2,632 fall below the legal required average attendance of 20 pupils to the school. Out of 2,032 colored schools, only 498 fall below the required average. The Governor referred to the necessity of industrial training for the negroes. He said the wisest act of the State board would be to abolish the classical department at the Petersburg Colored Normal and create an industrial department in its place.

The following are among the provisions of the new Constitution relative to education: "No appropriation of public funds shall be made to any school or institution of learning not owned or exclusively controlled by the State or some political subdivision thereof; provided, first, that the General Assembly may, in its discretion, continue the appropriations to the College of William and Mary, and that counties, cities, towns, and districts may make appropriations to non-sectarian schools of manual, industrial, or technical training, for institutions of learning for the two fiscal years ending Sept. 30, 1902, and Sept. 30, 1903, were as follows: Medical College of Virginia, $3,000; State Female Normal School, $16,000 and $12,000 for new building; University of Virginia, $50,000 and additional for amount expended on hospital, to be refunded to State; Virginia Military Institute, $25,000; Virginia School for the Deaf and Dumb, $25,000 for new buildings; Polytechnic Institute, Blacksburg, $25,000 and an additional sum of $25,000 for new buildings; Virginia Normal and Collegiate Institute, $15,000, provided that it be converted into an industrial school; William and Mary College, $15,000 and $5,000 for electric-light plant; public schools, $200,000.

Penitentiary.—The report of the joint commission appointed to investigate the conditions existing at the Penitentiary contains the following statement: "Its condition (overcrowded) is almost incomprehensible to the human mind, and it would be difficult indeed to conceive of any penal institution being permitted to continue under such intolerable conditions. Visitors from all parts of the country—from Florida to Maine—have turned away from the contemplation of its sickening horrors in wonder and amazement that the State of Virginia would countenance the continuance of such dreadful conditions."

The report says the death rate, as ordinarily reported, does not convey an accurate idea of the hygienic condition of the prison, as many are annually pardoned because of broken health, and most of them die soon after being liberated. The commission is of the opinion that it is absolutely necessary that the prison be removed to a place near a large city to provide ample protection against fire and to have the military at hand in case of serious trouble. On the subject of convict labor, the report says the consensus of opinion seems to be that it is better to have the men at some contract work in the manufacture of articles of commerce than to have them brought into competition with local State labor.

The minority report goes very fully into a penological discussion. It does not excuse the overcrowded condition of the prison, but it insists that it has not been so productive of evils as the majority says.

The appropriations for criminal expenses for the fiscal years ending Sept. 30, 1902, and Sept. 30, 1903, as reported from the House Committee on Finance, are: Transportation of prisoners to and from the Penitentiary, $6,000; expenses of juries, witnesses, and prison associations, $240,000.

Legal Decision.—The Supreme Court affirmed the judgment of the Circuit Court holding the railroad company responsible for a railroad company's accident to a passenger traveling on a free pass, arguing that the company agreeing to carry the passenger came under the duty of transport him safely, and the agreement by which it undertook to relieve itself from the consequences of the negligence of its servants was void as against the policy of the State, which is to enforce with equal hand the performance of those duties upon which the safety of her citizen depends.

An interesting case in which an opinion was delivered is that involving riparian rights and the accretion of property as a result of changes in a river boundary. A lot in Lynchburg that was condemned for canal purposes in 1836 originally embraced about 2 acres. The changes in the channel of the river enlarged this to about 4 acres, when in 1896 the complainant sought to acquire title to the extra 2 acres, contending that the condemnation did not extend to the 4 acres. The defendant instituted chancery proceedings, setting up a title to the accretions and increment of land as well as to the tract originally conveyed. The Court of Appeals held that by purchase the defendant is a fee-simple riparian pro.
priest, empowered to take, _jure duciuricunm_; and that the water-line of James river, however much it may shift, is the boundary of the property purchased.

Lawlessness.—Lynchings of negroes occurred at Leesburg and at New Glasgow, Amherst County, the victims being accused of the murder of white men. Satisfactory evidence was not forthcoming of the guilt of the man who was executed at Leesburg.

Political.—The convention called to frame a new Constitution for Virginia completed its work, and on May 29 proclaimed it by a vote of 48 to 38, after it had voted down by decisive majorities propositions to submit the work of the convention to the present or full electorate and to the new or restricted electorate. Accordingly, Gov. Montague issued his proclamation on June 29 to the people of Virginia to recognize and support the new instrument, and also called the Legislature in extra session on July 15 to put the Constitution into effect. The following are the most important sections:

In controversies respecting property, and in suits where the value in controversy is under $20, all actions of debt, slander, trover, and detinue, and all cases where the value in controversy is under $20, shall be tried by a jury a trier; but the General Assembly may limit the number of jurors for civil juries in circuit and corporation courts to not less than 5 in cases now cognizable by judicial commissioners, or to not less than 7 in cases not so cognizable.

Every male citizen of the United States, twenty-one years of age, who has been a resident of the State for two years, of the county, city, or town, one year, and of the precinct in which he offers to vote, thirty days, next preceding the election in which he offers to vote, has been registered, and has paid his State poll-tax, as hereinafter required, shall be entitled to vote for members of the General Assembly and all offices elective by the people; but removal from one precinct to another in the same county, city, or town shall not deprive any person of his right to vote in the precinct from which he has moved, until the expiration of thirty days after such removal.

There shall be general registrations in the counties, cities, and towns of the State during the years 1902 and 1903 at such time and in such manner as may be prescribed by an ordinance of the General Assembly. Any registration of any male citizen of the United States having the qualifications of age and residence required in section 18 shall be entitled to register, if he be:

1. A citizen of the United States, at the time of the adoption of the Constitution, served in time of war in the army or navy of the United States, or of the Confederate States, or of any State of the United States, or of the Confederate States; or,

2. A son of any such person; or,

3. A person who has paid to the State for the year next preceding that in which he offers to vote, not less than one dollar on property owned by and assessed against him; or

4. A person able to read any section of this Constitution submitted to him by the officers of registration and to give a reasonable explanation of the same; or, if unable to read such section, able to understand and give a reasonable explanation thereof when read to him by the officers.

After the 1st day of January, 1904, every male citizen of the United States having the qualifications of age and residence shall be entitled to register, provided:

1. That he has personally paid to the proper officer all State poll-taxes assessed or assessable against him under this or the former Constitution for the three years next preceding that in which he offers to register, or, if he come of age at such time that no poll-tax shall have been assessable against him for the year in which he offers to register, has paid $1.50 in satisfaction of the first year's poll-tax assessable against him; and

2. That, unless physically unable, he make application to register in his own handwriting, without aid, suggestion, or memorandum, in the presence of the registration officers, stating therein his name, age, date, and place of birth, residence and occupation at the time and for the two years next preceding, and whether he has previously voted, and, if so, the State, county, and precinct in which he voted last.

Any person registered under either of the last two sections shall have the right to vote for members of the General Assembly and all officers elective by the people, subject to the following conditions:

That he, unless exempted by section 22, shall, as a prerequisite to the right to vote after the 1st day of January, 1904, personally pay, at least six months prior to the election, all State poll-taxes assessed or assessable against him, includable in any judgment against him; and the next preceding that in which he offers to vote, provided that, if he register after the 1st day of January, 1904, he shall, unless physically unable, prepare and deposit his ballot without aid, on such printed form as the law may prescribe: but any voter registered prior to that date may be aided in the preparation of his ballot by such officer of electivity as he himself may designate.

No person who, during the late war between the States, served in the army or navy of the United States, or of the Confederate States, or any State of the United States, or of the Confederate States, shall at any time be required to pay a poll-tax as a prerequisite to the right to register or vote; nor shall the collection of the State poll-tax assessed against any one be enforced by legal process until the same has become three years past due.

Sec. 23 enumerates the persons disqualified for voting, such as obtain in most States with the addition of persons who, while citizens of the State, after the adoption of this Constitution, have fought a duel with a deadly weapon, or shot or accepted a challenge to such a duel, either within or without this State, or knowingly conveyed a challenge, or aided or assisted in any way in the fighting of such duel.

All elections shall be by ballot; all elections by any representative body shall be by voice, and the vote recorded in the journal thereof.

The General Assembly may prescribe a property qualification not exceeding $250 as a prerequisite for voting for other than members of the General Assembly.

Every person qualified to vote shall be eligible to hold any office of the State, or of any county, city, town, or other subdivision of the State, except as otherwise provided in this Constitution. Men and women eighteen years of age shall be eligible to hold the office of notary public.

The legislative power of the State shall be vested in a General Assembly.

The Senate shall consist of not more than 30 and not less than 33 members, elected quadrennially on the Tuesday succeeding the first Monday in November.

The House of Delegates shall consist of not more than 100 and not less than 90 members, elected biennially.

The members of the General Assembly shall receive for their services a salary to be fixed by
UNITED STATES OF AMERICA. (WASHINGTON.) 815

law; but no act increasing such salary shall take effect until after the end of the term for which the members voting thereon were elected.

The General Assembly shall meet once in two years on the second Wednesday in January next succeeding the election of the members of the House of Delegates, to continue sixty days; but with the concurrence of three-fifths of the members elected to each house, the session may be extended for a further period not exceeding thirty days.

The Governor shall hold office for a term of four years, to commence on the 1st day of February next succeeding his election, and be ineligible to the same office for the term next succeeding that for which he was elected.

The Supreme Court of Appeals shall consist of 5 judges, any 3 of whom may hold a court. It shall have original jurisdiction in cases of habeas corpus, mandamus, and prohibition; but in all other cases in which it shall have jurisdiction it shall have appellate jurisdiction only.

The assent of at least 3 of the judges shall be required for the court to determine that any law is, or is not, repugnant to the Constitution of or of the United States, and if, in any case involving the constitutionality of any such law, not more than two of the judges sitting agree in opinion on the constitutional question involved, the case shall be remanded, without passing on such question, no decision shall be rendered therein, but the case shall be reheard by a full court.

The judges of the Supreme Court of Appeals shall be chosen by the joint vote of the two houses of the General Assembly. They shall, when chosen, have held a judicial station in the United States, or shall have practised law in this or some other State for five years. They shall be elected for terms of twelve years.

The General Assembly shall set apart as a permanent and perpetual literary fund the present literary fund of the State; the proceeds of all public lands donated by Congress for public free-school purposes; of all escheated property; of all waste and unappropriated lands; of all property accruing to the State by forfeiture and all fines collected for offenses committed against the State and such other sums as the General Assembly may appropriate.

The State tax for schools may not be less than 1 mill on the dollar, nor more than 5 mills.

Each separate school district may raise additional sums by a tax on property not to exceed in the aggregate 5 mills on the dollar in any one year for establishing and maintaining schools, with the provision that primary schools be maintained at least four months in the year before schools of a higher grade receive appropriation.

The General Assembly may provide for the compulsory education of children between the ages of eight and twelve years.

White and colored children shall not be taught in the same school.

A board of directors, consisting of 5 members, is charged with the management and control of the State Penitentiary and prison farms. A special board of directors, consisting of 3 members, is provided for each of the 4 State hospitals, and these special boards are constituted a general board for the control of all the hospitals for the insane in the State.

A permanent commission to consist of 3 members, to be known as the State Corporation Commission, is appointed by the Governor, subject to confirmation by the General Assembly, to hold office for six years. One of the commissioners must have the same qualifications that are prescribed for judges of the Supreme Court of Appeals. The commission becomes a department of the government through which shall be issued all charters and amendments or extensions thereof for domestic corporations, and all licenses to do business in this State to foreign corporations, and through it will be carried out all the provisions of the Constitution, and of the laws made in pursuance thereof, for the creation, organization, supervision, regulation, and control of corporations chartered by and doing business in the State. It shall from time to time prescribe and enforce against all transportation and transmission companies such rate charges, classifications of traffic, and rules and regulations, and shall require them to establish and maintain all such public service facilities, and conveniences as may be reasonable and just. It has the power and authority of a court of record, to administer oaths, to compel the attendance of witnesses, and the production of papers, to punish for contempt, and to enforce compliance with any of its lawful orders or requirements. Appeals from its rulings may be taken in the manner in which appeals are taken to the Supreme Court of Appeals from the inferior courts.

Free passes are forbidden except to members and officers of the State Corporation Commission for their personal use.

The General Assembly shall enact laws preventing all trusts, combinations, and monopolies injurious to the public welfare.

The General Assembly may levy a tax on incomes in excess of $600 a year; may levy a license tax upon any business that cannot be reached by the ad valorem system; and may impose franchise taxes.

The General Assembly shall levy a capitation tax of, and not exceeding, $1.50 a year on every male resident of the State not less than twenty-one years of age, except those pensioned by this State for military services.

Railroad and canal property must be assessed for taxation, like any other property; and the companies shall also pay a franchise tax of 1 per cent. on gross receipts.

Amendments to the Constitution may be proposed in the General Assembly, and if they shall be agreed to by a majority of the members elected to each house, then the General Assembly must submit them to the people, and if the people shall ratify them by a majority of the electors qualified to vote for members of the General Assembly voting thereon, such amendments shall become part of the Constitution.

WASHINGTON, a Pacific coast State, admitted to the Union Nov. 11, 1889; area, 68,180 square miles. The population, according to each decennial census since admission, was 349,390 in 1890 and 518,103 in 1900. Capital, Olympia.

Government.—The following were the State officers in 1902: Governor, Henry G. McBride, in place of John R. Rogers, deceased (see Annual Cyclopaedia for 1901, page 494); Secretary of State, S. H. Nichols; Treasurer, C. H. Maynard; Auditor, J. D. Atkinson; Attorney General, W. R. Stratton; Land Commissioner, S. A. Calvert; Superintendent of Public Instruction, R. B. Bryan; Adjutant-General, E. H. Fox—all Republic
ans except Rogers and Fox, who are Democrats; Chief Justice of the Supreme Court, James R. Reavis; Associate Justices, R. O. Dunbar, Mark A. Fullerton, T. J. Anders, Wallace Mount, W. B. White, H. E. Hadley; Clerk, C. S. Reinhardt—all Republicans except Reavis and White, who are Democrats.

State officers are chosen for terms of four years, at the time of the presidential elections. The Legislature meets biennially in January of odd-numbered years. It was composed of 34 Senators and 80 Representatives, until at the regular session of 1801 the number of Senators was increased to 42 and the number of Representatives to 93.

Valuation.—The taxable wealth of the State for 1902, as equalized by the State board, is as follows: Land, including town and city lots, exclusive of improvements, $151,460,883; improvements on land, town and city lots, $46,740,031; land, town and city lots, including improvements, $198,200,914; personal property, $45,884,131; railroad-tracks, $16,851,073; total valuation of real and personal property, including railroad-tracks, $290,940,188. The board, at the close of its meeting of 1901, fixed the general fund levy as fixed at 24 mills of the valuation fixed by the State Board. The military-fund, interest-fund, and school-fund levies are fixed by law at one-fifth of the total millage for general, state and military purposes, and 5 mills for school fund.

The total amount that will be raised for State purposes this year is $1,982,718, in addition to the amounts divided from General fund, school fund, and school funds from the tide-lands sales and rentals, and from 10 per cent. of liquor licenses. The amount expected to be raised for each fund is: General fund, $574,067; school fund, $1,304,701; interest fund, $52,189; military fund, $32,189.

Finance.—The quarterly report of the State Treasurer shows a cash balance in his hands at the close of business, Dec. 31, 1902, of $988,742,177. Some of the principal funds into which this amount was divided were: General fund, $92,125; military fund, $308,105,486; school fund, $344,304,629; current school fund, $108,857,622; revolving fund, Penitentiary, $154,044,815; State Library, $20,444,605; Scientific School, $26,033,77; State Capitol Commission, $87,247,86.

The annual report of the Treasurer, issued in October, shows that the indebtedness of the State of Washington has been reduced $131,496.34 in the past two years. The following is the statement of indebtedness at the close of the last biennial period, Sept. 30, 1902: General fund warrants outstanding, $45,741,18; interest on same, estimated, $192,05; State bonds held by permanent school fund, $1,105,000; accrued interest on same, $78,092,68; State funding bonds outstanding, $80,000; accrued interest on same, $873,04; total, $1,349,631,56; less cash on hand in general fund, $7,161,62; actual indebtedness, $1,344,460,94; indebtedness reduced, $131,496.34.

The report shows that the greatest part of the indebtedness, which in 1900 was in general-fund warrants drawing 5 per cent. interest, which interest was paid to individuals and warrant buyers, has been transferred to State bonds, which draw but 3 per cent. interest, and the interest goes to the permanent school fund. More than half of the State funding bonds, which were held by Eastern investment companies and drawing 5 per cent. interest, have been refunded. The Commissioner of Public Lands, S. A. Calvert, issued a comparative statement of the volume of business transacted by his department, which discloses that during the past two years the receipts from the principal money-producing department of the State Government exceeded the receipts during the preceding two years by more than one-third, the increase amounting to $350,000 in round numbers. The receipts for the two years ending Sept. 30, 1902, were $1,204,005,38.

Products and Resources.—The Crop Reporter, published by authority of the Secretary of Agriculture of the United States, gives the following statistics of Washington in acreage, production, and value of the principal farm crops in 1902: Corn, acreage, 10,014, production 230,522 bushels, total value $148,709; winter wheat, acreage 30,315, production 7,923,096 bushels, total value $5,150,402; spring wheat, acreage 757,139, production 15,748,491 bushels, total value $20,256,51; oats, acreage 154,066, production 7,115,677 bushels, total value $3,480,388; barley, acreage 146,075, production 6,121,278 bushels, total value $2,815,788; rye, acreage 2,916, production 51,755 bushels, total value $23,151; potatoes, acreage 31,228, production 4,255,168 bushels, total value $1,616,904; hay, acreage 322,864, production 730,339 tons, total value $6,002,676.

On Nov. 29, 1902, Inspector J. W. Arrasmith presented his biennial report. It showed that in the period between Sept. 1, 1900, and Aug. 31, 1902, the number of cars of wheat inspected at the 3 points of inspection in the States of Oregon, Washington, Seattle, and Spokane—was 37,541, or approximately 35,205,540 bushels; oats, 2,265 cars or 3,125,700 bushels; barley, 1,432 cars or 1,340,292 bushels; total amount of grain, 41,200 cars or 38,763,620 bushels.

A revised bulletin of the Census Office giving statistics of manufactures shows that in 1902 there were in Washington 1,814 manufacturing establishments, with an invested capital of $25,178,732 and a total value of manufactured product for the census year of $40,654,726.

The Director of the United States Mint estimated the State's production of gold in 1902 as amounting to $343,100, and of silver $360,400.

Mining in Washington is slowly recovering from the depressing effect of the temporary diversion of capital to Alaska. In the year ending Aug. 25 the Seattle Assay Office received the following quantities of gold and silver from neighboring fields: Alaska, $3,475,759; Idaho, $8,404,904; Washington, $88,684; British Columbia, $827,678; Yukon Territory, $11,097,118. The hop-crop for 1902 was estimated at 30,000 bales.

The value of the output of the fisheries industry for 1902 is estimated by Fish-Commissioner T. R. Kershaw in his annual report at $6,730,059, including salmon packed, fresh, salt, and smoked, fish, shell-fish, and all fish products. The number of cases of salmon packed in the year is given at 777,494. The commissioner reports that as a total this is under the output of last year.

The report shows that there is invested in the industry in the State of Washington the sum of $6,910,818, an increase of $2,457,348 in the past two years. There are 7,015 whites and 2,055 by- new and Japanese employed in the industry, and their annual earnings are $2,502,550.

Possibly one of the most important subjects touched upon in the entire report is the declaration of Mr. Doane, that the several years' experiments and observations have developed the fact that Eastern oysters will not propagate in Washington waters under natural conditions. The Eastern oyster will spawn profusely, but the spat will not set or thrive. The greatest difficulty to overcome is the low temperature of the waters of the Sound. The average temperature of the water is about 10° lower.
The State of Washington failed to secure a recognition of its claims in the contest over the estate of John Sullivan in the Superior Court of King County being denied by the Supreme Court. The estate, valued at $500,000, was contends for by a large number of alleged heirs.

The contention of the State of Washington was that Sullivan, who died intestate, left no heirs to his property, and that it therefore had escheated to the State. The Supreme Court held that the proper remedy is by appeal from the order of the court denying the State’s petition.

In August, prior to the State elections, the Supreme Court handed down two decisions involving the same questions, and for that reason consolidated at the argument. They were applications for a writ of mandamus to the Governor, requiring him to issue his proclamation for the election of a Governor, a Lieutenant-Governor, and 3 Justices of the Supreme Court at the general election in November. It appears from the petition that John R. Rogers and Henry McBride were, at the general election held in November, 1900, elected to the offices of Governor and Lieutenant-Governor, respectively. That petition was filed on Dec. 26, 1901, by State Penitentiary, aver that an election for Governor and respondent Henry McBride therewith took the oath of office and became acting Governor. The relator in the suit maintained that there was a vacancy in the office of Governor and also of Lieutenant-Governor. Furthermore, the Legislature of 1901 having passed an act increasing the number of judges of the Supreme Court from 5 to 7, appointments were to fill the vacancies created by the act. The relator further maintained that the terms of office of the 2 judges so appointed would expire on the second Monday of October, 1902, and complained that the Governor refused to issue his proclamation for the election of a Governor, Lieutenant-Governor, and 2 Supreme Court Justices, at the general election, held in November.

The mandamus proceedings, approved by the Governor, were instituted to test the validity of the legislative act, and the questions concerning the governorship and Lieut. Governorship were included in order to secure an opinion concerning them. The first question presented was: Does the death of the Governor cause a vacancy in that office which may be filled for the unexpired term, and, if not, does the office of Lieutenant-Governor become vacant when the incumbent assumes the duties of Governor?

The court argued that “it is not shown how an office can be vacant and yet there be a person, not the deputy, or locum tenens, of another, empowered by law to discharge the duties of the office, and who does in fact discharge them. It is not explained how, in such a case, the duties can be separated from the office, so that he who discharges them does not become incumbent of the office. And, in the second place, how a person can fill the office of Governor without being Governor.” Its decision was: “The Constitution having provided that in case of the death of the Governor the duties of the office shall devolve upon the Lieutenant-Governor, there is no vacancy in the office of Governor. When the Lieutenant-Governor, by virtue of his office and of the command of the Constitution, assumes the duties of Governor on the death of Gov. Rogers, the office of Lieutenant-Governor did not thereby become vacant, but the officer remained Lieutenant-Governor entrusted with the powers and duties of Governor.”

As to the incumbency of the Lieutenant-Governor...
or, the court continued: "It is argued, however, that since it is made the duty of the Lieutenant-Governor under the Constitution to be presiding officer of the State Senate, and as such to approve all bills passed by that body, he must as Governor review and approve or reject bills which as Lieutenant-Governor he has already approved. These duties are no doubt inconsistent, but this argument we think is fully met by another provision of the Constitution which provides in substance that when the Lieutenant-Governor shall not act as Governor the Senate shall choose a temporary president. The Lieutenant-Governor, therefore, when the duties of Governor devolve upon him, is relieved of the duties of presiding officer of the Senate."

The Legislature of 1901 passed an act increasing temporarily the number of judges of the Supreme Court from 5 to 7, and authorizing the Governor to appoint 2 judges whose terms of office should end on the first Tuesday after the first Monday in October, 1902. The grounds upon which the mandamus proceedings were based were twofold: 1. That when the increase was once made, no decrease could be made; and 2, that the temporary increase made was in conflict with the constitutional term. The court's decision was as follows: "The act of 1893 does not attempt to change or modify the terms of judges elected. It undertakes to create a vacancy and to terminate the vacancy at a fixed time before an election can take place and before an elective term may begin, and this we hold may be done because there is no fixed constitutional appontive term."

Forest Fires.—In Washington 454,000 acres were burned by brush fires in June. It is estimated that 5,026,800,000 feet of Douglas spruce was killed, representing a value of $5,026,800. Other timber to the value of $725,000 was destroyed. The total loss in Clowitz, Clark, and Skamania Counties, where fires were most disastrous, was $6,600,800, and in the other burned areas $2,550,500.

Soldiers' Monument.—The Legislature of 1901 appropriated $2,500 for the erection of a monument to commemorate the valor of the dead of the First Washington Regiment, United States Volunteers, of which 11 resting in the State plot in the Masonic Cemetery, in Olympia. The monument was placed in position in March. The pedestal is of native granite, 16 feet high, surmounted by a bronze figure of a United States volunteer in the service uniform worn in the Philippines, making the whole structure nearly 23 feet high. The bronze figure was modeled after a photograph of one of the members of the First Washington Regiment. The inscription is as follows: "The State of Washington erects this Monument in Memory of her Valiant Sons."

Political.—At the elections, Nov. 4, Hiram E. Hadley was chosen Associate Justice of the Supreme Court, and Francis W. Cushman, Wesley L. Jones, and Will E. Humphrey, members of Congress, all of whom are Republicans. Both branches of the Legislature chosen are Republican by large majorities.

The new Capitol annex was delayed in construction on account of the failure to receive steel trusses for the domes. Up to August the building had cost $335,892.18, and the expenses of the commission had been $2,283.33. This amount embraces all contracts already made; something in addition will be demanded for fixtures.

WEST VIRGINIA, a Southern State, admitted to the Union June 19, 1863; area, 24,770 square miles. The population, according to each decennial census since admission, was 446,014 in 1870; 618,457 in 1880; 762,794 in 1890; and 958,800 in 1900. Capital, Charleston.

Government.—The following were the State officers in 1901: Governor, A. B. White; Secretary of State, W. M. O. Dawson; Treasurer, Peter Silman; Auditor, Arnold C. Scherr; Attorney-General, Romeo H. Freer; Superintendent of Schools, Thomas E. Miller; Adjutant-General, S. B. Baker; Librarian, S. W. Stark; Bank Examiner, C. B. Kefauver; Secretary of the Board of Agriculture, J. O. Thompson; Labor Commissioner, F. V. Barton; Mine Inspector, J. W. Paul; Game and Fish Warden, E. F. Smith; Presiding Judge of the Supreme Court of Appeals, M. H. Dent; Associate Judges, Henry Brannon, H. C. McWhorter, George Poffenbarger. All the State officers are Republicans except Judge Dent.

State officers are elected for terms of four years at the time of the presidential elections, and are inaugurated on the 4th of the March. The Legislature meets biennially in January of the odd-numbered years.

Finance.—The receipts in the Treasurer's office for the fiscal year ending Sept. 30, 1902, were: State fund, $1,804,738.25; general school fund, $458,903.16; school fund, $85,346.48; total, $2,348,967.90. The disbursements were: State fund, $1,670,246.54; school fund, $182,129.10; total, $2,292,375.64. In addition to this there was to the credit of the State, Sept. 30, 1902, stocks, bonds, other investments of the school fund, and money paid out for criminal charges for the year was $180,438.45.

The chief sources of income for the year ending Sept. 30, 1902, were: licenses, $24,321; corporation licenses on charter, $399,845; railroad taxes, $101,321.45; interest on deposits and stocks and bonds, $72,575; sundries, fines, etc., $29,334.24; capitations, $163,415.75; land, $298,875.25; buildings on land, $45,254.30; lots, $42,109.50; buildings on lots, $89,340.54; intangible personal property, $140,205.15; tangible personal property, $75,890.30.

Militia.—The Adjutant's report for 1902 gives an enrolment of 1,545 men in the State militia with 15,000 available.

Education.—There were employed 844 teachers in the public schools, which numbered 6,478. The enrolment was 276,234; the total cost of the schools was $2,900,500; the enrolment of the State University preparatory schools at Montgomery and Keyser was 1,075, the university enrolment being 982. There are 6 normal schools, chief among which is the Carshall Normal School at Huntington, which had an enrolment of 630 students alone in 1902, that being the largest number that ever attended this institution.

Public Institutions.—The State in 1902 maintained the following institutions: Asylum for Incurables at Huntington; insane asylums at Weston and Spencer; Deaf, Dumb, and Blind Asylum at Romney, Boys' Reform School at Pruntytown; Miners' Hospitals at Welch, McKeendree, and Fairmont; colored institutions at Bluefields and Kanawha; Home for Girls at Salem; Storer College at Wheeling.

The Asylum for Incurables had 3 fine new build ings added in the year, as well as large pumphouses, electric-light plants, laundries, etc., which together cost made; something in addition will be demanded for fixtures.

In 1902, 250 United States prisoners were received at Moundville, and 320 State prisoners were received at the Moundville Prison, the expenses of the institution were much less than the profits from its various workshops. The
UNITED STATES OF AMERICA. (WISCONSIN.) 819

State is one of the few in the Union whose prison is more than self-supporting.

The West Virginia Historical and Antiquarian Society reports for the year 1902 more than 1,100 volumes, 160 pamphlets, and many valuable manuscript maps and charts, and a large collection of valuable autographs. The museum contains nearly 20,000 relics and curios and a fine exhibit of the timber, coal, marble, granite, building-stones, fire and brick clay, and other products of the State, with specimens of its manufactures.

Resources and Products.—West Virginia stands second in the production of coal in 1902; 25,000,-
000 tons of coal were mined, 415 mines being in operation in 54 counties. More than 400 electric
machines were used in various mines during the year, which greatly reduced the number of miners. Almost one-eighth more coal would have been produced this year had it not been for the great strike of the United Mine-Workers, which extended over a period of nearly four months, during which time almost every mine in the New River field, the greatest coal-producing territory in the State, was idle, and almost half of those in the flat Top and Norfolk and Western fields were at a standstill. An average of a miner in West Virginia is about $45 a month.

The United States Steel Corporation is just completing one of the largest operations almost in the world. The production of coke in 1902 was the greatest coke-producing plant in the world, outside of Pennsylvania. In the production of coke, West Virginia is nearing the first rank. In 1902 nearly 3,750,000 tons of coke were produced, valued at more than $4,000,000, the oven being in operation two hundred and eight days. The State stands first in the production of petroleum, 22,600,000 barrels being produced in 1902. The development of oil is driving to the southern section of the State, and the Parkersburg field promises to rival that of the Sistersville territory. Great oil wells were discovered through the year in the southern tier of counties bordering on the Ohio and Big Sandy rivers, and some fine gas-producers have also come in during the year in the southern section of the State.

The greatest source of wealth of the State is its timber, there being fully 15,000 square miles of fine timber lands. The largest mills in the world for hardwoods are in Pocahontas, Randolph, and McDowell Counties in this State. The output of lumber for the year was 180,000,000 feet; of spruce, 75,000,000; of oak, 50,000,000.

The fruit-growing is attracting much attention, some of the largest orchards in the central west being in Randolph and Mineral Counties, especially in the former.

Railroads.—The State has more than 3,500 miles of railway in operation, and surveys were completed in 1902 which will add fully another thousand miles. The chief lines to run surveys through the State in 1902 were the Wahsah and Northern line, which will have a line extending entirely across the State, while the latter is building a branch 120 miles along the Tug and Big Sandy rivers.

In 1902 the State elected 5 Congressmen, a new congressional district having been added by the last apportionment. The Congressmen elected were all Republicans.

WILLIAM McCALL, a Western State, admitted to the Union, May 29, 1848; area, 56,040 square miles. The population, according to each decennial census since admission, was 305,201 in 1850; 775,981 in 1860; 1,064,670 in 1870; 1,668,880 in 1880; and 2,069,042 in 1900. Capital, Madison.

Governor.—The following were the State officers in 1902: Governor, Robert M. La Follette; Lieutenant-Governor, Jesse Stone, died May 16, 1902; Secretary of State, William H. Froehlich; Treasurer, James O. Davidson; Attorney-General, Emmett R. Hicks; Superintendent of Education, Lorenzo D. Harvey; Railroad Commissioner, Graham L. Rice; Insurance Commissioner, Emil Giljohann; Adjutant-General, C. R. Boardman; Dairy and Food Commissioner, H. C. Adams; Labor Commissioner, Halford Erickson; Bank Examiner, E. H. Kidd; Health Commissioner, F. M. Schultz; Fish and Game Warden, J. T. Ellarson; Tax Commissioners, Norman S. Gilson, George Curtis, W. J. Anderson; Forest Warden, C. E. Morley; Chief Justice of the Supreme Court, J. B. Cassoday; Associate Justices, John B. Winslow and Joshua E. Dodge (Democrat), Charles V. Bardeen, and Roujet D. Marshall; Clerk, Clarence Kellogg. The exceptions mentioned, all are Republicans.

State officers are elected for terms of two years in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years. It consists of 33 Senators and 100 Representatives.

Finances.—The balance in the general fund at the close of the year was $238,884.54. In the last two years no transfer from the trust funds to the general fund was made; the meeting temporary deficits. The treasury was able to keep the trust funds fully and profitably invested. In order to maintain this condition, it was found necessary by the executive to delay the expenditure of some extraordinary appropriations in 1901, when legislative expenses were met, and until revenues were received for 1902.

The State Tax Commission issued its report, Oct. 24, on the assessed valuation for the year 1902. The total value of personal property for the State was $277,969,027; and the value of all property $1,504,546,009.

Banking.—The State Bank Examiner's statement of the condition of the banks at the close of business on Sept. 15 included both State and private banks. The loans and discounts were $55,133,591.63; unpaid capital, $974,234.74; overdrafts, $740,252.55; banking house, $1,257,524.88; real estate, $833,656.62; furniture, $388,881.10; securities, $6,597,911.49; cash, $15,247,382; checks, $498,496.12; due from banks, $130,950,767; insurance, $2,040,305.74; specie, $1,672,830.70; nickels and cents, $2,688,45; revenue stamps, $239,738.87; total, $84,615,453.17. Liabilities—Capital stock, $8,684,48,90; surplus, $1,544,806.

Banking.—Undivided profits, 1,441,693.01; deposits, $42,536,504.13; certificates, $2,030,888.36; saving deposits, $13,837,912.58; due banks and bankers, $1,885,265.76; dividends unpaid, $3,866,945; certificates, 4,549,700; cashiers' checks outstanding, $121,141.93; bills rediscounted, $571,064.98; bills payable, $187,046.73; total, $84,615,453.17.

Education.—The report of the Board of Regents of Normal Schools, issued in December, gave the following as the sources from which the income for the support of the normal schools of the State is derived: A fixed amount and appropria-

special appropriations; interest on capital funds; tuition: book rents, sales of all kinds, which is placed by law under the entire control of the board.

In the biennial period from July 4, 1900, to July 1, 1902, inclusive, there was distributed a
Of the 160,795 farms in Wisconsin, 146,799, or 88.5 per cent., are operated by their owners; 10,249, or 6 per cent., by tenants who pay rent in cash; and 12,747, or 7.5 per cent., by tenants who work on shares.

Charities and Corrections.—The State Board of Control gives a statement of the average population and the per capita cost per week, in part of the several charitable, penal, and reformatory institutions under the supervision of the board, from Oct. 1, 1901, to June 30, 1902. The inmates in the State Hospital for the Insane numbered 413; the per capita cost per week was $3.40; in the Northern Hospital for the Insane, 599, the per capita cost was $4.31; in the School for Defectives, 202, the per capita cost was $4.09; in the School for Blind, 111, the per capita cost was $6.03; in the Industrial School for Boys, 399, the per capita cost was $4.38; in the State Prison, 562, the per capita cost was $3.28; in the State School for Feeble-Minded, 484, the per capita cost was $3.39; in the State Reformatory, 149, the per capita cost was $5.18. The increase in the number of insane in the State is not accurately shown here because of the system of transferring the care of this class to county asylums. The number of patients in county asylums is 3,884 and the number cared for in the Milwaukee Hospital for Insane is 527.

Fish and Game.—The report of the State Fish and Game Warden shows the operations of that department during the fiscal year 1899-1902. Instead of being a tax upon the treasury, the department has become a source of revenue to the school funds of the State, approximating $5,000 a year. At the same time the department has furnished a more adequate protection to fish and game than has been heretofore known. This protection has been afforded solely through collection of license fees from those who are benefited by the service. In the last two years the State Warden has bettered the protection to fish and game by increasing his force during those seasons when the laws are most subject to violation and by reducing the number of depredations. The department has more than doubled its force. One result of the increased force is that fishery laws, which have been so long neglected, are more rigidly enforced.

Legal Decisions.—On Jan. 31 the Supreme Court of the State entered an order permitting the Attorney-General to file an information and begin an action to restrain the receiver of the Bayfield and Iron River Railway from tearing up the track and dismantling the road. This is one of the most important decisions rendered by the court in recent years. An action was begun by the federal court to foreclose the mortgage upon said road. The usual judgment of foreclosure and sale was entered. The special master appointed to make the sale was not able to sell the road for the price designated by the court. The judgment apparently threatened a conflict between the Wisconsin courts and federal authority. But a decision was handed down, April 4, by the United States Supreme Court, at Madison, asserting that jurisdiction in the matter rested with the federal court, which the court of appeals for the past season was marketable. The acreage and yield were about the same as in the previous year, but the quality was inferior. This per cent. of the corn reported could be classed as 'merchantable.'
sight of the court to enact those laws pledged to the public by the demands of the Republican party through the platform in its last convention" condemned "the pernicious activity of federal officials in this State, in flagrant disregard of civil-service laws, in attempts to forestall and control the convention action of the party to which they owe their preferment, and in assisting professional lobbyists before the Legislature and elsewhere in the work of defeating legislation in repudiation of party pledges." Its approved the work of the Tax Commission.

The Democratic State Convention met in Milwaukee, Sept. 3, and nominated: For Governor, David S. Rose; Lieutenant-Governor, John Wat- tawa; Superintendent of Public Instruction, Karl A. Mathie. Regarding trusts, the platform said: "We believe that the State should not grant of its sovereign power to corporations to be exercised in the unlawful oppression of the people, and we hereby pledge ourselves to cause to be instituted and prosecuted with vigor such proceedings in the courts, as may violate the law by which they have had no capital stock of the bank, except real estate, and were not liable to taxation again upon this property. It was contended on the part of the bank that it makes capital stock of a bank personal property, and that under the statute it must be assessed as such in the municipalities where the bank is located. Judge Smith sustained the contention of the attorneys for the village.

Oneida Indians at Green Bay.—The Secretary of the Interior, Oct. 16, reversed his ruling, made a year previously, in connection with the claim of the Wisconsin Oneida Indians to participate in the judgment rendered in favor of the New York Indians against the United States Government by the Supreme Court. By this ruling the Indians living at Green Bay will receive about $300,000.

Political.—The platform of the Prohibitionists in convention in Milwaukee, June 19, declared that "annihilation and complete overthrow of the legalized saloon system, and the absolute prohibition of manufacture, sale, importation, exportation, and transportation of intoxicating liquors is one paramount political issue before the American people."

The Socialist platform reaffirmed the allegiance of the party to the principles of international socialism, and its adherence to the national platform adopted at Indianapolis, and pledged itself to such changes as the nationalization of all trusts, national ownership of railroads, telegraphs, telephone, express and steamship lines, and granting every wage-earner over sixty years of age who has earned less than $1,000 a year a pension of not less than $12 a month.

The Republican State Convention met in Madison, July 18, and nominated: For Governor, Robert M. Lafollette; Lieutenant-Governor, James O. Davidson; Secretary of State, Walter L. Housey; State Treasurer, John J. Kempf; At- torney-General, L. M. Sturdevant; Superintendent of Public Instruction, Charles P. Cary; Insurance Commissioner, M. W. Host; Railway Commissioner, John W. Thomas; Register of Deeds, George W. Stover; Surveyor, W. L. Marcy. The platform adopted the last Republican platform as such; approved the administration of Gov. La Follette; regretted the "failure of the last Legisla-
an increase in deposits over 1901 of $2,157,764.27; giving Wyoming a per capita deposit of approximately $88.

Valuation and Taxation.—The Treasurer's report for the fiscal year for 1901 shows that the value of real and personal property in the State in 1902 was $43,548,356; number of cattle 487,489, valuation $3,157,072; number of sheep 3,298,318, valuation $3,777,606.05. The taxes levied in 1902 were as follows: State, $243,001.08; county, $350,287.60; general school, $61,049.33; interest on county bonds, $429,279.72; library tax, $3,742.92; judgment and State deficiency, $7,673.25; special school, $178,787.58; payment of school-bond interest, $17,484.15; payment of county bonds, $51,278.72. Total, $974,576.70.

State Lands.—The rentals for State lands increased from $86,018 in 1901 to $92,357.09 in 1902. The receipts from sale of State lands given by Congress decreased from $22,095 in 1901 to $5,549 in 1902. The State owns 3,001,903.48 acres of school sections. Of this amount 1,297,001.36 acres have been leased.

Irrigation and Agriculture.—In 1902 3,415 miles of new ditches were constructed in the State, at a cost of $1,873,284, and nearly 1,000,000 acres of land were reclaimed. Numerous agricultural products were valued at $4,275,000. Fruit orchards yielded handsome profits for the first time, and fruit-growing is now well established. There was produced in the State 21,000,001 pounds of wool, valued at $3,900,000.

Mining.—The year was a banner year in copper-mining; although the output did not exceed that of 1901. Many new mines were opened up, however, and these properties are now ready to produce the red metal. Probably the most important event in the State's mining history was the completion of the Southern Wyoming Aerial Tramway, from the Ferris-Haggarty copper-mine at Battle Lake to Grand Encampment, 16 miles, It being the longest aerial tramway in the world; and the completion of a 500-ton concentrating and smelting plant at Grand Encampment. These improvements cost approximately $1,000,000. The Standard Oil interests purchased heavily in the Wyoming copper lands in the fall of 1901, and now own many of the copper-producers. The output of copper was valued at $1,700,000; iron, $413,000; silver, $500,000; gold, $783,000; platinum, $3,100; soda ash, $500,000; coal, $2,000,000. The total value of the mineral output was $9,555,278.25.

Much progress was made in the development of the coal-fields. In the Uinta fields 15 drilling-rigs were in operation, and 4 flowing-wells were established; in the Popo-Agie fields 2 producing-wells were added to the number, making 8 all told; in the Salt Creek fields 3 more producing-wells were secured, making 12 there; in the Bonanza fields a lubricating oil even richer than that found in the Uinta fields the previous year, which was pronounced the richest oil ever found in the world, was discovered. One well was drilled and a strong flow of oil encountered at a depth of less than 1,000 feet. English and other foreign syndicates are securing large tracts of oil-land in the State and have already begun operations.

URUGUAY, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 19 members, elected for six years in the departments which they represent by electoral colleges, and a House of Representative, elected by the voters in each electoral college for three years by the votes of all adult male citizens who can read and write. The President of the republic is elected for four years. Juan Lindolfo Cues-tas was elected President for the term beginning March 1, 1896. The Vice-President is Juan Carlos Blanco. The Cabinet at the beginning of 1902 was composed as follows: Minister of War and Marine, General B. Gómez; Minister of Interior and Justice, Eduardo McEanch; Minister of Agriculture, Industry, Public Instruction, and Public Works, Gregorio L. Rodríguez; Minister of Finance, Diego Varela; Minister of Foreign Affairs and Worship, Dr. German Roosen.

Area and Population.—The area of Uruguay is 72,110 square miles. The population was estimated on Dec. 31, 1900, at 930,860. The cotton growers are enumerated in the imperfect census of March 1, 1900, 24,720 were Brazilians, 24,349 Italians, 23,532 Spaniards, 9,140 Argentinians, 4,186 French, 994 Swiss, 708 Germans, and 491 of French extraction.

Finance.—The revenue in the year ending June 30, 1900, was $15,209,024 in silver. The revenue for the financial year 1902 is estimated at $10,100,000, of which $10,000,000 comes from customs, $1,259,000 from a property tax, $234,000 from trade licenses, $786,000 from factor taxes, $431,000 from internal revenue, $815,000 from stamps, $200,000 from bank profits, $234,000 from posts and telegraph, $51,000 from postal savings, etc. The expenditure was estimated at $16,160,996, of which $371,833 were for Congress, $65,576 for the Presidency, $144,400 for the Ministry of Foreign Affairs, $2,101,979 for the Ministry of the Interior, $898,292 for the Ministry of Finance, $1,130,336 for the Ministry of Public Works, $1,750,322 for the Ministry of War and Marine, $394,130 for judicial expenses, and $9,451 for national obligations. Extra 24 per cent. import and export duties have been imposed to raise means for improving the port of Montevideo, but they do not figure in the budget, nor does the receivers enumerated in the imperfect census of March 1, 1900, 24,720 were Brazilians, 24,349 Italians, 23,532 Spaniards, 9,140 Argentinians, 4,186 French, 994 Swiss, 708 Germans, and 491 of French extraction.

Commerce and Production.—The raising of cattle and sheep is the main industry, but agriculture is advancing. The exports of wool in 1900 were 39,827 bales, about 246,827 tons; of corn, 486 tons; of wheat flour, 18,129 tons. The production of wine was 23,541 hectoliters. The yield of gold in 1899 was 96 kilograms. The total value of merchandise imports in 1900 was $23,978,203 in gold, and of exports $29,388,187. The durable imports were $22,678,064 in value out of a total importation of $25,532,786 in 1899, and $33,958,940 out of a total exportation of $35,958,940 in 1899. The export of merchandise amounted to $574,164 paid duties. The duties collected in 1900 amounted to $9,433,269. The imports of articles of food and drink in 1900 were valued at $7,521,518; of tobacco, $210,421; of textile goods, $4,106,063; of clothing, $1,302,443; of raw materials and machinery, $7,253,877; of miscellaneous merchandise, $3,584,081. The exports of live animals were valued at $534,516; animal products, $28,620,926; agricultural products, $1,669,617. The exports of jerked beef were $6,042,345 in value; of extract of beef, $1,319,157; of hides and skins, $3,183,057; of tallow, $1,001,796; wool, $2,350,000, etc. The value of coin in 1900 were $1,533,388 and the exports were $3,054,052. Of the total imports in 1899 $21,870,978, and of the exports $23,340,239, passed
through the port of Montevideo. In 1901 there was a small decrease in imports, the total value being $23,601,652, compared with an average of $24,850,000 for the preceding six years. Exports declined to $27,731,126 owing to a failure in the wheat-crop and a fall in the price of jerked beef in Brazil.

Navigation.—The number of vessels engaged in foreign trade entered at Montevideo during 1900 was 1,206, of 5,318,654 tons; cleared, 1,083, of 2,065,733 tons. In the coasting and river trade the number entered was 2,029, of 507,110 tons; cleared, 2,063, of 508,980 tons. Work on the improvement of Montevideo harbor began in July, 1901.

Railroads, Posts, and Telegraphs.—The railroads have a total length of 1,080 miles. The cost of construction was $21,110,887, of which $25,750,418 has a guarantee of 4 per cent. interest from the Government, covering 882 miles.

The telegraph lines in 1899 had a length of 4,625 miles, including 1,030 miles of railroad telegraphs. The post-office forwarded 10,814,176 letters, 310,324 postal cards, 39,190,625 printed enclosures, and 1,436,889 parcels in 1900.

Political Affairs.—President Cuestas, who, unlike his predecessors, has not added to the public debt, began in 1901 to curb the ambition of military politicians aspiring to play a part in the next administration by enforcing discipline in the army. The commercial and industrial development of the country is hampered by the enormous foreign debt incurred for wasteful and extravagant purposes, the interest of which is a heavy drain on the country's resources, represented by an average annual adverse balance of trade of $7,500,000. The heavy import and export duties cripple external commerce. The harbor works at Montevideo are being pushed forward. In July 2 Senators were ordered to be banished and several military officers to be arrested on a charge of plotting the assassination of the President. The Senate protested against the unconstitutional violation of parliamentary immunity. The President justified the decree as necessary for public safety, and promised to communicate the details of the conspiracy to the Chambers as soon as the inquiry was completed. The Chambers demanded an immediate full explanation of his illegal action. The Government then withdrew the decree of banishment and set the officers free without presenting any proofs of the alleged conspiracy. Señor McEachen resigned from the Cabinet to become president of the Bank of the Republic and on Oct. 10 Diego Pons left the Ministry.

UTAH. (See under UNITED STATES.)

VENEZUELA, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 40 members, 2 from each state, elected for four years by the state Legislatures, and a House of Representatives of 55 members, elected for four years by the popular vote, 1 Representative to 35,000 of population. The President is elected for two years by the Federal Council of 19 members, who are elected for the presidential term by the Congress. Gen. Cipriano Castro, appointed provisional President in October, 1899, was in due form elected President of the Republic in October, 1901. The Cabinet was appointed on April 10, 1901, was composed as follows: Minister of the Interior, Gen. J. A. Velutini; Minister of Foreign Affairs, Dr. Eduardo Blanco; Minister of War and Marine, Gen. Genoves Casas; Minister of the Treasury, Ramon Tello Mendoza; Minister of Public Instruction, Dr. Felix Quintero; Minister of Public Works, Juan Otañez; Minister of Fomento, Gen. F. Arocha Gallegos. An act for the reestablishment of the 20 states, which were reduced to 8 in 1864, was passed in 1899, and provision was made for their autonomous administration until the new federal Constitution is completed.

Area and Population.—The award of the Court of Arbitration given on Oct. 3, 1899, reduces the area claimed for Venezuela by about 60,000 square miles, which are now included in British Guiana. The Schomburgk line was adopted as the boundary except at coast, where the line starts from Punta Playa, instead of at the mouth of the Amakuru, thus giving to Venezuela the lower Barima river; and at the Cuyuni river, where the boundary ascends the Waramu, instead of following the Cuyuni up to its source, thus giving to Venezuela the Cuyuni gold-fields. The total area of the republic is estimated at 593,943 square miles. The population at 2,444,818.

Finance.—The revenue is collected and disbursed by a Department established by Congress, for five years, by the Bank of Venezuela, which receives a commission of 2 per cent. on money collected and on disbursements and makes advances to the Government up to 6,000,000 bolivars at 8 per cent. interest.

The consolidated external debt on July 31, 1901, amounted to $2,638,200, besides $257,224 of unpaid interest. It consists of Venezuela's share in the old debt of Colombia, the share amounting originally to $2,794,796, converted in 1881 to $2,750,000 of new consolidated bonds. Besides this debt 48,920,000 bolivars of bonds for the settlement of arrears of railroad guarantees were issued at 5 per cent. in 1896, equivalent to $1,939,000, on which $336,534 of interest were due, making the total for 1899 $2,871,140. The internal debt amounted to 110,000,000 bolivars, besides 10,175,000 bolivars for water-works at Caracas.

The Army and Navy.—The permanent army was reorganized under President Ramon Tello in 1896. The military forces consist of 300 men, which were stationed in 20 towns and in other federal posts and on the ships. Every Venezuelan between the ages of eighteen and forty-five years is enrolled in the militia, and in times of civil war as many as 60,000 men have been called into the field. The naval force consists of 3 steamers and several small gunboats.

Commodore and Production.—Sugar, coffee, cacao, and grain are cultivated in the coast regions, live stock grazes on the rich pastures farther inland, and from the forests of the remote interior are brought down rubber, copal, vanilla, tonga beans, and other tropical products. The live stock is estimated at 191,079 horses, 89,186 mules, 312,210 asses, 2,004,357 cattle, 176,668 sheep, 1,647,272 goats, and 1,618,214 hogs. The exports of coffee in 1900 were 10,300,505 kilograms from La Guaya, 14,965,724 kilograms from Puerto Cabello, 13,107 kilograms from Ciudad Bolivar, and 29,829,464 kilograms from Maturín; of cacao, 7,566,180 kilograms from La Guaya, 525,187 kilograms from Puerto Cabello, 39,481 kilograms from Ciudad Bolivar, and 184,456 kilograms from Maturín; of hides, 7,524,578 kilograms from La Guaya, 630,363 kilograms from Puerto Cabello, 1,495,937 kilograms from...
indemnification of losses incurred during the civil wars, amounting to 1,500,000 marks. These claims, analogous to the French, the President appointed a commission to examine, and also similar claims of Americans, Frenchmen, and Italians. There were other claims for goods supplied by German merchants. Lastly, there was the defaulted interest on the loan of 50,000,000 francs, about one-third of it held by a German banking institution, while the remaining third was divided equally between French and British capitalists. The loan could not be placed on the market because in 1896, when Venezuela failed to meet its obligations. The interest and sinking-fund in arrears amounted to over 9,000,000 francs. Germany and the other countries interested declined to recognize the jurisdiction of President Castro's commission. The German Government recognized as valid about 40 claims for losses in the revolution of 1896, amounting to 1,700,000 francs. The damage arose from the failure of the Venezuelan Government to pay for goods supplied to the troops, from requisitions made in war time, from footing, and from forced loans. On Jan. 20, 1900, Germany, in accordance with the claim submitted to the Venezuelan Supreme Court. This commission rejected some of the claims as baseless. Damages suffered prior to May, 1896, it refused to recognize on the ground that the party of President Castro had committed them and the present Government was not responsible. It also proposed payment in a revolutionary loan. Germany refused to accept the decision. Early in 1902 the Venezuelan Government passed another law, but it was open to the same objection. The Venezuelan Government took the ground that money claims of foreigners must be decided by Venezuelan laws on the same basis as claims of Venezuelan citizens. The German Government declared that if a diplomatic settlement was precluded it would examine the claims of Germans for itself and demand payment of those that it found just. President Castro said that a special act of Congress would solve the difficulty and offered to pay the claims before Congress. The German Government declined to submit them to the Venezuelan Court, having investigated them and demanded payment of the total amount. In the disturbances of 1901 and 1902 damages have been suffered to the amount of 3,000,000 francs falling on Germans. Great Britain, Italy, the Netherlands, Spain, and the United States united with Germany in finally rejecting the decree of January, 1901. While Germany was pressing the claims of her citizens in the spring of 1902 several German war-ships were sent to the coast of Venezuela. At the approach of summer they went to more salubrious stations.

Quarrel with England. — President Castro has had chronic difficulties with the British authorities of Trinidad growing out of the smuggling trade that is rendered profitable by the high import duties and the still more profitable trade in contraband of war and transport for revolutionists. The low island of Patos, between Trinidad and the Venezuelan shore, a convenient base for smuggling, was claimed by Venezuela, but Great Britain disputed the claim. In January, 1901, the Venezuelan revenue officers seized a boat-load of goods from a Trinidad fisherman who ran in theory to escape the duties in Venezuelan waters. A sloop was seized and burned. Another sloop loaded with valuable goods took refuge in Patos in August, 1901, and the crew buried the goods, but the revenue officers landed and seized them and arrested the crew. In January, 1902, a British sloop was seized and detained in the Barima river. In May a British vessel suspected of filibustering was destroyed by a Venezuelan gunboat in the harbor of Pedernales. Later a vessel believed to have landed a cargo of arms was chased and captured on the high seas, taken into port, and confiscated. In each case the British Government demanded explanations, and would not accept such as were offered nor acknowledge that the islet of Patos was Venezuelan territory. In cases where the Venezuelan Government could not defend its officers it put off discussion till a more convenient opportunity. On July 27 the British minister to Venezuela recited all the incidents complained of and intimated that unless Venezuela gave assurances that no such unwarrantable acts would recur and promptly paid compensation his Government would take steps of a serious character. The Venezuelan minister on Aug. 2 replied that the incidents on the island of Patos were already disposed of, Venezuela having established her rights to the island and proclaimed its neutrality. Great Britain based on legal grounds, and that the rest were settled or on the way to a settlement, but when the Ban Righ committed her inhuman and illegal acts Venezuela showed open partiality in a sense hostile to the peace of Venezuela the President decided to postpone dealing with these matters until he should receive an answer to the extraordinary circumstances he had laid before Great Britain in consequence of the attitude of the British authorities in connection with that vessel. These remonstrances were contained in notes presented on Feb. 28, March 8, March 13, and April 3. The British note complained of conduct of the Venezuelan consul in Trinidad, and that the Venezuelan government had been in communication with Great Britain on the subject of theagrarian reforms in connection with the partiality of the colonial authorities. On Nov. 11 the Venezuelan Government was informed that if it persisted in its refusal to discuss the complaints the British Government would be obliged to consider what steps should be taken for the protection of British interests. The Venezuelan reply, dated Nov. 15, expressed regret with regard to the Ban Righ and the attitude of the Trinidad authorities had not been examined and called attention to the eagerness of the British Government to discuss matters that were of secondary importance when contrasted with the interest felt by Venezuela in obtaining recognition and respect for claims arising from the grave injuries caused by the Ban Righ and the facilities afforded to the revolutionaries by the colonial authorities in Trinidad, which claims have been met by a most unfair refusal of the British Government to consider the matter. The British flag was raised in September over the island of Patos, which is about a mile long and a third of a mile broad and is uninhabited, but has been a resort for smugglers and fishermen. The Venezuelan Government protested against this, reiterating its claim by sovereignty over the island. On Dec. 2 the British minister at Caracas presented a peremptory demand for the satisfaction of British claims. The British Minister of Foreign Affairs, Dr. Lopez Baralt, in his reply again complained that reparation was not made for the injury inflicted by the Ban Righ and stated that, the Venezuelan Minister of Foreign Affairs was impossible for the moment for the Government to meet its debts, but as soon as peace was reestablished in the country it would not be nec-
soldiers who attempted to reestablish traffic were driven away by the rebels, which halted the progress of the train. The conflict continued at Barcelona. Insurgents rose in the vicinity of Caracas and began a fight on Sept. 5 with the Government troops. The advanced guard of the revolutionary army, consisting of 400 men, under Generals Mendoza, Batalis, and Riera, were met Sept. 11 by 4,100 troops under Gen. Garrido, who had succeeded Gen. Guerra as Minister of War. When the insurgents had taken Angelourt and other intermediate towns the Government authorities took forcible possession of two steamboats of the American company to serve as transports. When 1,100 rebels advanced to take Cumaná the garri son of 300 men retired. The revolutionists collected the customs at Bolivar, Cumana, Cano, Colorado, Guaira, Coro, and Bar celona. They received a large shipment of Maunin guns and ammunition and some field-guns from Germany. They cut the English railroad near La Guayra. Wherever the revolutionists held a seaport President Castro declared it closed and proclaimed a blockade. His gunboats were under Gen. Mendoza, a blockade of even one port, and therefore the British and German governments refused to recognize any blockade, and their cruisers protected vessels trading with the ports and in the Orinoco river. The rebels at Barcelona attempted to force a loan from the American consul, who is a Venezuelan citizen, but were intercepted when the American naval authorities interfered for his protection. Telegraph communications in the interior were blocked by them since early in the rebellion. The Government arrested the employees of the French Cable Company at Caracas and cut the cable. President Castro issued a proclamation denouncing Gen. Mato as a traitor who offered to hand over the financial administration of the country to foreign capitalists and ordering him to be tried as a private. While Gen. Matos advanced to Camatagua, in the state of Miranda, 50 miles south of Caracas, intending to form a junction with Gen. Ocampo, who had till now avoided a pitched battle and succeeded in harassing and wearing out Castro's troops, Gen. Mendoza had arrived at Tucuyito with 2,000 men. Gen. Castro, who was at Ocumare, concentrated his troops, withdrawing those that were posted to stop Ma tos, and with a force of 3,000 men he marched against Caracas. Gen. Mendoza thereupon retreated toward Villa de Cura. Valencia was saved from falling into the hands of the insurgents, but the stragglers only delayed matters. Gen. Matos, finding the way clear, marched through Ocumare and San Sebastian, hoping to effect a junction with Mendoza near Villa de Cura. Gen. Castro earlier succeeded in joining forces with Gen. Garrido and had an army as strong as that of the veteran Gen. Luciano Mendoza, whom he feared more than Gen. Matos. Gen. Mendoza attacked Castro at La Victoria, and there was savage fighting that lasted a week. Gen. Gomez arrived with reinforcements for Castro on the second day. The wounded perished without care under the tropical sun. The revolutionary army numbered about 8,000, Castro's not quite so many. After many hundreds had been killed on both sides Gen. Mendoza on Oct. 17 abandoned his positions and retreated. Gen. Ocampo, however, continued his advance and, with his own courage and energy. The rebels received reinforcement on the fourth day and completely fell La Victoria, which would have fallen if the Government forces had not received fresh ammunition by railroad. The rebel losses were reported to be 1,000 in killed and wounded, and those of the Government side 1,400. The rebels attacked Caracas and retreated after a hard fight. President Castro still remained at La Victoria with 5,000 men. The revolutionists returned and renewed the attack. When Vice-President Gomez withdrew all the troops from Caracas, the seat of government was transferred to a provisional capital in the Guacaipuru district. It is the custom of Venezuelans in their civil wars to spare their beautiful capital. The revolutionists had about 10,000 troops cantoned at San Sebastian, San Juan de los Moros, Cua, Ocuma, and Villa de Cura, forming a ring of stations around Caracas. Deserti ons had greatly reduced Gen. Castro's forces, but he still had a formidable and trustworthy force in his 5,000 Andine troops. The revolutionists succeeded in cutting communications between La Victoria and Caracas and destroying the railroad. They attempted to take Los Teques, but were repelled. Soon after they were placed on the map of the rebel strongholds that they were short of ammunition, began to press them, and drove them from several of their positions. The rebel troops posted in front of La Victoria were routed and pursued toward Guarico. The bodies commanded by Gen. Riera and Gen. Mendoza dissolved on the approach of the Government troops. The whole organized rebel army broke up into guerrilla bands that disappeared on the appearance of the Government troops. Gen. Matos fled to Curico. Gen. Rolando kept 900 men together, with whom he fell back on Laezama. The ministers returned to Caracas. President Castro's troops reoccupied Coro and Cumana. Ciudad Bolivar was still held by Gen. Ferrera and Barcelona by Gen. Pablo Guzman. An armistice was declared after Barcelona had been recaptured.

**French Claims.**—Before the Matos expedition was fitted out the French claim of indemnities for maltreatment of French citizens during the revolution of 1892 were brought once more to the attention of President Castro's Government, which was anxious to re solve diplomatic relations. France made the claims that had caused a rupture in March, 1895, fearing that France would impose duties on cacao by way of reprisal. A protocol was signed relating to the resumption of normal diplomatic intercourse, a treaty of commerce and navigation with the favored-nation clause was negotiated, and an agreement was made referring the claims of French citizens to the arbitration of Senor Leon y Castillo, Spanish ambassador at Paris, acting with one representative of each of the two countries. The protocol was ratified on April 18. Claims to the amount of 2,000,000 francs antedating the last revolution were excluded from the arbitration. The claims to be determined and settled amounted to 54,000,000 francs, including 18,000,000 francs for the railroad running from Maracaibo, which was practically destroyed. It was proposed to assign the receipts of one or two custom-houses to the payment of these debts. Property losses were deemed urgent in demanding the satisfaction of the claims of German citizens. There were claims for
manded their surrender. The Venezuelan officers and crews left the vessels, which were then towed outside. The Gen. Crespo, the Totumo, and the Margarita the Germans sank in the night. The reason given was, they were not sufficiently seaworthy to undertake the voyage to Trinidad alone, while to tow them thither would impede the freedom of action of the German fleet. The German ships Falko and Panther were then steamed away to Carupano to seize the Venezuelan vessel that was blocking the mouth of the Orinoco. This blockade the British and German defied after officially pronouncing it null, before coercive steps were taken in the matter of the claims, by sending war-vessels up the Orinoco river, against which action President Castro formally protested. The representatives of France and Italy joined in the declaration that the blockade was ineffective, but the United States minister declined to identify himself with them in its notice. The President replied to the seizure of the fleet by arresting all the British and German residents in Caracas, and such was the spirit of resentment for the aggressive acts of the two powers that in their citizens with the moment safer in prison than in their homes against the mob which damaged the German legation building and some European property. The President ordered the imprisonment of British and Germans in the country, but on the urgent remonstrance of Mr. Bowen he released them on the following day and had them escorted to ships that took them away. The German frigate that had been chartered by the Venezuelan Government, was the only vessel found at La Guayra that was sunk by the allies. The Venezuelan flag-ship Bellivar was seized at Port of Spain. On Dec. 10 the troop-ship Zamora was taken, and on Dec. 12 the gunboat Restaurador, formerly the American yacht Atlanta, was seized at Guanta. The ship Topaze at Puerto Cabello was compelled by a mob to lower the British flag. The commander of the British cruiser Charybdis demanded reparations. Before receiving a reply he shelled the forts, which responded feebly. When the guns were silenced a landing party destroyed with dynamite and fire the Libertador Castle and made a prisoner of the commandant. In retaliation the towns of the English harbor corporation at La Guayra were threatened with violence by a mob and also with arrest by Venezuelan soldiers before British musketry could be brought to bear on the Italian soldiers. The Italian Legation had examined the claims of Italians for compensation and pronounced claims amounting to $306,000 francs to be valid. The Italian colony in Venezuela numbers 7,000 persons. The Venezuelan Government did not anticipate coercive action from Italy because, in the treaty concluded with that country on June 19, 1861, it is stipulated that in case of claims for damages arising out of revolutionary acts Italians shall receive the same treatment as that accorded to Venezuelans. President Castro, in appealing for the diplomatic intervention of the United States, complained because the powers had acted before they had resorted to the Venezuelan courts for a decision on their monetary claims, which were insignificant in amount and entirely disproportionate to the efforts made to collect them by force, and because they had proceeded to hasty and violent measures before the resources of diplomacy were exhaustible. The government of all the allies by the Venezuelan tribunals have in many cases obtained awards. The Venezuelan Government contended that it is a recognized principle of international law that when the courts of a country are open to claims for damages against the Government, diplomacy shall not be resorted to until the claims have been presented to the court and there has been a manifest denial of justice or unusual delay or a violation of international law. This doctrine was accepted by the delegates to the Pan-American Congress at Mexico. Another principle of international law that Germany and Great Britain set at naught for bids armed intervention for the collection of public debts or guaranteed interest. Italy determined to join in the naval hostilities, and sent the cruiser Giovanni Bausan. The Italian minister to Venezuela on Dec. 13 forwarded an ultimatum analogous to those presented by Great Britain and Germany. Italy first proposed to Germany and Great Britain to be associated with them in the measures they were about to take, and in any arrangements that might be made, as the claims of Italians were of the same nature as those pressed on behalf of Germans and British. This proposal was favorably received. Commodore Schedler selected La Guayra as the center of the movements of the German ships of the more distant part of the coast and neither was responsible for the acts of the other except when they acted in concert. The squadron sent by Great Britain under Admiral Douglas was much the stronger, having a tonnage of 26,000 tons and 1,700 available men in the crews. The Italian naval force arrived on Dec. 16. The United States commanded two squadrons to observe developments and to be ready to defend American interests or protect American lives and property, consisting of the Reasarge, Alabama, Massachusetts, Iowa, and Scorpion, under Rear-Admiral Higginson, and the Chicago, Newark, and Eagle, commanded by Rear-Admiral Summer. After a few days most of the vessels returned to their station in Porto Rico. A wave of patriotic enthusiasm swept over Venezuela. All citizens fit for military duty enrolled themselves in the militia, even those belonging to the revolutionary party. The people everywhere pledged themselves to buy no British or German goods while the differences remained unsettled and foreign military forces menaced Venezuela. When the news that the towns of Cabildo reached the capital 10,000 men surrounded the Government building clamoring for arms to repel the invaders. The Government ordered the enrollment of the men of the cities and regions of eighteen and forty-five, and Gen. Ferre formed an entrenched camp between La Guayra and Caracas, which was occupied by 3,000 troops under the Minister of War and Gen. Modeo Castro. President Castro issued a proclamation granting amnesty to all political offenders and restoring confiscated estates. The Venezuelan consul at Port of Spain in Trinidad closed his office and departed. The German cruiser Panther attempted to enter the harbor of Maracaibo to take out the only war-ship not yet seized, which was moored along the wharf. Gen. Bello, the commandant at the old Spanish castle of San Carlos, fired a warning shot. The German vessel did not go in and take the Venezuelan vessel until the Vineta, Falko, and Panther of the German squadron shelled the fort. The old guns of the Venezuelans responded and did some damage to the nearest German vessel. The vessels departed, but returned next day with 12 guns to shell the fort. The village of San Carlos was destroyed, and some of the inhabitants were killed. On Dec. 12 President Castro requested Minister Bowen to arrange a settlement with the allies.
A blockade of the coast of Venezuela was declared on Dec. 20. The Germans blockaded the ports from La Guayra to the Colombian frontier, and the British cut off the mouth of the frontier of Demerara. The American merchant steamer Caracas, which had started on a voyage to La Guayra, was permitted to enter the port, but before half the cargo was discharged the German naval authorities on Dec. 23 compelled her to leave. On the same day the British, German, and Italian Cabinets, to which the Venezuelan proposal to arbitrate had been transmitted from Washington with an offer of the good offices of the United States, accepted arbitration in principle. The powers consented to arbitration of their claims by The Hague tribunal, subject to certain conditions which it was first necessary to discuss. When the proposal was first made through Minister Bowen the British and German governments at the suggestion of Germany offered to submit the whole dispute to the arbitration of the President of the United States. President Roosevelt was urged by them to undertake the task, but on Dec. 27 he definitely declined and suggested the International Court of Arbitration at The Hague as the proper tribunal. The American minister to Venezuela, who left Caracas on Jan. 13, was driven to Washington on Jan. 20, conducted the negotiations with Count Quad, the German chargé d'affaires at Washington, Sir Michael Herbert, the British ambassador, and Sir Manuel Echeverria, the Italian ambassador. Baron Speck von Sternburg soon arrived to take charge of the German negotiations. The claims for which guarantees were demanded amounted to 31,000,000 francs. The German claims were 8,750,000 francs, the English 22,500,000 francs. The blockade was seized and hostages taken in accordance with the laws of neutrality, and the captured ships were moored at Margarita island. Italy sent a second ship and undertook the blockade of the coast of Tacarigua and Coro. Mr. Bowen, after his arrival in Washington, suggested that the blockade should be lifted by the plenipotentiary of the Venezuelan Government, an office he was authorized by the State Department to assume for him. The British, German, and Italian representatives at Washington. This proposal was promptly accepted by the three powers. The chief conditions made by the allied governments were cash payments of their claims of the first line and adequate guarantees for the settlement of the others. Mr. Bowen proposed that all countries having claims against Venezuela should have share in the proceeds of the customs duties, which have been the chief source of revenue for the Venezuelan Government, and hence were the only satisfactory guarantee Venezuela could offer President Castro offered to pledge a sufficient proportion of the customs receipts on condition that all the foreign claims should share pro rata. In satisfaction of the demands of immediate cash compensation for acts of violence he offered to raise a certain sum of money covering a part of the claims. Germany, supported at first by England, demanded that the cash claims should be paid out of the receipts of the customs houses at La Guayra and Puerto Cabello before any other debts. Italy supported Germany throughout. To give claims asserted by force a priority over those settled by diplomacy Mr. Bowen contended would encourage warlike action in the collection of claims. The British minister, who had taken umbrage at the suggestion of Minister Bowen that this would mean a continuance of the Anglo-German alliance, was compelled to yield this point. Objections were made on behalf of France, who contended that her claims were already settled and payment arranged for. Mr. Bowen's proposal was that 30 per cent. of the customs revenues of the ports of La Guayra and Puerto Cabello be set apart as a fund for the liquidation of claims made by all foreign governments against the Government of Venezuela. This was separate from and in addition to a fund of 13 per cent. of the customs revenue of all the ports to be applied to the payment of the prior claims of France and some other nations which anticipated the Castro administration and had been adjudicated and arranged previously. The proposal contemplated the supervision of the customs administration by officials appointed by Belgium, a neutral power having no navy, which had a large aggregate of pecuniary claims. Other creditor nations, besides Belgium, France, England, Germany, and Italy, are Spain, Norway, Sweden, Netherlands, and the United States. When the representatives of the three powers insisted that the 30 per cent., or a part of it, be applied directly to the payment of the claims of other powers were paid Mr. Bowen proposed to refer the question of the preferential treatment to The Hague Court of Arbitration. The ambassadors suggested arbitration by President Roosevelt, who again declined to act. The claims for which the 13 per cent. of the customs duties was reserved amount to 70,000,000 francs. No payments had been made for a year. France filed additional claims amounting to 65,000,000 francs, and Belgians claimed 56,000,000 francs. Venezuela offered to pay each of the blocking powers as an evidence of good faith $27,500 on the day when the blockade is raised. Great Britain was willing to accept the final offer, and to let the question of preference be decided by The Hague tribunal, but Germany and Italy still held out for a percentage of the customs revenue to be reserved for the satisfaction of their original cash demands, amounting to $340,000, of which Germany and Italy finally agreed to accept a cash payment of $5,500 each. The German Cabinet insisted on $340,000, which Mr. Bowen conceded under protest, and that payment of $250,000, the blockade shall be lifted immediately. Venezuela shall at 30 per cent. of the customs of the two ports for the payment of claims to all countries, which money shall accumulate until the court of The Hague decides the question of preferential treatment and until all claims have been adjudicated, when pro rata payments shall begin and continue monthly. If Venezuela defaults in the payment of one instalment Belgium shall administer the customs at the two ports until all claims as adjusted by mixed tribunals shall be satisfied.
Ciudad Bolivar, and 335,039 kilograms from Maracaibo. There were 1,253,342 kilograms of rice sent from Ciudad Bolivar, and 43,311 kilograms of tobacco; 18,774 head of cattle from Puerto Cabello and 6,496 from Ciudad Bolivar; 35,189 kilograms of goat- and deer-skins from Ciudad Bolivar; 838,128 kilograms from Puerto Cabello; and 125,866 kilograms from Maracaibo; 53,822 kilograms of copra from Puerto Cabello; 5,421,530 kilograms of fustich, 1,781,012 kilograms of dividivi, 4,090 kilograms of cinchona bark, 36,587 kilograms of copaiba, 42,901 kilograms of fish sounds, and 274,533 kilograms of sugar from Maracaibo; and 1,316 kilograms of gold bullion, valued at $589,000, from Ciudad Bolivar. Feathers for millinery are an important article of export. The principal imports are provisions, textiles, hardware, coal, petroleum, timber, and machinery. Coffee is exported to the United States, France, and Germany; cacao to France, Spain, and Germany; hides to the United States; rubber and feathers to Great Britain.

Navigation.—Maracaibo was visited in 1900 by 403 vessels in the foreign trade, Puerto Cabello by 262, La Guayra by 205, Ciudad Bolivar by 73.

The merchant marine in 1900 consisted of 18 sailing vessels, of 2,836 tons, and 12 steamers, of 2,567 tons.

Railroads and Telegraphs.—There are 329 miles of railroads. A new line to connect Yaritagua with Puerto Cabello was contracted for in 1899. The telegraphs have a length of 3,882 miles.

Invasion began in the beginning of 1902 for the overthrow of President Castro was headed by M. Matos, the wealthiest of Venezuelans, who purchased the British steamer Ban Righ, loaded her in Europe with rapid-fire guns for her own armament and field-guns, many thousand rifles, and a vast quantity of ammunition for the army. A large force embarked at Trinidad; the steamer was converted into a warship bristling with guns, her name changed to the Bolivar, and after she had sunk the only serviceable vessel of the Venezuelan navy near Castaño, Matos left to capture her. Matos could land his expeditions at any part of the Venezuelan coast that he desired and bring all the supplies he wanted from Trinidad. Castro had no force in the country ready to join in the insurrection. The forces of Matos consisted of 15,000 men, divided into 25 sections. They occupied the strategic positions where the Government was weak, and in various ways made the country ready to join in the insurrection. The forces of Matos were at Curao, and threatened to advance on Caracas from the Cumaná district and from the Colombian border. Revolutionists rose in bands in many places. When the expedition arrived on Jan. 2 and landed 6,000 Mausers the Government force of 500 men at Coro joined the rebel Generals Urbania, Fernandez, and Garcia. Generals Guzman, Monorges, and Patero, of the revolutionary army, had their way in Carabobo and Guarico. Generals Batalla and Fernandez Cedeno rose against the Government, and the latter twice defeated the Government troops in Carabobo. Gen. Vasquez headed a successful rising at Carupano. The Government troops had difficulty in putting down an insurrection in Maracaibo. The rebels were victorious near Barquisimeto. A severe engagement was fought without result near Uchire. Contributions were levied on foreigners by the authorities in various places. Many peripherals were taken and General Pulido and Urbanage, were arrested at Caracas. On Feb. 27 the Venezuelan Congress elected Gen. Castro as President for another term of six years to begin on Feb. 20. An invasion from Colombia under Rangel Olivera and 4,500 men was attacked near La Guayra. President Castro sent troops to meet the revolutionists who laid siege to Barcelona, Carupano, and Cumaná, and held the port of Tucacas. The revolutionists, who numbered 3,540 men, defeated Gen. Escalante on April 3 near Carupano, where he lost 350 men. On the following day he was attacked and routed near El Pilar. The rebels took Barquisimeto. Gen. Ramon Castillo with 2,200 men marched out against them. He was attacked on April 22 near San Antonio, and fatally wounded in the beginning of the engagement, upon which the newly levied troops of his force deserted to the enemy and the others retreated. The Government forced every able-bodied man into the army. Gen. Vincente Gomez led a third army against the rebels at Carupano, which was attacked on May 6 by sea and by land. He also was wounded and his troops were routed on May 6, losing 115 dead and 210 wounded. The Government gunboats shelled the town without the usual notice in spite of the protests of the foreign residents. A new invasion was aided by the Colombians, and 4,000 men crossed the border. The revolutionists captured a Norwegian steamer to carry troops and munitions from Baranacos to Bolivar, and afterward the vessel was attacked and Capt. Meling killed by Government troops. A Greek steamer was attacked by a band of revolutionists on June 7, and the Government forces shelled them from the forts and the warship Miranda, compelling them to retire. Gen. Matos had this at the time, fully organized and equipped, and he began a systematic advance on Caracas. In June he issued a proclamation in which he announced the President, Pedro Ezequiel Rojas as Minister of Foreign Affairs, and Generals Perez and Pedro Duchain as commanders of the armies in the field. The 30 per cent. duty was declared abolished with regard to West Indian imports. He moved with 3,000 men to Uricia, leaving 3,000 still in the State of Bermudez. Coro was held by Vice-President Ayala with a strong force, but on June 26 he capitulated. Insurgents fought the Government troops in the streets of Barcelona early in August and captured the town, killing Gen. Bravo. On both sides 8 generals, 23 colonels, and 167 men were killed and many houses were destroyed. German, Italian, British, and American warships were at La Guayra, and threatened war, as the revolutionists were active. The commanders were ordered to send vessels to Barcelona, where the insurgents were sacking the stores of foreign merchants and did not spare the foreign consulates. Ciudad Bolivar was blockaded by Government vessels. Germany, Great Britain, and France protested against the blockade on the ground that it was ineffective. By the middle of August the revolutionist party obtained possession of Puerto Cabello. The Government forces after a bombardment took Carupano. Ciudad Bolivar was next bombarded. The Restaurantador advanced into close range before firing, flying the American flag. For this Minister Bowlow demanded and received an apology from the Venezuelan Government. On Aug. 22 about 700 rebels entered Carupano and fought all day with 1,000 Government troops under Gen. Velutini. On Aug. 28 the advance guard of the revolutionary army attempted to take Barrancas, but was repelled with a loss of 290 men. The rebellion made progress, however. The German railroad was cut, and no
soldiers who attempted to reestablish traffic were driven away near Los Teques, which the rebels captured. On Aug. 29 they were joined near Ocumare by 550 soldiers, who brought their general as a prisoner. Gen. Matos long made his headquarters at Barcelona. Insurgents rose in the vicinity of Caracas and had a fight on Sept. 5 with the Government troops. The advanced guard of the revolutionary army, consisting of 4,000 men, under Generals Mendoza, Batalia, and Riera, were met Sept. 11 by 4,100 troops under Gen. Garrido, who had succeeded Gen. Guerra as Minister of War. When the insurgents had taken Angeles and other interior towns the Government authorities took forcible possession of two steamboats of the American company to serve as transports. When 1,100 rebels advanced to take Cumana the garrison of 350 men retired. The revolutionists collected the customs at Bolivar, Cumana, Cuno, Colorado, Guaira, Coro, and Barcelon. They received a large shipment of munitions and ammunition and some field-guns from Germany. They cut the English railroad near La Guayra. Wherever the revolutionists held a seaport President Castro declared it closed. His gunboats were useless for maintaining a blockade of even one port, and therefore the British and German governments refused to recognize any blockade, and they permitted the vessels trading with the ports and in the Orinoco river. The rebels at Barcelona attempted to force a loan from the American consul, who is a Venezuelan citizen, but the State, when the orders of the naval authorities interfered for his protection. Telegraph communications in the interior were broken by them since early in the rebellion. The Government arrested the employees of the French Cable Company at Carupano and cut the cable. President Castro issued a proclamation denouncing Gen. Matos as a traitor who offered to hand over the financial administration of the country to foreign capitalists and ordering him to be tried as a private. While Gen. Matos advanced to Camataqua, in the state of Miranda, 50 miles south of Caracas, intending to form a junction with the army of Gen. Luciano Mendoza, who had till now avoided a pitched battle and succeeded in harassing and wearing out Castro's troops, Gen. Matos had ordered at Tocuyito to move with the main body of his troops. Gen. Castro, who was at Ocumare, concentrated his troops, withdrawing those that were posted to stop Matos, and with a force of less than 5,000 he marched with astonishing celerity to Valencia. Gen. Mendozza thereupon retired toward Villa de Cura. Valencia was saved from falling into the hands of the insurgents, but the stratagem only delayed matters. Gen. Matos, finding the way clear, marched through Ocumare and San Sebastian, hoping to effect a junction with Mendoza near Villa de Cura. Gen. Castro earlier succeeded in joining forces with Gen. Garrido and had an army as strong as that of the veteran Gen. Luciano Mendoza, whom he feared more than Gen. Matos. Gen. Mendoza attacked Castro at La Victoria, and there was a day's fighting that lasted a week. Gen. Gomez arrived with reinforcements for Castro on the second day. The wounded perished without care under the tropical sun. The rebels numbered about 8,000, Castro's not quite so many. After many hundreds had been killed on both sides Gen. Men- doza on Oct. 17 abandoned his positions and retreated. His men were disheartened, with a ride in his hands, repeatedly led the assault, to inspire his men with his own courage and energy. The rebels received reinforcement on the fourth day and completely routed the Government forces, which would have fallen if the Government forces had not received fresh ammunition by railroad. The rebel losses were reported to be 1,000 in killed and wounded, and those on the Government side 1,400. The rebels attacked Carupano and retreated after a hard fight. President Castro still remained at La Victoria with 5,000 men. The revolutionists returned and renewed the attack. When Vice-President Gomez withdrew all the troops from Caracas, the seat of government was transferred to a provisional capital in the Guacara-puro district. It is the custom of Venezuelans in their civil wars to spare their beautiful capital. The revolutionists had about 10,000 troops cantoned at San Sebastian, San Juan de los Moros, Cua, Ocumara, and Villa de Cura, forming a ring of stations around Caracas. Desertsions had greatly reduced Gen. Castro's forces, but he still had a formidable and trustworthy force in his 5,000 Andine troops. The revolutionists succeeded in cutting communications between La Victoria and Caracas and destroying the railroad. They attempted to take Los Teques, but were defeated. His gunboats were placed on the defensive. Gen. Castro, having learned that they were short of ammunition, began to press them, and drove them from several positions. Troops posted in front of La Victoria were routed and pursued toward Guaroque. The bodies commanded by Gen. Riera and Gen. Mendoza dissolved on the approach of the Government troops. The whole organized rebel army broke up into guerrilla bands that disappeared on the appearance of the Government troops. Gen. Matos fled to Curaçao. Gen. Roldan kept 900 men together, with whom he fell back on Lezama. The minister returned to Caracas. President Castro's troops reoccupied Coro and Cumana. Ciudad Bolivar was still held by Gen. Ferrer and Barcelona by Gen. Pablo Guzman. An armistice was declared after Barcelona had been recaptured.

**French Claims.**—Before the Matos expedition was fitted out the French claim of indemnities for maltreatment and property losses of French citizens during the revolution of 1892 were brought once more to the attention of President Castro's Government at Tocuyito, and it was suggested that France resume diplomatic relations with France and settle the claims that had caused a rupture in March, 1895, fearing that France would impose duties on American produce. The Government of France was informed that treaties relating to the resumption of normal diplomatic intercourse, a treaty of commerce and navigation with the favored-nation clause was negotiated, and an agreement was made referring the claims of French citizens to the arbitration of Señor Leon y Castillo, Spanish ambassador at Paris, acting with one representative of each of the two countries. The protocol was ratified on April 18. Claims to the amount of 2,000,000 francs antedating the last revolution were excluded from the arbitration. The claims to be determined and settled amounted to 54,000,000 francs, including 18,000,000 francs for the railroad running from Maracaibo, which was practically destroyed. It was proposed to assign the receipts of one of two custom-houses to the payment of these debts.

**German Claims.**—When the Venezuelan Government showed a willingness to settle the French claims, Germany, which had come to an agreement that the preliminary preparations were in progress, became urgent in demanding the satisfaction of the claims of German citizens. There were claims for
indemnification of losses incurred during the civil wars, amounting to 1,500,000 marks. These claims, analogous to the French, the President appointed a commission to examine, and also similar claims of Americans, Frenchmen, and Italians. There were 359 claims for goods supplied by German merchants. Lastly, there was the defaulted interest on the loan of 50,000,000 francs, two-thirds of it held by a German banking institution, while the remaining third was divided about equally between French and British capitalists. The loan could not be placed on the market because in 1897 Venezuela failed to meet her obligations. The interest and sinking-fund in arrears amounted to over 9,000,000 francs. Germany and the other countries interested declined to recognize the jurisdiction of President Castro's commission. The German Government recognized as valid about 40 claims for losses in the revolution of 1898, amounting to 1,700,000 francs. The damage arose from the failure of the Venezuelan Government to pay for goods supplied to the troops, from requisitions made in war time, from looting, and from forced loans. On Jan. 24, 1901, the Venezuelan Government offered the claims to the commission, to which it agreed, which is the appeal that could be taken to the Venezuelan Supreme Court. This commission rejected some of the claims and reduced others. Damages suffered to vessels and materials were not recognized. In August 1899, in his message to Congress, President Castro demanded that the rest were settled or on the way to a settlement, but when the Ban Righ committed her injurious acts and the authorities of Trinidad showed open partiality to Venezuela, the consideration of the attitude of the British authorities in connection with that vessel. These remonstrances were contained in notes presented on Feb. 28, March 8, March 13, and April 3. The British note complained of conduct of the Venezuelan consul in Trinidad, and this the Venezuelan minister said should be considered in connection with the partiality of the colonial authorities. On Nov. 11 the Venezuelan Government was informed that if it persisted in its refusal to discuss the complaints the British Government would be obliged to decide what steps should be taken for the protection of British interests. The Venezuelan reply, dated Nov. 18, expressed regret that the complaints with regard to the Ban Righ had not been examined and called attention to the eagerness of the British Government to discuss matters that were of secondary importance when, the British interest felt by Venezuela in obtaining recognition and respect for claims arising from the grave injuries caused by the Ban Righ and the facilities afforded to the revolutionaries by the colonial authorities in Trinidad, which claims have been met by a most unfair refusal of the British Government to consider the matter. The British flag was raised in September over the island of Patos, which is about a mile long and a third of a mile broad and is uninhabited, but has been a resort for smugglers and fishermen. The Venezuelan Government protested against this, reiterating its claim by sovereignty over the island. On Dec. 2 the British minister at Caracas presented a peremptory demand for the satisfaction of British claims. The Venezuelan acting Minister of Foreign Affairs, Dr. Lopes Baralt, in his reply again complained that reparation was not made for the injury inflicted by the Ban Righ and stated that, the Venezuelan Government considered it impossible for the moment to meet its debts, but as soon as peace was reestablished in the country it would not be nec-
necessary to remind the Venezuelan Government of its obligations.

Crisis with German Blockade.—On July 23 Lord Lansdowne, British Minister of Foreign Affairs, suggested to the German ambassador at London joint action of the two governments to obtain satisfaction for their respective claims against Venezuela. The German Government proposed a joint naval demonstration. A blockade of La Guayra, Puerto Cabello, and Maracaibo was suggested by the naval authorities, or, as an alternative, the seizure of all the gunboats of Venezuela, until the demands were complied with. Lord Lansdowne preferred the latter plan, as a blockade was open to objections. On Nov. 11 Germany agreed to join Great Britain in addressing an ultimatum to Venezuela and acceded to the plan of seizing the gunboats as the first step. Before embarking, however, in a project of joint coercion the German Government desired to have it understood that the British and German claims should stand or fall together, that neither claim could be settled without an equally satisfactory settlement of the other, and that neither Government should be at liberty to recede except by mutual agreement. The British minister accordingly announced that he should support the other’s demands, and should not desist from doing so except by agreement. The British Government divided its claims into three classes, placing in the first rank cases of unjustifiable interference with the liberty and property of British subjects and with British vessels, next injury to property in the revolutions, and last claims against Venezuela. It was not desired, however, to distinguish them in making the demands upon Venezuela, but to obtain a general settlement, as it was believed that to advance any one class of claims or to specify any particular amount would diminish the chance of obtaining reparation in all cases. If the Venezuelan Government returned an unsatisfactory answer or none at all to its last note the British Government was ready to proceed to coercive measures. If the seizure of the gunboats failed to produce the desired effect, England and Germany could, therefore, with certainty be the next step. On Nov. 28 President Castro, in conformity with an act of Congress, appointed a new commission to examine all claims of foreigners, but none were presented. The British minister then demanded that each sent 8 vessels of war to the coast of Venezuela. On Dec. 7 the German chargé d'affaires von Pilgrim-Baltazzi and the British minister arrived off Bridgetown, and both vessels of war arrived. If a satisfactory reply were not immediately forthcoming the German Government threatened to take measures for the satisfaction of German claims. The English note demanding the immediate satisfaction of British claims was of similar tenor. The German note declared Venezuela’s reply of May 9 relative to claims arising out of the civil wars of 1898 and 1900 to be unsatisfactory, the Venezuelan argument that internal legislation excludes diplomatic intervention to arrange the claims of foreigners being contrary to international law. The treaty with Colombia to which the Venezuelan Government appealed is valid only between Germany and Colombia, and moreover does not exclude diplomacy, and Venezuela herself had made diplomatic agreements with France, Germany, and Spain relative to the payment of claims arising out of revolutions. The decree of Jan. 24, 1901, declaring the national debt as ap prepensible to any public collection, and the recognition of the claims of the two former powers, was a voluntary step. If a satisfactory settlement were not arrived at the claims, the British and German Governments would send 8 gunboats to the port of La Guayra. On Dec. 9 the German war-ship Panther entered the harbor of La Guayra and, in accordance with the request from the fleet went alongside of the four vessels of the Venezuelan navy that were there and de-
manded their surrender. The Venezuelan officers and crews left the vessels, which were then towed outside. The Gen. Crespo, the Totumo, and the Magdalena, of the Court and there all night. The reason given was, they were not sufficiently seaworthy to undertake the voyage to Trinidad alone, while to tow them thither would impede the freedom of passage of the neutral vessels. The German ships Falke and Panther then steamed away to Carupano to seize the Venezuelan vessel that was blockading the mouth of the Orinoco. This blockade the British and German fleet after officially pronouncing it null, before coercive steps were taken in the matter of the claims, by sending war-vessels up the Orinoco river, against which action President Castro formally protested. The representatives of France and Italy joined in the declaration that the blockade was ineffective, but the United States minister declined to identify himself with them in its notice. The President replied to the seizure of the fleet by arresting all the British and German resi- dents in Caracas, and such was the spasm of resentments for the aggressive acts of the two powers that their citizens were for the moment safer in prison than in their homes against the mob which damaged the German legation building and shouting anti-German and anti-British slogans. The Official Gazette ordered the imprisonment of all Britons and Germans in the country, but on the urgent remonstrance of Mr. Bowen he released them on the following day and the next day the British and German vessels returned to their ports. The Ossun, a French steamer that had been chartered by the Venezuelan Government, was the only vessel found at La Guayra that was not sunk by the allies. The Venezuelan flag-ship Bolivar was seized at Port of Spain. On Dec. 10 the troop-ship Zamora was taken, and on Dec. 12 the gunboat Restaurador, formerly the American yacht Atlanta, was seized at Guanta. The ship Topaze at Puerto Cabello was compelled by a mob to lower the British flag. The commander of the British cruiser Charybdis demanded reparations. Before receiving a reply he shelled the forts, which responded feebly. When the guns were silenced a landing party destroyed with dynamite and fire the Libertador Castle and man-slaughtered the crew. The Venezuelans warned all the allies against bombarding the town. The officials of the English harbor corporation at La Guayra were threatened with violence by a mob and also with violence by a body of British marines who lashed the Venezuelan ships and rescued two of them. The British Legation had examined the claims of Italians for compensation and pronounced claims amounting to $300,000 francs to be valid. The Italian colony in Venezuela numbers 7,000 persons. The Venezue- lan Government did not anticipate coercive action from Italy because, in the treaty concluded with that country on June 19, 1861, it is stipu- lated that in case of claims for damages arising out of revolutionary acts Italians shall receive the same treatment as that accorded to Venezue- lans. President Castro, in appealing for the diplomatic intervention of the United States, com- plained that the powers had acted before they had resorted to the Venezuelan courts for a deci- sion on their monetary claims, which were insig- nificant in amount and entirely disproportionate to the efforts made to collect them by force, and because they had proceeded to hasty and violent measures to force the resources of foreign nations were exhausted. Germans who had laid claims before the Venezuelan tribunals have in many cases ob- tained awards. The Venezuelan Government con- tested the right of the German Government under the Naval Reciprocity Law that when the courts of a coun- try are open to claims for damages against the Government, diplomacy shall not be resorted to until the claims have been presented to the courts and final judgment thereon, in case of justice or unusual delay or a violation of inter- national law. This doctrine was accepted by the delegates to the Pan-American Congress at Mex- ico. Another principle of international law that Germany and Great Britain set at naught forbid armed intervention for the collection of public debts or guaranteed interest.

Italy determined to join in the naval hostilities, and sent the cruiser Giovanni Bausan. The Italian minister to Venezuela on Dec. 13 forwarded an ultimatum analogous to those presented by Great Britain and Germany. Italy first proposed to Great Britain and Great Britain to be associated with them in the measures they were about to take, and in any arrangements that might be made, as the claims of Italians were of the same nature as those pressed on behalf of Germans and British. This proposal was favorably received. Commodore Scheder selected La Guayra as the center of the movements of the German ships. Each commander took a different part of the coast and neither was responsible for the acts of the other except when they acted in concert. The German fleet was taken over by Great Britain under the command of Vice-Admiral Douglas was much the stronger, having a tonnage of 25,000 tons and 1,700 available men in the crews. The Italian naval force arrived on Dec. 16. The United States sent to Trinidad two squadrons to observe developments and to be ready to defend American interests or protect American lives and property, consisting of the Kearsarge, Alabama, Massachusetts, Iowa, and Scorpion, under Rear-Admiral Higginson, and the Chicago, Newark, and Eagle, commanded by Rear-Admiral Sumner. After a few days most of the vessels returned to their station in Porto Rico. A wave of patriotic enthusiasm swept over Venez- uela. All citizens fit for military duty enrolled themselves in the militia, even those belonging to the revolutionary party. The people everywhere pledged themselves to buy no British or German goods while the differences remained unsettled and foreign ministers were received with great respect. When the news of the bombardment of Puerto Cabello reached the capital 10,000 men surrounded the Government building claming for arms to repel the invaders. British vessels were sent to support the enrolment in the militia of men between the ages of eighteen and forty-five, and Gen. Ferrer formed an entrenched camp between La Guayra and Caracas, which was occupied by 3,000 troops under the Minister of War and Gen. Modesto Castro. President Castro issued a proclamation granting amnesty to all political offenders and restoring confiscated estates. The Venezuelan consul at Port of Spain in Trinidad closed his office and departed. The German cruiser Panther attempted to enter the harbor of Maracaibo to take out the only war-ship not yet seized, which was moored along the wharf. Gen. Bello, the commandant at the old Spanish castle of San Carlos, fired a warning shot. The German vessel did not go in and take the Venezuelan vessel until the Vineta, Falke, and Panther of the German squadron shelled the fort. The old guns of the Venezuelans responded and did some damage to the nearest German vessel. The vessels deserted, but returned two days later and demolished the fort. The village of San Carlos was destroyed and some of the inhabitants were killed.

On Dec. 12 President C utens proposed to send the German minister to the Venezuelan minister for negotiations.
A blockade of the coast of Venezuela was declared on Dec. 20. The Germans blockaded the port of La Guayra, the Colombian frontier, and the British the strip of coast eastward to the frontier of Demerara. The American merchant steamer Caracas, which had started on a voyage to La Guayra, was permitted to enter the port, but before half the cargo was discharged the German naval authorities on Dec. 23 compelled her to leave. On the same day the British, German, and Italian Cabinets, to which the Venezuelan proposal to arbitrate had been transmitted from Washington with an offer of the good offices of the United States, accepted arbitration in principle. The powers consented to arbitration of their claims by The Hague tribunal, subject to certain conditions which it was first necessary to discuss. When the proposal was first made through Minister Bowen the British and German governments at the suggestion of Germany offered to submit the whole dispute to the arbitration of the President of the United States. President Roosevelt was urged by them to undertake the task, but on Dec. 27 he definitely declined and suggested the International Court of Arbitration at The Hague as the proper tribunal. The German minister at The Hague, Signor Mayor des Planches, the Italian ambassador, Baron Speck von Sternburg, soon arrived to take charge of the German negotiations. The claimants were demanded to amount to 31,600,000 francs. The German claims were 8,750,000 francs, the English 22,500,000 francs. The blockading fleets landed men and seized the custom-houses at Carupano, Cumaná, Guanta, La Guayra, and Puerto Cabello. A large number of merchant vessels belonging to Venezuelans and of cargoes destined for Venezuela were seized by the blockading squadrons, and the captured ships were moored at Margarita island. Italy sent a second ship and undertook the blockade of the coast of Tuscaras and Coro. Mr. Bowes, the British minister at Washington, suggested that the details connected with the claims be settled directly by him as the plenipotentiary of the Venezuelan government, an offer he was accepted. By the exchange of a note, the British, German, and Italian representatives at Washington. This proposal was promptly accepted by the three powers. The exchanges of note of the allied governments were cash payments of their claims of the first line and adequate guarantees for the settlement of the others. Mr. Bowen proposed that all countries have claims against Venezuela should have in the proceeds of the customs duties, which have been the chief source of revenue for the Venezuelan Government, and hence were the only satisfactory guarantee Venezuela could offer. President Castro offered to pledge a sufficient proportion of the customs receipts on condition that all the foreign claims should be settled for $340,000 and $360,000 respectively. England and Italy finally agreed to accept a cash payment of $5,500 each. The German Cabinet insisted on $340,000 and $360,000 respectively. England and Italy still hold out for a percentage of the customs revenue to be reserved for the satisfaction of their claims. The British government, according to the original estimates, was to pay $340,000 and $360,000 respectively. The protocols provide that the blockade shall be lifted immediately. Venezuela shall pay out 30 per cent. of the customs duties of the two ports for the allied governments, which money shall accumulate till the court of The Hague decides the question of preferential treatment and until all claims have been adjudicated, when pro rate payments shall begin and continue monthly. If Venezuela defaults in the payment of one instalment Belgium shall administer the customs at the two ports until all claims as adjusted by mixed tribunals shall be satisfied. Renewal of the Rebellion.—The blockade, which cut off President Castro’s revenue and prevented his getting supplies of ammunition, was the opportunity of the revolutionists, who still maintained a small army in the field under Gen. Rolando and held the Tuy valley. Gen. Matos despatched a new expedition from Curacão to the Gaojira peninsula. Gen. Manuel Antonio Mattos had already expended $2,000,000 in arming, feeding, and paying the army of 10,000 men that took the field in the summer. He had distinguished himself favorably in the government of financial crises as Minister of Finance under President Crespo and President Andrade, and he
denounced the Castro administration as corrupt. President Castro's Government confiscated his large estates and castigates him in the Bank of Venezuela and the Bank of Caracas. After the blockade food rose to high prices and the Government and national bank soon expended all the money that was left and had no means of raising more. For the first time since 1892 the soldiers could neither be paid nor properly fed. Gen. Rolando gathered 1,200 revolutionists at Lezama. Gen. Riera an equal number at Coro, and other bands assembled in the neighborhood of Barquisimeto. Gen. Antonio Fernandez, in command of the revolutionary forces, inflicted a severe defeat at Guatire on the Government troops commanded by Gen. Modesta. President Castro sent with 1,500 Andine troops to check the rebel advance if possible. The coasts of Tucacas and Coro, held by the revolutionists, were not blockaded by the allies, and they were able to import arms and ammunition and other supplies freely after Castro's navy was captured. Some of the generals who had fought for the revolution in the former campaign were recalled by receiving commands in the Venezuelan army.

WASHINGTON. (See under United States.)

WEST AFRICA. The coast of Africa from the southern border of Morocco to the mouth of the Congo has in recent times been occupied by European powers which formerly neglected the defense of their few scattered trading stations. The effective occupation of the coast regions was followed by treaties with the banks of the Shari to establish claims over the interior. At last the whole of the interior of northern Africa between Barbary and the Congo region from the west coast to the western limits of the Egyptian Sudan has been partitioned into spheres of influence. Germany occupied Togoland and Cameroons in 1884 and in the same year France declared a protectorate over the coast between Cameroons and the Congo, having had factories on the Gabun for forty years, and a British protectorate was proclaimed over the region where the Royal Niger Company claimed to have made political treaties with several hundred native chiefs and tribes. The Germans and the French, as well as the English, were active in explorations and scientific missions which had for their object the establishment of treaty relations with the natives of the interior. This era of private expeditions, supported by associations of the advocates of colonial enterprise, was succeeded by one of military operations to make good uncertain claims of protectorates based on treaties with native potentates, and by diplomatic negotiations in the definition of spheres of influence after a number of international incidents which created ill feeling between the nations that were actively engaged in extending their dominions in that part of Africa. The German Hinterland could no longer be applied when the expeditions of rival powers clashed in the far interior of West Africa in the bend of the Niger, on the upper Binue, and in the region of Lake Chad. The French, advancing from Senegal eastward and from the Ivory Coast and Slave Coast northward, later northward from the Congo and southward from Sierra Leone and Senegambia; the Germans, pushing up from Cameroons, endeavoring to establish a foothold on the Binue and Lake Chad, and striving at the same time to establish their influence in the bend of the Niger by occupying the Hinterland of Togoland—all converged toward the same regions, and in the race for the Niger region and the Central Soudan the powers were busily extending their influence, and when military expeditions met in the interior hostile collisions were not always avoided, though they were gazed over by expedient diplomatic explanations. France and Germany first came to an understanding and signed a convention in December, 1885, by which Germany conceded to France the regions inland from the Cameroons east of 15° of east longitude, reserving the southwest coast wested by north latitude down to Lake Chad. In the same year Germany made an agreement with Great Britain and a supplementary one in 1886, abandoning pretensions on the Binue and securing access to Lake Chad and the recognition of rights over Admawa. France arranged a delimitation with the Congo State, in a convention concluded in 1885, supplemented by further arrangements in 1887. The boundary of Portuguese Guinea was settled by a convention concluded by France on May 12, 1886. Germany retired from the contest for the Niger region and the states of the Soudan, being content with a commercial route to Lake Chad. The Anglo-German agreement of August, 1886, defined as the limit between the British and German spheres a line from the Cross river to the Binue east of Yola, fixed by a further agreement on Nov. 15, 1893, at a point 30 miles east of that town. The struggle for the bend of the Niger and the race for Lake Chad was succeeded by an agreement between France and Great Britain. On Aug. 5, 1890, an Anglo-French agreement was reached. This agreement defined the limit between the British and the French spheres of influence on the Niger from Say on the Niger to Barua on Lake Chad drawn in such a manner as to comprise within the sphere of the British Niger Company all that belongs to the Kingdom of Senegal except the Fouta Jallon, and gives to each power access to Lake Chad, but did not decide the fate of the Mohammedan states surrounding that body of water, which then possessed more formidable powers of defense than they had after the conqueror Rabah had overrun these countries; neither did the convention settle the boundaries in the bend of the Niger west of Say, where French and British were busily extending their influence, and the French put a considerable military force into the field to contend with Ahmadu, Samory, and other powerful natives rulers who blocked their progress. In 1889, 1893, and 1895 conventions were signed by France and Great Britain delimiting certain parts of their contiguous possessions in accordance with the advance of effective occupation. The French had not only Senegal as a base but the Ivory Coast, which they occupied in 1893, having had factories on that coast for the forty years. In 1894 the British had signed a treaty and aimed to join this territory, the Ivory Coast, and the Senegal protectorate together, leaving
the British Gold Coast, Sierra Leone, and Gambia
isolated enclaves. To check this plan the British
subsequently occupied the Gold Coast in 1896 and
the Royal Niger Company began to
organize an army. Germany, in February, 1896,
recognized the French claim to Bagirmi and defi-
nitely accepted the Shari as the limit of the Ger-
man sphere in the region of Lake Chad. Political
and military undertakings having exhausted the
resources of the Niger Company and the situa-
tion becoming critical on the frontiers, the Brit-
ish Government bought out the chartered com-
pany, and on June 14, 1898, concluded a more
definite and complete agreement with France,
which after long negotiations over details was
ratified on June 15, 1899. The spheres of France
and Great Britain, both east and west of the
Niger, are delimited in this convention. Be-
 tween the British Gold Coast protectorate and
the French Ivory Coast the line is continued from
the terminal point of the frontier laid down in
the convention of July 21, 1893, which was at
the point on the river Volta where it is inter-
sected by the parallel of 9° of north latitude.
It ascends this river northward to its intersection
by the parallel of 11° of north latitude, then
turns on its left to the confluence of the
Volta and the Shari. The Soudan then continues northward, following the Dalll
Mauri, to a point 100 miles from the city of Bo-
koto, from which it follows the arc of a circle
with that radius eastward round that city on the
north until its second intersection with the paral-
el of 14° of north latitude, whence it runs due
east 70 miles, then south to 15° 20' of north lati-
date, then east again 230 miles, then north to 14°
of north latitude, then east to the meridian that
passes 35° east of the town of Kuka on Lake
Chad, and then follows this meridian to the shari
during the lake, and finally to a point on the
inland line 5 miles below the confluence of the
Faro in a straight line to the intersection of the
parallel of 10° of north latitude with the meridian of
13° of east longitude, and thence to a point
on Lake Chad east of the town of Kuka. The
boundary between German Togoland and Da-
homey, by the agreement of July 23, 1897, be-
tween France and Germany, is the river Mono up
to 7° of north latitude and on the north the paral-
el of 11° of north latitude and the White
Volta as far as 10° of north latitude. In the
Anglo-German negotiations the Salaga country
behind Togoland and the Gold Coast was left
undivided for a long time and was treated as a
neutral zone until an agreement was reached on
November 14, 1900. The boundary of the Dio-
viling line up to 9° of north latitude, the line to
be drawn beyond that point by a mixed com-
mission in such manner as to leave Yendi and
Chakosi on the German and Maupuru and Gam-
baga on the English side. Thus a formal agree-
ment between France and Spain was rati-
fied reducing the area that Spain claimed south
of Morocco, leaving the entire Sahara in the
French sphere, from the western frontier of
Egypt to the Spanish coast strip at Rio de Oro.
In compensation France conceded the Spanish
claim to the coast district on the Bight of Biafra
from the boundary of the German Cameroons to
the Rio Muni, with a boundary inland at 11° 20'
west of Greenwich. In the same agreement France ensured the right of preemption to all
the Spanish territories in West Africa and the
islands adjacent to the coast.
French Possessions.—Including the Sahara,
with an estimated area of 1,544,000 square miles,
the French possessions, stretching from the
Congo and Ubangi to the borders of Algeria,
Tunis, and Tripoli and from the Atlantic to the
Egyptian frontier, have a total area estimated
at 3,060,000 square miles, and an estimated pop-
ulation of 23,380,000. The administration of
French West Africa was reorganized on Jan. 1,
1896. The boundaries of Senegal, the Ivory Coast,
Guinea, French Soudan, Dahomey, and the
Soudan was placed under a military admin-
istration independent of the civil administra-
tion of Senegal, but under the political direc-
tion of the Governor-General of Senegal, who is Gov-
er-General of French West Africa. The colony of
Senegal, where a French settlement has
existed since 1637, now extends inland 900 miles
to within the line of 7° 30' west of Greenwich.
The direct administration of the Governor are the
communes of St. Louis, Dakar, Goree, and Ruf-
isque, which have a total population of 42,000.
Local administrators are placed over 9 circles
which have a population of 61,000. The territory
under immediate French protection and control
has an area of about 1,000,000 square miles, but
the total area of the colony and protectorate is
200,000 square miles, with 3,200,000 inhabitants,
including the new circles of Kayes, Kita, Se-
tadugu, Bamnuko, Segu, Jenne, Nioro, Gumba,
Sokolo, and Bussola. The large effort to obtain
access through their own territory to the mari-
time Niger was frustrated, but the British Gov-
ernment agreed to lease for thirty years to French
Government a piece of land on the right bank of the Niger, between Leala-
aba and the confluence of the Moussa and Niger, and
one on one of the mouths of the Niger and to ex-
clude the territory as regards river navigation and tariff and fiscal
matters to French as to British persons and mer-
chandise. The line between British Nigeria and
German Cameroons is continued from a point on the
Binche 5 miles below the confluence of
the Faro in a straight line to the intersection of the
parallel of 10° of north latitude with the meridian of
13° of east longitude, and thence to a point
on Lake Chad east of the town of Kuka. The
boundary between German Togoland and Da-
homey, by the agreement of July 23, 1897, be-
tween France and Germany, is the river Mono up
up to 7° of north latitude and on the north the paral-
el of 11° of north latitude and the White
Volta as far as 10° of north latitude. In the
Anglo-German negotiations the Salaga country
behind Togoland and the Gold Coast was left

west of Greenwich. In the same agreement France ensured the right of preemption to all
the Spanish territories in West Africa and the
islands adjacent to the coast.
Ciudad Bolivar, and 328,939 kilograms from Maracaibo. There were 1,253,342 kilograms of rubber exported from Ciudad Bolivar, and 43,211 kilograms of tobacco; 18,774 head of cattle from Puerto Cabello and 6,400 from Ciudad Bolivar; 35,189 kilograms of goat- and deer-skins from Ciudad Bolivar, 836,129 kilograms from Maracaibo, and 125,886 kilograms from Maracaibo; 53,982 kilograms of copra from Puerto Cabello; 6,421,530 kilograms of rice; 1,781,612 kilograms of dividivi; 4,099 kilograms of cinchona bark, 30,587 kilograms of copalba, 42,901 kilograms of fish sounds, and 274,533 kilograms of sugar from Maracaibo; and 1,316 kilograms of gold bullion, valued at $380,000, from Ciudad Bolivar. Feathers for millinery are an important article of export. The principal imports are provisions, textiles, hardware, coal, petroleum, timber, and machinery. Coffee is exported to the United States, France, and Germany; cacao to France, Spain, and Germany; hides to the United States; rubber and feathers to Great Britain.

Navigation.—Maracaibo was visited in 1900 by 403 vessels in the foreign trade, Puerto Cabello by 282, La Guayra by 205, Ciudad Bolivar by 267. The merchant marine in 1900 consisted of 18 sailing vessels, 2,836 tons, and 12 steamers, of 2,267 tons.

Cables and Telegraphs.—There are 529 miles of railroads. A new line to connect Yaritagua with Puerto Cabello was contracted for in 1899. The telegraphs have a length of 3,882 miles.

Insurrection.—The revolution that was started in the beginning of 1902 for the overthrow of President Castro was headed by M. Matos, the wealthiest of Venezuelans, who purchased the British steamer Ban Righ, loaded her in Europe with rapid-fire guns for her own armament and field-guns, many thousand rifles, and a vast quantity of ammunition for the army. A large force embarked at Trinidad; the steamer was converted into a warship bristling with guns, her name changed to the Bolivar, and after she had sunk the only serviceable vessel of the Venezuelan navy that Castro sent to capture her, Matos could land his expeditions at any part of the Venezuelan coast that he desired and bring all the supplies he could ever need. Castro had enemies in various parts of the country ready to join in the insurrection. The forces of Matos consisted of 15,000 men, divided into 25 sections. The majority of the leaders of the Government was weak or unpopular, and threatened to advance on Caracas from the Cumana district and from the Colombian border. Revolutionists rose in bands in many places. When the expedition arrived on Jan. 2 and landed 6,000 Mauers the Government force of 500 men at Coro joined the rebel General Urbina, Fernandez, and Garcia. Generals Guzman, Monogros, and Platero, of the revolutionary army, had their way in Carabobo and Guiraico. Generals Batalla and Fernandez Cenko rose against the Government, and the latter twice defeated the Government troops in Carabobo. Gen. Vasquez headed a successful rising at Carupano. The Government troops had difficulty in putting down an insurrection in Maracaibo. The rebels were victorious near Barquisimeto. A severe engagement was fought without result near Uchire. Contributions were levied on foreigners by the insurgents, and the port of Caracas was captured.

The Venezuelan Congress elected Gen. Castro as President for another term of six years to begin on Feb. 20. An invasion from Colombia under Rangel Girardis was checked near Lafrías. President Castro sent troops to meet the revolutionists who laid siege to Barcelona, Carupano, and Cumana and held the port of Tucacas. The revolutionists, who numbered 3,500 men, defeated Gen. Escalante on April 3 near Carupano, where he lost 350 men. On the following day he was attacked and routed near El Pilar. The rebels took Barquisimeto. Gen. Ramon Castillo with 2,200 men marched out against them. He was attacked on April 22 near San Antonio, and fatally wounded in the beginning of the engagement, upon which the newly levied troops of his force deserted to the enemy and the others retreated. The Government forced every able-bodied man into the army. Gen. Vincenzo Gomez led a third army against the rebels at Carupano, which was attacked on May 6 by sea and by land. He also was wounded and his troops were routed on May 6, losing 115 dead and 310 wounded. The Government gunboats shelled the town without the usual notice in spite of the protests of the foreign residents. A new invasion was aided by the Colombians, and 4,000 men crossed the border. The revolutionists compelled a Norwegian steamer to carry troops and munitions from Barancas to Bolivar, and afterward the vessel was attacked and Capt. Melander killed by Government troops. La Guayra was attacked by a band of revolutionists on June 7, and the Government forces shelled them from the forts and the warship Miranda, compelling them to retire. Gen. Matos had his army in the field by this time, fully organized and equipped, and he began a systematic advance on Caracas. In June he issued a proclamation in which he announced a provisional Government, with himself as President, Pedro Ezequiel Rojas as Minister of Foreign Affairs, and Generals Perez and Pedro Ducahne as commanders of the armies in the field. The 30 per cent. duty was declared abolished with regard to West Indian imports. He moved with 3,000 men to Urica, leaving 3,000 still in the State of Bermudes. Coro was held by Vice-President Ayala with a strong force, but on June 20 he capitulated. Insurgents fought the Government troops in the streets of Baranaca early in August, in the face of the President, Gen. Bravo and 60 men. On both sides 8 generals, 23 colonels, and 167 men were killed and many houses were destroyed. Germans, Italians, Britons who were at La Guayra and Puerto Cabello, where the revolutionists were active. The commanders were ordered to send vessels to Barcelona, where the insurgents were sacking the stores of foreign merchants and did not spare the foreign consulates. Ciudad Bolivar was blockaded by Government vessels. Germany, Great Britain, and France protested against the blockade on the ground that it was ineffective. By the middle of August the revolutionary party obtained possession of Puerto Cabello. The Government forces after a bombardment took Carupano and Ciudad Bolivar was next bombarded. The Restaurador advanced into close range before firing, flying the American flag. For this Minister Bowen demanded and received an apology from the Venezuelan Government. On Aug. 22, about 700 rebels entered Carupano and fought all day with 1,000 Government troops under Gen. Velutini. On Aug. 28 the advance guard placed an attempt to take Tagua, but was repelled with a loss of 200 men. The rebellion made progress, however. The German railroad was cut, and 600
soldiers who attempted to reestablish traffic were driven away near Los Teques, which the rebels captured. On Aug. 29 they were joined near there by 1400 rebel soldiers under Gen. Matos long made his headquarters at Barcelona. Insurgents rose in the vicinity of Caracas and had a fight on Sept. 5 with the Government troops. The advanced guard of the revolutionary army, consisting of 4,000 men, under Generals Mendoza, Batalia, and Riera, were met Sept. 11 by 4,100 troops under Gen. Garrido, who had succeeded Gen. Guerra as Minister of War. When the insurgents had taken Angostura and other interior towns the Government authorities took forcible possession of two steamboats of the American company to serve as transports. When 1,100 rebels advanced to Cumana the garrison of 350 men retired. The revolutionists collected the customs at Bolivar, Cumana, Cano, Colorado, Guiria, Coro, and Barcelona. They received a large shipment of Mausers and ammunition and some field-guns from Germany. They cut the English railroad near La Guayra. Wherever the revolutionists held a seaport President Castro declared it closed and proclaimed a blockade. His gunboats were useless for maintaining a blockade of even one port, and the British and German governments refused to recognize any blockade, and their cruisers protected vessels trading with the ports and the Orinoco river. The rebels at Barcelona attempted to force a loan from the American consul, who is a Venezuelan citizen, but desisted when the American naval authorities interfered for his protection. Telegraph communications in the interior were blocked by them since early in the rebellion. The Government arrested the employees of the French Cable Company at Carupano and cut the cable. President Castro issued a proclamation denouncing Gen. Matos as a traitor who offered to hand over the financial administration of the country to foreign capitalists and ordering him to be tried as a private. While Gen. Matos advanced to Camatagua, in the state of Miranda, 50 miles south of Caracas, intending to form a junction with the army of Gen. Luciano Mendoza, who had fled north with about 2000 troops and succeeded in harassing and wearing out Castro's troops, Gen. Mendoza had arrived at Tucuyito with the main body of his troops. Gen. Castro, who was at Ocumare, exclaimed: "Mendoza is withdrawing those that were posted to stop Matos, and with a force of 3,600 men he marched with astonishing celerity to Valencia. Gen. Mendoza thereupon retreated toward Villa de Cura. Valencia was saved from falling into the hands of the insurgents, but the strategem only delayed matters. Gen. Matos, finding the way clear, marched through Ocumare and San Sebastian, hoping to effect a junction with Mendoza near Villa de Cura. Gen. Castro earlier succeeded in joining forces with Gen. Garrido and had an army as strong as that of the veteran Gen. Luciano Mendoza, whom he feared more than Gen. Matos. Gen. Mendoza attacked Castro at La Victoria, and there was savage fighting that lasted a week. Gen. Gomez arrived with reinforcements for Castro on the second day. The wounded perished without care under the tropical sun. The revolutionary army numbered about 8,000 Castro's not more than 4,000. After many hundreds had been killed on both sides Gen. Mendoza on Oct. 17 abandoned his positions and retreated. Gen. Castro himself, with a rifle in his hand, rallied the remaining insurgents, to inspire his men with his own courage and energy. The rebels received reenforcement on the fourth day and completely invested La Victoria, which would have fallen if the Government forces had not received fresh ammunition. Casualty losses were reported to be 1,600 in killed and wounded, and those on the Government side 1,400. The rebels attacked Carupano and retreated after a hard fight. The Government troops still remained at La Victoria with 5,000 men. The revolutionists renewed and renewed the attack. When Vice-President Gomez withdrew all the troops from Caracas, the seat of government was transferred to a provincial capital in the Guacai- puro district. It is the custom of Venezuelans in their civil wars to spare their beautiful capital. The revolutionists had about 10,000 troops cantonned at San Sebastian, San Juan de los Moros, Cua, Ocumara, and Villa de Cura, forming a ring of stations around Caracas. Descensions had greatly reduced Gen. Castro's forces, but he still had a formidable and trustworthy force in his 5,000 Andine troops. The revolutionists succeeded in cutting communications between La Victoria and Caracas and destroying the railroad. They attempted to take Los Teques, but were repelled. Soon after they were placed on the defensive. Gen. Castro, having been reinforced, learned that they and German troops began to press them, and drove them from several of their positions. The rebel troops posted in front of La Victoria were routed and pursued toward Guarico. The troops commanded by Gen. Rieva and Gen. Mendoza dissolved on the approach of the Government troops. The whole organized rebel army broke up into guerrilla bands that disappeared on the appearance of the Government troops. Gen. Matos fled to Curaçao. Gen. Rolando kept 900 men together, with whom he fell back on Lezama. The ministers returned to Caracas. President Castro's troops reoccupied Coro and Cumana. Ciudad Bolivar was still held by Gen. Herrera and Barcelona by Gen. Fabio Guzman. An armistice was declared after Barcelona had been recaptured.

French Claims.—Before the Matos expedition was fitted out the French claim of indemnities for maltreatment and property losses of French citizens during the revolution was brought once more to the attention of President Castro's Government, which was anxious to resume diplomatic relations with France and settle the claims that had existed during 1845, fearing that France would impose duties on cacao by way of reprisal. A protocol was signed relating to the resumption of normal diplomatic intercourse, a treaty of commerce and navigation with the favored-nation clause was negotiated, and an agreement was made referring the claims of French citizens to the arbitration of Señor Leon y Castillo, Spanish ambassador at Paris, acting with one representative of each of the two countries. The protocol was ratified on April 18. Claims to the amount of 2,000,000 francs antedating the last revolution were excluded from the arbitration. The claims to be determined and settled amounted to 54,000,000 francs, including 18,000,000 francs for the railroad running from Maracaibo, which was practically destroyed. It was proposed to assign the receipts of one or two custom-houses to the payment of these debts.

German Claims.—When the Venezuelan Government showed a willingness to settle the French claims, Germany, at the time when the revolutionary preparations were in progress, became very urgent in demanding that the claims of German citizens. There were claims for
square miles and 1,000,000 inhabitants. Porto Novo, the capital, has a population of 50,000. The natives cultivate corn, manioc, and yams and obtain from the forests palm-kernels, cocoonuts, etc. The building of revenue and expenditure in 1894-1896 was £474,206. Abomey, a port having about 15,000 inhabitants, is connected by telegraph with the Niger, and a railroad is being built by a company with Abomey, the capital of the Kingdom of Tonnage. The king was exiled to the French Congo in 1900. The value of imports in 1900 was 15,251,419 francs; exports, 12,755,804 francs. Liquor, cotton goods, and tobacco are the largest imports. The exports of palm-kernels were 6,595,800 francs in value; of palm-oil, 5,352,255 francs. The ports were visited in 1900 by 415 steamers, of 358,404 tons.

British Possessions. The Gold Coast is a Crown colony. The Governor is Major Matthew Nathan. The colony proper has an area of 40,000 square miles, with 1,479,882 inhabitants. The number of Europeans is about 400. There are 11,000 pupils in the missionary schools. The exports are palm-oil, palm-kernels, rubber, and cocoa-nuts. Gold-mines have been opened and a railroad is being built to be worked in Ashanti, which was conquered and made a British protectorate in 1896. The northern territories of Adansi and Ashanti and the part of the neutral zone which the Anglo-German agreement of Nov. 14, 1896, falls to the share of Great Britain, which is to be marked out by a joint boundary commission, are under the direction of a Commissioner, Col. A. H. Morris. The revenue of the colony in 1899 was £322,500; expenditure, £306,600; imports, £1,323,300; exports, £1,117,140; tonnage entered and cleared, 1,250,410 tons. The exports of rubber were £55,731; of palm-oil, £183,204; of kernels, £106,158; of gold dust, £61,300; of cocoa-nuts, £27,020. The northern territories have an area of 50,000 square miles. Many mining concessions have been taken out, and companies have been floated that had no auriferous deposits that can be made profitable. This circumstance and the lack of transportation have militated against the progress of gold-mining. The railroad has been built as far as the Offin river. The inhabitants furnished material for soldiers and many are recruited for the British West African regiments. Fobia is a district that both Germany and Great Britain claim, and both had military to war until the boundary commission came. The western boundary of the Gold Coast was delimited by an Anglo-German Commission in the fall of 1902.

Lagos, another Crown colony, is administered by a Governor, Sir William McGregor. It has an area of 965 square miles and 85,807 inhabitants. The Government maintains 31 schools, with 3,371 pupils. Palm-oil, palm-kernels, ivory, gum copal, cotton, rubber, cacao, and coffee are exported, and spirits, cotton cloth, tobacco, and hardware are imported. A railroad was built from Lagos to Abeokuta, 60 miles, and the extension to Ibadan, 66 miles, is now completed. The Lagos protectorate has an area of 21,000 square miles and a population of about 3,000,000. It includes all the towns belonging to Ibadan and Oyo, Ikirun, and all the Yoruba country. The revenue of the colony in 1899 was £192,790; expenditure, £223,290; imports, £206,600; exports, £115,290. tonnage entered and cleared, 963,828 tons. The exports of palm-oil were £168,458 in value; of palm-kernels, £412,817; of rubber, £160,315. Gambia is governed by an Administrator, Sir George C. Denton. The colony has an area of 69 square miles with 13,456 inhabitants, of whom 62 are Europeans. There are 6 schools, with 883 pupils. The main export is earthnuts. Minor exports are hides, beeswax, cotton, corn, rice, and rubber. Colonial has an area of 2,700 square miles, with about 200,000 inhabitants. The revenue of the colony in 1901 was £43,728; expenditure, £48,518; imports, £46,646; exports, £233,617, including £65,000 worth of indigo and cleared, 284,635 tons. The Gambia protectorate has 90,000. The Jolabs, a wild tribe near the French frontier, murdered two commissioners and some of the police. An expedition was sent to punish them by burning their towns and seizing their grain and cattle. The people of this and other protectorates are rapidly becoming converted to Mohammedanism, even some who had previously embraced Christianity. The spread of Mohammedanism causes a great decline in the spirit trade. The Marabouts, as the native Mohammedans are called, form nearly 75 per cent of the population. Sierra Leone has an area of about 4,000 square miles, with 74,635 inhabitants, of whom 224 are Europeans. Freetown, the capital, in which there is 30,033 inhabitants, is a fortified naval station and the headquarters of the British forces in West Africa, consisting of a West India regiment of 800 men and a West African regiment raised in 1898, besides engineers and artillery. There is also an armistice constabulary of 600 men for frontier defense. The exports are palm-oil, palm-kernels, benni-seed, earthnut-kola, rubber, gum copal, and hides. A railroad from Freetown to Rotofunk, 60 miles, is being carried farther to Bo, 80 miles. The revenue of the colony in 1899 was £168,380; expenditure, £145,090; imports, £289,810; exports, £336,910. The Sierra Leone protectorate has an extent of about 30,000 square miles, with about 357,000 inhabitants. Nigeria is an area of about 40,000 square miles and a population estimated at 25,000,000 to 40,000,000. It comprises Benin, Ilorin, and the coast region formerly called the Olu Rivers protectorate and the regions on the Niger and the Benue that were the field of the commercial operations of the Royal Niger Company. Founded by Sir George Goldie in 1882, and of the political activity of that company were merged this extensive, populous, and productive country to Great Britain. British protectorates over the regions were proclaimed in 1884 and 1887, and in 1889 the Niger Company surrendered its charter and handed over the administration to the Imperial Government. The territories south of a line drawn from Owo on the Lagos frontier through Idya on the Niger to Ashakon on the frontier of the Cameroons, most of which formed the Niger Coast protectorate that was not controlled by the Royal Niger Company, were added to Nigeria, but are still administered separately from the northern protectorate. A part of the lower Niger region was added to Lagos. The revenues collected from imports and exports in Lagos and Southern Nigeria will be divided with Northern Nigeria, which has no present source of revenue. In 1901 the revenue amounted to £280,984, of which £257,472 came from customs. The expenditure was £264,143. The imports were £1,199,690, and of exports £1,166,145. The tonnage entered and cleared was 550,681 tons. Southern Nigeria is thickly inhabited by pagan
tribes. The products are palm-oil, palm-kernels, ivory, rubber, ebony, camwood, indigo, gums, hardwood, and hides. Cotton cloth, spirits, hardware, tobacco, gunpowder, implements, pottery, provisions, and brass and copper rod are the chief imports. A military force of 1,060 native troops is maintained. The number of Europeans in 1900 was 398. Custom-houses are established at the ports of Wari, Burutu, Akassa, Brass, New Calabar, Bony, Opobo, and Old Calabar. The British Government has advanced £45,000 for harbor improvements. The High Commissioner for Southern Nigeria is Sir R. D. L. Moor. The fetish-worshipping Aros were thoroughly subdued early in 1902 by a strong expedition. The majority of the chiefs made their submission without fighting, and markets were established in their towns protected by military posts. Those who resisted fought stubbornly, and inflicted considerable losses on the columns of native soldiers. Aro Caliva, the center of fetish worship for Southern Nigeria, was made a British post. The inhabitants were set to work building roads through the country.

The British took control of the Onitsha region of eastern Nigeria between 1903 and 1905. The British were met with resistance from the indigenous peoples, who feared losing their land and culture. The British established a series of forts and garrisons throughout the region, including at Onitsha and Owerri. The British also established a network of roads and railroads to facilitate their control over the region.

The British took control of the Onitsha region of eastern Nigeria between 1903 and 1905. The British were met with resistance from the indigenous peoples, who feared losing their land and culture. The British established a series of forts and garrisons throughout the region, including at Onitsha and Owerri. The British also established a network of roads and railroads to facilitate their control over the region.

experimental station. The natives barter rubber, groundnuts, and cacao. The German Cameroon Company has undertaken to develop 34,000 square miles in the interior. The revenue and expenditure for 1903 balance at 4,236,600 marks. The imperial contribution is 2,238,100 marks. The imports in 1899 amounted to 11,333,200 marks; exports to 4,840,500 marks, including rubber for 1,988,000 marks, palm-kernels for 1,265,000 marks, palm-oil for 850,000 marks, ivory for 604,000 marks, and cacao for 192,000 marks. The ports were visited by 66 vessels, of 81,991 tons. The German Government is carrying on experiments in the cultivation of cotton in both East Africa and West Africa, and has engaged American negroes as expert instructors to teach the natives. The traders who bartered European goods for palm-oil, palm-kernels, and rubber used to set an enormous price on the former, and thereby made much money. The planters who came to the laborers 8 marks a month and a dwelling. When German money got into circulation the wages would buy little clothing and other European articles, and therefore they established stores to furnish the laborers with what they could not get in those prevailing in Europe. Some of the trading firms established plantations, and through this circumstance there was a degree of accommodation. Still there has been much antagonism between the traders and the planters. The missionaries, who also carry on trade, have revived the attacks on the planters, whose enterprises they think ought to be replaced by independent cultivation by the natives. Wages have risen to 12 or 15 marks a month, but still the lot of the laborers is considered unsatisfactory and the colonial officials are accused of favoring the owners of the great plantations on the slopes of the Cameroons mountains and countenancing the oppression of the indigenous population. Domestic slavery in Togoland and Cameroon is being gradually abolished, children of slaves being free in the former protectorate and children of free in the latter, and children of half free persons entirely free. The bonds of the sale or exchange of house slaves are prohibited. The German planters have been most successful in raising cacao. The planters have colonies of negroes set up for their profit, but the result has been to work without any further rise in wages by methods described as patriarchal, though the friends of the blacks consider it a kind of slavery. A new railroad will be started by the railroad from Victoria to Lisoka. The Germans in the winter of 1901 undertook an expedition into Adamawa. They encountered the resistance of the inhabitants, and in consequence of this Lieut.-Col. Pavel, commanding the colonial troops, marched against the Bangwa, Bandeng, and Bafut tribes and reduced them to submission. Military stations were established at Buea and Banyo and at Garva on the Benue. In the capture of the Sultan of Banyo Lieut.-Col. Nolte was mortally wounded. From here an exploratory expedition was undertaken to Lake Chad. Hostilities again resulted, and in the end the whole of German Adamawa up to Lake Chad was brought under German rule. A new expedition to promote the commercial development of the country started in the summer from the mouth of the Niger, where the Germans established a base of supplies. The jealousy of German and French enterprises in the Togo and the idea that the Togolese formerly displayed has disappeared since the boundaries of the different spheres of interest have been sufficiently established, and each nation helps the others in extending commerce and civilization to Lake Chad. The Italian expedition was killed by the natives in the German territory before German authority was established there, and they crossed German territory to attack Fadiliah in British Bornu. A French post was established in the German sphere until the Germans occupied the country.

WEST INDIES. The important islands of the West Indies, now freed from European rule, are described elsewhere (see CUBA, HAITI, PORTO RICO, SANTO DOMINGO). The British colonies remain intact, but the right of self-government has been curtailed in several of them. Denmark is negotiating for the transfer of the Danish Antilles to the United States. The French colonies have suffered from a volcanic eruption which destroyed the chief town of Martinique.

British Colonies. The island of Jamaica has an area of 4,200 square miles and Turks and Caicos and smaller islands attached to Jamaica have an area of 224 square miles. The population of Jamaica is 745,104, of whom only 17,092 are whites. Kingston, the capital, has 46,542 inhabitants. There were 14,856 East Indians in the colony in 1899, of whom 1,683 were under indentures. The number of deaths and births was 31,259; of deaths, 16,880. There were 746 Government schools with 98,588 pupils on the rolls in 1900. There were 178,667 acres tilled in 1900 and 379,256 acres of hogsheads of sugar, 31,616 acres of coffee, 24,665 acres of bananas, 27,543 acres of coconut palms, 12,382 acres of corn, 430 acres of cacao, 1,815 acres of ground provisions, 85,416 acres of guinea grass, 15,103 acres of pasture, 353,588 acres of pasture and pimento, 25,620 acres of pimento, 172 acres. The Governor is Sir Augustus Hemming. The Legislative Council consists of the Governor, 5 official members, 10 nominated members, and 14 members elected for five years. The revenue for the year ending March 31, 1900, was £906,037, and expenditure £217,683. Of the revenue £340,617 came from customs. The principal expenditures were £111,700 for debt charges and £63,720 for police. The regular forces in Jamaica in 1900 numbered 1,739 officers and men. There were 12 ships of the British navy on the North American and West Indian station. The public debt of the colony, including guaranteed debts, amounted in 1900 to £3,824,782. The value of all imports in 1900 in London, £1,722,069; exports, £1,707,077. The imports of textiles were £167,302; of flour, £133,306; of rice, £44,745; of exports of sugar, £165,941; of rum, £132,124; of coffee, £38,485; of bananas, £619,636; of oranges, £118,473; of spices, £110,645; of woods, £117,096. The tonnage entered and cleared was 1,742,224 tons in 1900. The registered shipping of the colony comprised 145 sailing vessels, of 8,21 tons. There are 9 railroads having a total length of 185 miles; receipts in 1901 were £109,130, and expenses £36,482; the number of passengers carried was 381,468. There are 843 miles of telegraph lines and 154 miles of telephones. The number of telegrams sent in the year ending March 31, 1901, was 85,052; receipts £4,715; expenses £7,426. The post-office transmitted 5,238,083 letters and postal cards and 1,178,576 telegrams. Previous to 1889 the 14 elected members of the Legislative Council exceeded in number the official and nominated members. Sir David Barbour, who examined into the financial condition of the colony, recommended the appointment of additional members so as to give the Government a majority. When the elections of 1901 were held the elected members refused to act, but the Government carried through the measures deemed necessary for restoring the financial equilibrium, and then the additional
members were withdrawn. The Colonial Secre-
tary again asked in to resort to such a temporary expedient, directed the Govern-
or to appoint the 4 additional nominated members permanently with a right to vote on any question that the Governor pronounces to be of paramount importance. The representative members, thus stripped of their legislative powers, have ever since protested in the Council and have petitioned the British Government to restore the old Constitu-
tion. Mr. Chamberlain declines to sanction any change until existing conditions have had a fair trial and have by common consent been found wanting. No question has yet arisen in the Coun-
cil on which the elective members have been unan-
imous in their opposition to the Government ne-
ceessitating its being declared of paramount im-
portance by the Governor. The change in the Constitution secures government by white men, in
which the vast majority of the colored population acquiesce. Householders who pay £1 a year in
rates, alone qualified to vote, and only a part of the qualified do vote. In January, 1902, the elected members sent a petition to Mr. Chamberlain setting forth that the present system is inadequate and asking for a re-
turn to the system by which the representative members have a normal majority; in this event they would agree to an alteration in the order in Council providing that when the Governor de-
clares a matter to be of paramount importance the elected members shall not vote. The financial difficulties of the Government were acute in the budgeting for 1902. The situation was one of extreme depression, although the elements of prosperity were at work. Additional taxes were imposed to avert a deficit. These could not be collected, and the Government drew the con-
clusion that the limit of taxation had been reached.

An outbreak occurred at Montego, on the north side of the island. A mob overpowered the police and terrorized the town on April 5. On April 6 the police killed a citizen, after which a score of police-
men were badly injured and troops were sent for. The withdrawal of constitutional privileges by Mr. Chamberlain and the alteration of the inci-
cidence of taxation were the reasons given for the rioting, which was preceded by political meetings and meetings of the influential people of the island refused to pay the taxes, after which the Government repealed the obnoxious tax law after prosecuting many persons for non-pay-
ment. Riots occurred in many localities, such as Sandys and other places. Previous to and leading up to the outbreak of dissatisfaction the elected members of the Legislative Council proposed reductions in salaries and other expenditures to balance the budget. Acting-Gov. Olivier would not accept any of the proposed reductions, whereupon the elected members, believing their presence in the Council unwise, and not wishing to accept any responsibil-
ities for the estimates, decided to absent themselves until they were passed.

The Government passed a bill to guarantee loans for the erection of central sugar factories. Of the advance of £250,000 by the British Parlia-
ment to enable embarrassed West Indian sugar-
planters to continue cultivation and pay wages until the European sugar bounties are abolished in the fall of 1903, only £10,000 were assigned to Jamaica. Thrice this sum was applied for at the prescribed interest rate of 6 per cent. per annum, and the Legislative Council failed to advance the difference out of the island revenues. The fruit season of 1902 was good, and the Government rev-
ences and the trade of the island in the course of

the year showed a remarkable improvement. In
stead of a deficit of £170,000 for the fiscal year ending June 30, 1902, the tour-
ists from England and the United States brought much money into the island. There was an in-
crease of 89 per cent. in coffee exports, 39 per cent. in pimento, 36 per cent. in bananas, 54 per cent. in oranges, 47 per cent. in coconuts, and 19 per cent. in.
dywoods. The company which established a direct steamship line from Great Britain changed the distributing port for fruit from Bristol to Manchester, and placed the business in Jamaica in the hands of the American company that raises and exports bananas to the United States, the picking, sorting, and packing of fruit under the supervision of its own agents having been so im-
perfectly done that the losses on spoiled cargoes and unmarketable shipments cost the total profits on fruit to nothing. A reciprocity treaty was made between the United States and Jamaica, Turks, and Caicos Islands, and British Guiana.

Turks and Caicos Islands, having an area of 165 square miles, had in 1901 a population of 5,350, of whom 2,464 were males and 2,886 females. About 1,500,000 bushels of salt are exported every year to the United States. The Com-
missioner is William Douglas Young. The Cay-
man Islands in 1901 had 4,322 inhabitants, compris-
ing 1,904 males and 2,418 females. The Mo-
rant and Pedro Cays are also dependencies of
Jamaica. The imports of the Turks Islands in
1900 were valued at £29,564; exports, £24,584;
tonnage entered and cleared, 280,639 tons.

The Leeward Islands had a total area of 701
square miles, with 127,434 inhabitants in 1901. There were 114 Government schools in 1900, with 24,974 pupils. Sugar and molasses are still the principal products of the islands, though fruits and other products have been planted on some of them. The Governor is Henry Moore Jackson. The islands are divided administratively into the presidencies of Antigua, with Barbuda and Redondia; St. Kitts, with Nevis and Anguilla; Do-
minica, Montserrat, and the Virgin Islands. The Legislative Council consists of 8 nominated mem-
ers and 3 members of the local legislative councils of St. Kitts and Nevis, Antigua and Dominica. The elective element in the Legislatures of Antigua and Dominica was abolished in 1888, when the Imperial Government contributed money to aid those islands in their financial difficulties.

Antigua has an area of 108 square miles and Barbuda and Redonda a total of 62 square miles. The population of these islands declined from 36,819 in 1891 to 34,971 in 1901. St. John, in Antigua, the capital of the colony, had 9,282 inhabitants in 1901. Sugar and pineapples are the chief products. Steamers run to New York, Canadian ports, and England. The local revenue in 1900 was £42,652; expenditure, £40,435. The receipts from customs were £23,081. The value of imports in 1900 was £125,304; ex-
ports, £111,849. The tonnage entered and cleared was 451,592 tons. The debt of the island is £137,071.

The Virgin Islands have an area of 58 square miles, with 4,908 inhabitants in 1901, compared with 4,839 in 1891. Sugar and cotton are grown by the colored people, who own their small hold-
ings. The local revenue in 1900 was £22,137; ex-
penditure, £21,979; imports, £3,387; exports, £2,812; tonnage entered and cleared, 12,076.

St. Kitts is 63 square miles in extent, with 29,782 inhabitants in 1901, having declined from 30,876 in 1891. Nevis, 50 square miles in extent, declined in population from 13,087 to 12,774. An-
guillia, 35 square miles, increased in population from 3,996 to 3,860. Anguilla grows vegetables and produces salt.

The revenue of the presidency in 1800 was £209,904: expenditure, £43,064; debt, £73,350; imports, £138,635; exports, £108,753; tonnage entered and cleared, 252,213 tons.

Dominica has an area of 291 square miles. The population increased from 28,841 in 1891 to 28,804 in 1901. The products are Liberian coffee, fruits, cacao, limes, and sugar. The revenue in 1900 was £28,113; expenditure, £26,780; debt, £70,900; imports, £80,144; exports, £98,842; tonnage entered and cleared, 467,880 tons.

Montserrat has an area of 32 square miles. The population increased from 11,762 in 1891 to 12,215 in 1901. The products are coffee, sugar, cacao, arrowroot, and lime-juice. The revenue in 1900 was £26,804; expenditure, £29,597; debt, £11,400; customs receipts, £4,958; imports, £36,911; exports, £8,158; tonnage entered and cleared, 198,730 tons.

The imports of cotton goods into the Leeward Islands in 1900 were £84,677; of flour, £51,722; of fish, £90,503. The expenditure on public works was £27,225; on police, £10,451; debt charges, £10,451.

Trinidad has an area of 1,754 square miles. The population in 1901 was 253,230. Port of Spain, the capital, has 55,000 inhabitants. The dependent districts of Tobago has an area of 114 square miles and 18,750 inhabitants. The people of both islands are mostly of mixed blood. French, Spanish, Corsican, Venezuelan, Portuguese, and British blood have intermingled. Trinidad, at that time, was a British possession, and the negro slave population was once large. The present population comprises 89,178 Roman Catholics, 74,649 Anglicans, 26,771 other Christians, and about 78,000 East Indians. The number of marriages in 1900 was 1,081; of births, 10,021; of deaths, 8,441. The area under sugar-cane in 1900 was 1,500 acres; under cacao, 150,860 acres; under coffee, 3,960 acres; under ground provisions, 34,400 acres; under coconut-palms, 11,200 acres; in pasture, 15,000 acres. From the pitch lake in the center of Trinidad 158,750 tons of asphalt were exported in 1900. There are 49 miles of railroad and 690 miles of telegraphs. In Tobago, which is often visited by tourists from the United States and Great Britain, cotton and tobacco are cultivated. The sugar industry has been discouraged and repressed.

The revenue of Trinidad and Tobago for the year ending June 30, 1900, was £261,874, and expenditure £230,290. The revenue from customs was £231,841. The expenditure on public works was £37,501; on police, £46,706; debt charges, £50,623; amount of public debt, £918,473. The value of imports in 1900 was £25,500,538; exports, £2,348,424. The imports of flour were £126,270; of textile goods, £381,106; of rice, £11,714; of machinery and hardware, £154,744; exports of sugar, £352,292; of cacao, £979,672; of asphalt, £175,079; of hides, £108,931; of rubber, £203,101. The tonnage entered and cleared was 1,178,494 tons.

The Governor of Trinidad in 1902 was Sir Cornelius Alfred Moloney. The Legislative Council consists of 9 official and 11 appointed non-official members. Tobago was made a ward of Trinidad on Jan. 1, 1890.

The Windward Islands have a common Governor, Sir Robert Baxter Llewelyn, but each island has its Legislative Council, containing official members and nominated non-official members. Grenada has an area of 133 square miles, with 65,523 inhabitants. The island is 21 miles long and 9,529 square. Pimento, cacao, spices, coffee, and sugar are the chief products. The island of Carriacou, one of the Grenadines attached to Grenada, has a population of 6,000.

St. Vincent has an area of 132 square miles and 41,054 inhabitants, of whom 2,445 are whites. Kingstown, the capital, has 4,547 inhabitants. Sugar, rum, arrowroot, and spices are produced. The northern end of the island was devastated in 1902 by an eruption of La Soufrière and 1,800 people perished, while 6,000 were made destitute.

St. Lucia has an area of 223 square miles, with 49,865 inhabitants. The town of Castries has 7,910. The number of births in 1900 was 1,995; of deaths, 1,067. The main products are sugar, rum, logwood, and cacao.

The revenue of St. Lucia in 1900 was £70,105, of which customs produced £30,860; expenditure, £64,750; of which £7,047 went for public works, £19,177 for debt charges; public debt, £176,639; imports, £403,593, of which £30,291 represent cotton goods; exports, £210,881, of which £23,478 represent sugar and £28,247 cacao; tonnage entered and cleared, 1,841,593 tons.

The revenue of St. Vincent was £27,674, of which customs produced £15,032; expenditure, £36,121; of which £21,432 were spent on public works; debt, £14,470; imports, £98,561; exports, £100,327; tonnage entered and cleared, 286,712 tons.

The revenue of Grenada in 1900 was £70,363, of which £36,684 came from customs; expenditure, £62,718; of which public works took £31,169; public debt, £127,570; imports, £232,780; exports, £311,681, of which £290,831 represent cacao; tonnage entered and cleared, 439,000 tons.

Barbados has an area of 166 square miles and a population estimated at 185,000. The number of births in 1900 was 7,257; of deaths, 4,893. The Governor is Sir Frederick Mitchell Hodgson. There were 196 elementary schools with 13,706 pupils in 1900. There are about 30,000 acres in sugar, yielding 50,571 bagasse in 1900. The export of glance pitch in 1900 was 1,120 tons valued at £6,162. About 1,000 men and 250 boats are engaged in fishing, and the annual value of the catch is £21,700. The shipping of the colony in 1900 consisted of 49 miles of railroad and an aggregate tonnage of 6,788 tons. There are 24 miles of railroad and 635 miles of telephone-line. The revenue in 1900 was £185,475, of which £103,296 was spent on public works, £182,866, of which £22,712 were spent on police, £9,677 on public works, and £19,497 on debt charges. The amount of the debt was £416,830. The value of imports in 1900 was £2,145,252, of which £1,800,987 were for textiles, £67,223 for flour, £84,412 for rice, and £10,677 for fish. The exports were valued at £699,011, of which £599,706 represent sugar and £148,305 molasses. 

The Bahamas, consisting of 20 inhabited islands, besides many which are uninhabited, off the southeast coast of Florida, have an area of 4,450 square miles, with a population in 1901 of 53,735. The number of births in 1900 was 2,030; deaths, 1,234. There were 43 Government schools with 5,776 pupils enrolled. Pineapples, oranges, and grapes are grown for export and the cultivation of sial fiber is increasing. The area planted being 22,341 acres in the beginning of 1901. Sponges, shells, pearls, and ambergris are valued sea products.

The Governor in 1902 was Sir Gilbert T. Carter. The revenue in 1900 amounted to £78,800, of which £67,092 came from customs; expenditure, £29,227; 41 schools, with 1,111 pupils entered and cleared, £6,164 for debt, and £6,933 for police. The amount of the debt was £112,226. The value
of imports in 1900 was £335,269, of which £265,526 represent textiles and £29,264 flour; exports, £237,232, of which £104,219 represent sponges, and £133,013 meat and fish. Tonnage entered and cleared, 1,133,866 tons.

The revenues of all the British West Indian colonies in 1900 amounted to £2,133,955, against £1,969,861 in 1899 and £1,898,253 in 1898; expenditures amounted to £2,117,171, against £1,974,259 in 1899 and £1,904,369 in 1898. The imports of all the islands made the sum of £6,379, 647 in 1900, against £6,706,142 in 1899, and £6,323,413 in 1898; exports amounted to £2,360,344, against £2,629,454 in 1899 and £2,657,391 in 1898. The tonnage entered and cleared in all British West Indian ports was 9,910,300 tons in 1900, against 9,155,155 tons in 1899. As a result of the report of the Royal Commission appointed to inquire into the condition of the West Indian sugar-growing colonies, to the effect that the sugar industry was in danger of great reduction, and even of extinction in some islands from the competition of bounty-fed beet-sugar, and that its total or partial extinction would reduce the revenues so that in many cases they would be insufficient to meet the cost of administration, the British Parliament in 1899 authorized advances to the government of the British colonies amounting to £263,000, distributed as follows: Jamaica, £150,000 in aid of revenue and £203,000 for public works and railroads; Trinidad, £50,000 for roads and public works; Barbados, £50,000 as relief from the effects of the hurricane of 1898; St. Vincent, a hurricane loan of £25,000. Other assistance was given to the islands.

French Colonies.—The colony of Guadeloupe with its dependencies has an area of 688 square miles and a population in 1901 of 172,097. The 2 islands divided by a narrow channel which form the colony of Guadeloupe proper have an area of 383 square miles. The dependent islands are Marie Galante, Les Saints, Desirade, St. Barthélémy, and St. Martin. The population includes 15,276 East Indian coolies. A lyceum with 288 pupils and a female college with 134 pupils are the superior schools, and there are 101 elementary schools with 3,973 pupils. Pointe à Pitre, the principal town, has 16,506 inhabitants; Bassée Terre, the capital, 7,838. The revenue in 1900 was £1,620,581 francs, and expenditure £1,737,280 francs. The debt is 1,200,000 francs. The garrison consists of 170 French soldiers. The Governor in 1902 was M. Merlin. The members of the Legislative Council are elected by the people. Sugar was grown on 22,740 hectares in 1901, coffee on 5,251 hectares, cacao on 2,333 hectares. The exports of sugar in 1900 were 39,390 tons; coffee, 1,987,000 pounds; of cacao, 915,530 pounds. Bananas, sweet potatoes, manioc, corn, and vegetables are the food crops, and tobacco is raised for local consumption. The imports in 1899 were valued at 19,157,751 francs, of which 13,286,000 francs were special imports from France; exports at 18,707,558 francs, of which 11,622,000 francs were special exports to France. The imports from France for home consumption in 1900 were only 9,710,000 francs; exports to France, 10,559,000 francs. The number of vessels that visited Pointe à Pitre in 1899 was 438, of 291,300 tons mostly French and English steamers that make regular trips between European and West Indian ports.

The island of Martinique has an area of 380 square miles, with 180,000 inhabitants in 1901. There is an elective Legislative Council. The Governor in 1902 was L. Mouttet. The population includes 1,307 persons born in France, 4,065 East Indians, 432 Chinese, and 5,371 African immigrants. There is a law school with 17 students, 3 secondary schools with 745 pupils, a normal school, and 152 elementary schools with 11,986 pupils. The military force consists of 1,180 French soldiers. St. Pierre, the chief seaport, had 25,792 inhabitants in 1901; Fort de France, 17,274. Sugar, coffee, cacao, tobacco, and cotton are the chief products. The value of imports in 1900 was 24,929,548 francs, of which 10,720,063 francs came from France, 1,706,338 francs from French colonies, and 12,462,947 francs from foreign countries. The exports were valued at 27,161,800 francs, of which 24,735,093 francs went to France, 969,963 francs to French colonies, and 1,425,932 francs to foreign countries. The tonnage entered in 1899 was 318,500; cleared, 313,540. French, American, and British steamers visit the island regularly. The local revenue in 1900 was 5,729,793 francs; the expenditure of France in 1902 was 3,135,518 francs; debt, 1,490,000 francs and an annual remission of 30,000 francs. The eruptions of Mont Pelée in 1902 caused the death of 35,000 persons and left 50,000 homeless and destitute. The relief sent from the United States, France, and other European nations enabled the colony to survive the disaster. St. Pierre, which was effaced, was the largest town in the French islands and one of the prettiest in the West Indies. An area of 30 square miles was covered by the eruption. (See Earthquakes and Volcanoes.)

Dutch Colony.—The Netherlands has in the West Indies the colony of Curacoa, consisting of the island of that name, Bonaira, and the islands of St. Martin, St. Eustache, and Saba. Curacao, area 210 square miles, had 31,119 inhabitants on Dec. 31, 1899; Bonaire, area 95 square miles, had 4,726; Aruba, area 89 square miles, had 9,591; St. Martin, area 17 square miles, had 3,485; St. Eustache, area 7 square miles, had 1,383; Saba, area 5 square miles, had 2,189. The members of the Colonial Council are appointed. The Governor in 1902 was J. O. de Jong van Beek en Donk. There are 33 schools with 5,460 pupils. The revenue for 1901, derived from import and export duties, excises, land taxation, and indirect taxes, was estimated at 602,000 guilders and expenditure at 700,000 guilders. The Dutch garrison in 1900 consisted of 9 officers and 175 soldiers, the militia of 26 officers and 1,200 men in 1899, valued at 1,925,917 guilders. The chief products are corn, beans, cattle, salt, and lime. The ports were visited in 1899 by 2,455 vessels, of 480,585 tons.

Danish Colony.—The Danish Antilles are the islands of Santa Cruz, St. Thomas, and St. John, having a total area of 138 square miles and 30,504 inhabitants. The Governor in the beginning of 1902 was Col. C. E. von Hedemann. The value of imports in 1900 was 86,000 kroner; exports, 59,000 kroner. Sugar and rum are the chief products.

After long negotiations, a treaty for the sale of the islands to the United States was signed on Jan. 24, 1902. It was ratified by the United States Senate on Feb. 17, 1902. The Danish Landsting rejected the treaty on May 16. The United States proposed a prolongation of the period of ratification, and Denmark assented. Half the members of the Landsting were removed by election, and the treaty came before the body again and was once more rejected by a small majority on Oct. 22. In November the Government appointed a commission to go to the Danish West Indies in order to study what can be done.
for the economic development of the islands. Although they have cost the Danish Government $200,000 a year, the United States agreed to pay $5,000,000 for them.

**WEST VIRGINIA.** (See under United States.)

**WIRELESS TELEGRAPHY.** The continued development and improvement of wireless communication (see Annual for 1909) seemed peculiarly auspicious as we neared the commercial utilization of this great discovery, until in the latter part of 1901, and again in 1902, Guglielmo Marconi, who since 1897 has been most usually associated in the public mind with the subject, demonstrated by successful experiment the possibility of transatlantic telegraphy without wires.

In December, 1901, Mr. Marconi sailed for Newfoundland in order to conduct his first experiments in transatlantic wireless telegraphy, and set up his temporary station on Signal Hill, at the entrance of St. John's harbor. Previous to leaving England he had arranged with his operators at the Poldhu station, upon receiving instructions, to send out daily, from 3 to 6 P.M. Greenwich time or 11 A.M. St. John's time) the letter S of the Morse code (...) as a signal. Upon his arrival he at once sent up balloons and kites to which were attached the aerial electrodes of his receiving apparatus. At the beginning of the experiments his first balloon broke away, and afterward he used only the kites. One of these sent up Dec. 12 to a height of 400 feet remained there four hours. The signals were received from Poldhu and plainly distinguished, repeated at intervals, beginning at 12:30 P.M. and lasting irregularly for three minutes; resuming at 1:10, and resuming at 2:20 for shorter intervals, in all 25 times.

As soon as his success was announced the Anglo-American Cable Company, which holds a monopoly from the Newfoundland Government, declared that it would enforce its rights, and he was compelled to go elsewhere to establish a permanent station. He finally chose Table Head, a bleak promontory east of Glace Bay, Cape Breton Island, and upon the assurance of the cooperation of the Canadian and Nova Scotian governments at once began the erection of a station similar to that at Southport, Cape Cod, Mass., and later chosen for the plan of the new station at Poldhu. In general they consist of 4 square wooden towers, 28 feet across at the base, 9 to 11 feet across at the top, and 250 feet high. The towers stand at the corners of a square, whose sides are 210 feet long. Each one is cross-braced with steel-wire rope. Then all 4 are connected with each other by diagonal stays. Finally, to render the structure still more rigid and windproof, stout cables are run up over the tops of each pair of towers on all sides, and secured to anchorages in the earth. From each of the 4 horizontal bridges which connect the tops of the towers are suspended 50 copper cables. The cables are composed of 7 strands, an eighth of an inch in diameter, tightly twisted together. The reason for using many fine strands instead of a few large rods is to secure a larger amount of surface for a given amount of copper. It will thus be seen that the utilization of the vertical wire of the original Marconi experiments has now been enormously multiplied. Since the length of a wave is four times the length of the vertical wire, or antenna, waves from 800 feet (or a sixth of a mile) long should be developed. This corresponds to a frequency of about 1,100,000 a second. The 50 cables of each of the 4 groups converge a little as they go downward, and also incline slightly toward the center of the quadruplex edifice. The lower ends, therefore, are arranged along the sides of a square much smaller than that formed by their supports at the top, and terminate in the operating-room of the station.

The distance from St. John's to Poldhu is about 1,800 miles, and as the greatest distance, up to that time, that Marconi had succeeded in overcoming was about 90 miles, much doubt was expressed as to the success of these experiments. But even the most skeptical were convinced, when on Feb. 25, 1902, and the day following, Mr. Marconi, on board the steamship Philadelphia on his way to America, received worded messages, certified by the ship's officers, up to a distance of 1,515 miles and signals at a distance of 2,099 miles.

During the summer he continued his experiments, his most notable achievements being the exchanging of messages between Poldhu and the Italian cruiser Carlo Alberto, in the harbor of Cronstadt, Russia, in the presence of the Tsar and the King of Italy in July, a distance of about 1,400 miles; and between Poldhu and Spezzia, Italy, in September. The King of Italy not only bestowed upon Mr. Marconi many distinguished honors, but late in September granted him for six months, as a sign of respect for the Government, the cruiser Carlo Alberto for making wireless experiments. He arrived at the Cape Breton station, then nearing completion, Oct. 31. The cruiser was in constant communication with Poldhu during the voyage, and continued to receive messages after her arrival in Sydney, Cape Breton, harbor; however, she was unable with her apparatus to send messages farther than a few hundred miles. After installing the machinery and sending and receiving some experimental messages, on Dec. 21 the first official transatlantic wireless telegram was sent from Table Head. The messages were from Lord Minto, Governor-General of Canada, to King Edward VII of England, and from Mr. Marconi to King Edward and to King Victor Emmanuel of Italy, and from the commander of the Carlo Alberto to the King of Italy, with other minor messages.

Mr. Marconi left Sydney for Cape Cod Jan. 14, 1903, arriving at the South Wellfleet station Jan. 16, and on Jan. 18 sent direct from that station to Poldhu, a distance of 3,000 miles, a message from President Roosevelt to King Edward of England.

In place of the induction coils of his early apparatus, Mr. Marconi used in these experiments a transformer and a 40 horse-power, alternating current dynamo. The transformer raises the voltage from 2,000 to 20,000, and this is further increased by means of condensers to from 50,000 to 70,000 volts. For the coherer he has substituted a "magnetic detector," connected with a telephone receiver, which enables him to increase greatly the speed of receiving, and consequently of sending messages. To insure non-interference he employs the tuning system invented by Prof. Michael I. Popkin, of New York city, whose rights he purchased in 1901. There has been much discussion as to the integrity of Marconi's so-called inventions, and litigation is in progress over many of the patents claimed by the various companies interested in developing wireless telegraphy.

Marconi has now 35 or more stations in various parts of the world, or about 70, including those on ships. Of these, 12 land stations and 17 ships are fitted for sending commercial tele-
YACHTING IN 1902.

YACHTING IN 1902. The first conspicu-
ous yachting event of the season was unique and
of international and diplomatic import. It is
well known that the German Emperor long since
established a world-wide reputation as a cruis-
ing yachtman—that is, as one who loves to go
to sea for the pleasure of it and not merely for
the excitement of racing and of being the mere
owner of racing machines. For this reason he
was naturally attracted to the best type of sea-
going craft, and after sundry experiments with
cutters as developed under the English build-
ers he seemingly arrived at the conclusion that
schooners were best adapted to his purpose, and
therefore he became the owner of the famous
American yacht Yampa, which had distinguished
himself many times in races and proved her
sea-going capacity in many extended cruises.
But she was not quite large enough and sea-
worthy enough to meet the Emperor’s wishes, and
he consulted his designer, A. Cary Smith,
of New York, with a view to securing a more
suitable craft. Plans were drawn and submitted,
and as they received the Emperor’s approval the
work of construction was begun in 1901 at Shoot-
er’s island, near New York.

As the vessel approached completion, or per-
haps as the result of previously conceived plans,
the Emperor decided to make the occasion of the
launching an affair of state, and it was an-
nounced that his brother, Prince Henry of Prus-
sia, with the royal yacht Hohenzollern, would
be sent over to take part in the ceremonies
It presently transpired that correspondence of
a more personal nature had passed between Pres-
ident Roosevelt and the Emperor, and it was an-
nounced that Miss Alice Roosevelt would name
the yacht Meteor with the formalities usual on
such occasions. The vessel was completed and
rigged on time and launched on Feb. 25, under
what was truly a pageant of modern war craft.
As a tugboat captain, she suffered some slight damage. It was not serious enough,

however, to prevent her from proceeding almost
immediately to sea. A crew of English cutter-
men with an English sailing-master were brought
over to take charge of this Yankee schooner, and
she was successfully navigated across the ocean
and her interior fittings were completed under the
Emperor’s directions by English workmen. Since
that time there has been a deal of curiosity and
some criticism upon her performance during the
races in which she has taken part. Much of
this, however, has resulted from a misunderstanding
of her design. The order from the Emperor
was originally given was by letter in which the
words “cruising type” were twice underscored,
and this wish on the part of his Majesty was
emphasized on every occasion in which he ex-
pressed his personal interest in her. Having been the owner and practically master
of an American schooner, he must have acted
with full intelligence when he prescribed the
“cruising type.” The vessel was intended as an
improvement upon the Yampa, whose draft was
13 feet and 6 inches, while the Meteor’s was 15
feet, though the designers well knew that to
make a record in the racing events 20 feet draft
should have been given to her. Such a depth,
however, would have rendered her useless except
in the open sea, and in the opinion of her de-
signer this draft, though necessary for the great-
est speed, would have been a detriment to a sea-
boat.
The Iroquois, whose sea record is unsurpassed,
draws only 9 feet and 6 inches with a load water-
line of 90 feet, and her performance in riding
out the famous blizzard of 1888 is well remem-
bered; for she was strewn with the wrecks of
all kinds of vessels. Her performance last au-
tumn in winning the ocean race from Sandy Hook
to Cape May and return, goes to establish the
American theory that great draft in a sea
day is not a prime requisite. But without a
draft of 20, 30, and even 45 feet longer than
she on the water-line, and this in a reefing breeze
toward windward. All this seems to show that,
though fifteen years old, she is not yet on the retired list. The record of the Meteor is like that of all very large schooners when they are matched against smaller vessels with much larger sailplans, especially in smooth water and light air. When the Meteor is alongside a strong wind and something of a sea, she has shown what she can do by easily beating Sybarita, and breaking the record over the Queen's course at Cowes in three hours, fifty minutes, twenty-seven seconds. Moreover, letters have been received by the designer from his Majesty's representatives, expressing great satisfaction with the Meteor's performance, not only atCowes, but especially when there has been, as sailorsmen say, a "breeze o' wind."

It is constantly of record in all racing fleets that large schooners can be beaten by single-masted vessels in light air. Thus Corons has been beaten in the Goetz races at Newport in the open sea by the Ambarita and Elmina; the Corons is 85 feet long, the Ambarita 99 feet, and the Elmina 66 feet and 7 inches, lead water-line. It must also be remembered that American crews have no equals in the management of sailing schooners. Single-oar cutters are not at all trained to the situation, and their national conservatism is very much against their success in acquiring the art. With an American captain and crew, it is very probable that the Meteor would have established a different record. When we remember that in the matter of handling the Shamrock was far behind the Columbia, and that the pride of every Englishman is distinctively in cutter sailing, it is easy to see that in the handling of a schooner there must be special training both for the crew and for the sailing-master. Whoever has read about the historic performances of the old America, and of the New York Yacht Club of Cork. This was promptly accepted by the New York Yacht Club, and at this writing both vessels are well advanced for completion early in the coming season. The specified dimensions are 90 feet water-line, and cutter rig. The appointed dates for the races are Aug. 20, 22, and 25, and the following Thursdays, Saturdays, and Tuesdays, if necessary.

For the history of the International Races the reader is referred to the Annual Cyclopedia for 1901.

By common consent the series of races for the Canada cup, between the Royal Canadian Yacht Club of Toronto (defenders) and the Rochester (N. Y.) Yacht Club (challengers) was postponed for one year.

The international races for the Seawanhaka-Corinthian International Cup for small yachts, which trophy has been held by Canada since 1880, was held on Lake St. Lawrence near Montreal, on Aug. 7, 8, 9, and 11; the Trident of the Royal St. Lawrence Yacht Club was the defender, and the Tucumseh of the Bridgeport (Conn.) Yacht Club was the challenger. Four races were sailed, the Trident winning three and the Tucumseh one. Another series of races is in prospect for 1903, the challengers being the Manchester (Mass.) Yacht Club.

The annual, the winning boat was something of an innovation, though not to such an objectionable degree as atonetime. She was provided with two light budge-keels set at such an angle that the leeward one was nearly vertical when the boat heeled to her bearings. This arrangement reduced the draft to 4 feet, and left the middle of the cockpit free for "working ship." The Canadian centennial deserts first for having won this coveted international trophy from the best amateur sailors of the United States, and secondly for having so successively defended it during a series of years.

**YOUNG MEN'S CHRISTIAN ASSOCIATION.**

The reports of the Young Men's Christian Association for 1902 enumerate 1,575 associations in the United States and Canada, 105 with 224 members, showing an increase for the year of 99 associations and 54,744 members. The property owned by these associations was valued at $24,101,229. The British Year-Book for 1902 shows that in the United Kingdom, 1,533 centers with (approximately) 120,550 members and property valued in the total at £731,264; in the Colonies, 296 associations, with 32,941 members; and in foreign countries, 5,689 centers, with 467,230 members, and property valued at £4,824,090; making a total for the world of 7,507 centers with 620,721 members, and property aggregating £5,828,593 in value.

The first annual conference of the Young Men's Christian Associations met at Christiansia, Norway, Aug. 20 to 24. Grants toward paying the expenses of the convention had been made by the Storthing and the municipal authorities of the city. Twenty-one hundred delegates were enrolled, of whom 800 were official delegates, representing the United States, Canada, Great Britain, and Ireland, France, Germany, Holland, Belgium, Austria-Hungary, Spain, Portugal, Italy, Denmark, Norway, Sweden, Iceland, Russia, South Africa, Australia, New Zealand, India, and Japan. The English, German, French, and Norwegian languages were used in the proceedings. The European general secretaries reported having organized during America's cup as the result of the races of that year. Shortly after that event was decided, another challenge was received from Sir Thomas Lipton through the Royal Ulster Yacht Club of Cork. This was promptly accepted by the New York Yacht Club, and at this writing both vessels are well advanced for completion early in the coming season. The specified dimensions are 90 feet water-line, and cutter rig. The appointed dates for the races are Aug. 20, 22, and 25, and the following Thursdays, Saturdays, and Tuesdays, if necessary.

The Student Volunteer Missionary Movement.—The Student Volunteer Missionary Movement was begun in 1896 in connection with the work of the Young Men's Christian Association for the purpose of developing the interest and activity of students in institutions of learning in missionary enterprise. In 1902, according to a report made to the convention in Toronto, it had been introduced into 798 institutions, in more than half of which nothing had been done in behalf of foreign missions prior to its inception, and it had greatly stimulated interest in them since it existed. An educational department was instituted about 1874 for promoting the special study of missions. While at that time there were about 600 mission study courses in the United States and Canada, the report made to the
convention of 1909 mentioned 325 such classes with 4,797 students. It is intended to hold the general conventions of the Student Volunteers about every four years, so that the terms shall correspond with the ordinary length of a "college generation." A convention held at Chicago in 1891 was attended by 680 delegates, representing 151 institutions, the principal mission bands of North America, and most of the foreign mission fields. At the convention of 1898 in Detroit, Mich., 1,300 delegates from 294 institutions were present, and at the convention of 1899, in Cleveland, Ohio, out of 1,891 delegates, 1,588 were students and 119 professors representing 461 institutions of learning, the others representing mission boards and associations. At the convention of 1900, 1,000 delegates were present in a meeting held in London in 1900. The fourth general convention in America met in Toronto, Ontario, Febr. 27, 1900, and included 2,035 delegates from 22 countries, among whom 357 colleges were represented by 1,616 students and 121 members of faculty, 51 medical schools by 151 students, 20 theological seminaries by 29 professors, and 276 theological seminaries by 478 students and 65 teachers—2,596 students and 212 professors in all. Mr. John R. Mott, chairman of the Executive Committee of the movement, in his report of the convention, who had just returned from an official visit to the foreign mission-fields for the organization of the movement in them, spoke of its activity in Great Britain, Germany, France, Russia, Sweden, and Holland, and stated reasons why the missionary work should be prosecuted with the greatest energy. The addresses, delivered in general and sectional meetings, related to such subjects as the missionary education of the young, the systematic study of missions in Sunday-schooIs, the place of missionary study in colleges and theological schools, The Printed Page as a Missionary Force, the office of the pastor in promoting interest in missions, etc.

Mr. John R. Mott spoke of the need of the foreign evangelization movement in the non-Christian world; President E. F. Truslow, honorary secretary of the Church Missionary Society, of the increasing openings and opportunities for missionary effort as challenging the present generation of Christians; and Mr. Robert S. Speer, of the Presbytery of Foreign Missions, described The Abounding Resources of the Christian World. Nine sectional conferences were held for the consideration of matters relating to different parts of the mission-field, and 27 denominational conferences. About $15,000 were subscribed for carrying on the work of the movement for the next four years. A report was made that the names were known of 1,933 volunteers who had sailed, up to the present year, to enter the mission service, going out in connection with about 50 different societies and taking posts of labor on the non-Christian world; and that 60 per cent. more had gone out since the convention of 1898 at Cleveland, Ohio, than during the four years preceding. Of the 46 volunteers who had served as members of the Executive Committee, 27 had sailed and 9 others were under appointment or had applied for appointment.

At a conference of Young Men's Christian Associations of theological seminaries in the West, held in Dayton, Ohio, the preparation of a textbook was proposed for use in voluntary classes among theological students having especially in view the practical work of a missionary education in the work for individuals. The seminaries were urged to de-
majority as a Liberal and supporter of the Laurier Government. Major Z. T. Wood, of the mounted police, acted as Commissioner pending a definite appointment. Meanwhile, the other members of the Council were E. C. Senkler, Gold Commissioner; J. E. Girouard, Registrar; H. H. Newlands, Legal Adviser; C. A. Dugas, Judge; and Messrs. Wilson and Prudhomme, elected members. On Jan. 17 the Dominion Government received a petition from the Yukon Council making the following requests: 1, Representation in the Senate; 2, the addition of 5 elected members to the present Yukon Council; 3, the division of the territory into electoral districts and the setting apart of money for election purposes and members' traveling expenses; 4, control of the liquor traffic in the Yukon; 5, the nomination of an inland revenue officer in the Yukon; 6, the right to establish breweries; 7, the setting apart of a fund for the maintenance of schools; 8, the setting apart of a fund to maintain roads; 9, the right for the Yukon Council to adopt all ordinances relative to Yukon matters independently of the Ottawa Government, which, however, should retain the right of veto on Yukon statutes.

Railway and Trade.—The all-important question of railway rates was hastened toward a solution in 1902. In 1901, the Dominion Government, through its Railway Department, had fixed a tariff on the White Pass and Yukon Railway of about $18 a ton for fifth-class goods between Skagway and Whitehorse, but the company refused to accept this or the proposal that no overcharge should be made on the American end of the line to compensate for this Canadian reduction. Finally President S. H. Graves, of the railway, came out from England, met Mr. Tiffin, of the Government Railways, and, after negotiations accepted the following arrangement as to rates: Class 1, which at present is $2.85 per hundredweight, was reduced to $1.90 per hundredweight; class 2 was reduced from $2.84 to $1.66; class 3 from $2.83 to $1.42; class 4 from $2.80 to $1.20; class 5 from $2.75 to 85 cents; class 6 from $2.74 to 90 cents; class 7 from $2.73 to 75 cents; class 8 from $2.72 to 75 cents; class 9 from $2.71 to 73 cents; class 10 from $2.70 to 70 cents. Gov. Ross said that “about 60 percent of the goods going into Dawson was Canadian, and the percentage was steadily growing.” In a report to the Canadian Manufacturers' Association, made public in April, 1902, Mr. Tiffin gave the figures of Yukon trade in various years, ending June 30, as follow:

Financial Conditions.—It was expected that the assessment of Dawson for 1902 would fall substantially below that of the past year. The closing of the gambling-halls, the lowering of prices for building materials, and the springing up of several villages in the creeks promised such a result. But the returns finally received and giving the assessment figures for 1901 and 1902 showed very little difference. Realty, 1901, was assessed at $4,154,840; in 1902 at $4,145,090; personal property in 1901 was assessed at $8,285,700; in 1902 at $8,130,900; and in 1901 the total was assessed at $1,199,100; in 1902 at $956,550; the total in 1901 was $11,647,450; in 1902 it was $10,658,440.

The lower personal property valuation was accounted for by many shipments arriving in 1902 unusually late and after the assessment had been made. Further evidence that Dawson was well holding its own was found in the extent of the money orders. In October, 1902, orders to the value of $148,907 were sold. The Yukon has not been a charge on the Dominion, and its indirect value to Canada as a nation has been undoubtedly great.

The Federal Government appropriations for 1902 amounted to $102,090, which if it was estimated would be met by the revenue. Of this sum $178,500 was for roads, $25,000 for buildings, and $125,000 for postal service. In 1901 the revenue was $1,093,868, including $92,961 royalty in gold; $125,861 from free miners' certificate; $229,585 from various mining fees and leases; $88,297 from the sale of Government reserved claims; $74,894 from timber dues; $600,060 from customs duties: $108,572 from telegraphs. The expenditures were $1,671,086, including $30,548 on customs; $319,761 on salaries, surveys, and contingencies; $74,786 on justice; $488,052 on mounted police; $117,913 on postal service; $388,064 on public works; $215,576 on river improvements and maintenances of telegraph-lines and federal buildings.

Mining.—By official figures, the production of gold in the Yukon was $2,500,000 in 1897; $810,000 in 1898; $16,000,000 in 1899; $22,275,000 in 1900; $15,000,000 in 1901. The total since statistics were kept was $70,015,810. In April, 1902, Mr. R. G. McConnell, of the Dominion Geological Survey, published a report of explorations in the preceding summer, which, upon consideration of the whole, showed a very rapid decrease in production and resources. George E. Hees, of Toronto, paid the council a visit in the summer of 1902 and published impressions and statements which aroused considerable criticism. In Industrial Canada of August he wrote as follows: “Since 1897 hundreds and thousands of prospectors have been exploring and prospecting every creek and mountain in that country, and no new discovery of importance has been made for more than a year. I have permission from Mr. Senkler, Canadian Assistant Gold Commissioner, to use his name as saying the output of gold in the Klondike last year was over $24,000,000. The production of the coming year, according to the Government's estimate, will not exceed $14,000,000. The reason for this very large cent. of the gold already found is not known, but it can be stated with certainty that the finds are being worked up, and no new discoveries have been made for more than a year. The hope of the Klondike now is the discovery of gold-bearing quartz of the Wilkie class. So far no such quartz has been discovered.” Several authorities contradicted this.

In the summer of 1902 Mr. Morley Wickett, of Toronto, was appointed by the Canadian Manufacturers' Association to visit the Yukon and report upon its resources, conditions, and development. Summed up, his elaborate data may be given as follows: The gold-bearing sands are of immense area, and the camp will remain important for many years. While the yields are not so striking as in the early years, the cost of production has fallen fully 50 per cent. since 1898, and he pointed out the immense area yet to be prospected, but at the same time sounded the warning that geological investigations do not warrant the belief that another Eldorado will be found, and that public opinion has settled down to the belief that the rest of the country is largely made up of lower-grade gravel. Dawson City is in a state of transition between the old order and the new. Credit is no longer given promiscuously and consolidation is going on. If mining suffered no temporary relapse there should be no change in business conditions in the near future.
INDEX TO THE SEVEN VOLUMES OF THE THIRD SERIES.

1896-1902.

Abbe, Henry E., obit., 642.
Abbot, Frank W., obit., 405.
Abdulrahman Khan, vi, 4; vii, 478.
